It is evident, said Mr. Booth, that this proposal, if universally accepted, would provide a complete pension system, but it would not have this effect for 40 years. In order to bridge the interval, therefore, it is further proposed that the State should assist all persons over 25 at the time of the adoption of the scheme, provided that they either have already secured, or shall, within three years (being then under 50) secure, a deferred annuity. The annuitant, moreover, must have provided himself with a pension of not less than 6*l.* 10*s.* a year, and pay in a sum (according to age) of from 4*l.* to 10*l.* in order to establish a claim for an equivalent contribution from the State. The scheme contains no proposal for dealing with the cases of men already over 50. The foregoing regulations refer to men only; those for women are on a lower scale. Every woman under 25 is to deposit 30*s.*, and to this the State will add 8*l.* Her yearly payments will be 8*s.* 8*d.*, and her benefit a pension after 65 of 3*s.* a week. It is also to be allowable for any man to deposit 2*l.* 10*s.* in place of 5*l.*, and pay to 10*s.* in place of 20*s.* each year, if he forego the benefit offered to widow and children or any return in the event of death before 65. A clause is also inserted permitting subscription to friendly and provident societies to replace the stipulated annual payments to the pension fund. Mr. Booth, in commenting on this scheme, said: As about 480,000 men and women reached the age of 25 in 1891, the cost of pensioning them, at 15*l.* per male and 8*l.* per female, would be nearly 5,500,000*l.*, and if the effort to bridge the interval between the present time and 40 years hence were assumed all at once, it would involve an enormous liability, which, spread over the whole period of payment, would represent very heavy annual charge to the State in addition to what the individual insurers would pay for themselves.

(*c*) *Scheme of Mr. Fatkin.*

(v.) A third scheme mentioned by Mr. Booth[1] was that proposed by Mr. Fatkin, who suggested that advantage should be taken of the comparatively high rate interest at which municipalities borrowed, for the establishment of a system of municipal banking, which, by the excellence of the return guaranteed to depositors, would encourage thrift. This proposal, however, Mr. Booth did not make the subject of special comment.

(*d*) *Scheme of Mr. Vallance.*

(vi.) The last scheme criticised by Mr. Booth[1] was that drawn up by Mr. Vallance, who, like Mr. Fatkin, desired to encourage thrift independently of State aid. He suggested that weekly wage earners should be induced to put by a small sum—1½*d.* or 3*d.* in the £ on their wages—by the imposition upon their employers of a legal obligation to add a similar sum. The contribution of the workman, with compound interest, was to be withdrawable by him at any time, but the contribution of the employer, and its accumulations, were to be payable only at death, if happening before 65, or to be commuted into a pension together with the workman's own deposits, if these had not been withdrawn previously. Mr. Booth pointed out, however, that all schemes involving a legal claim on employers were objectionable, because the burden of the employers' contributions must ultimately fall upon the wages.

(*d*) *Scheme of Mr. Booth.*

(vii.) In fact, after examining all the schemes at present before the public, Mr. Booth[1] had come to the following conclusion:—That to be effectual, any system whereby men are encouraged to contribute during their youth to their support when they are old must be universal, or else the improvident will still trust to the rates, and that to be universal it must be compulsory. Now, any compulsory method of contribution, universally enforced, is a form of taxation, and Mr. Booth accordingly proposed that every man and woman should be entitled to a pension of 5*s.* per week at the age of 65, to be paid two thirds out of taxes and one third out of the rates. There are at present, he said, about 1,323,000 persons over 65 in England and Wales. At 5*s.* per week each, a universal pension list would reach 17,000,000*l.* Putting, therefore, the total national income at 1,000,000,000*l.* per annum, and assuming that taxation falls, or can be arranged to fall, in true proportion to income, in order to maintain such a pension scheme, everyone would have to pay about 1¾ per cent. of his income. Mr. Booth was quite ready to admit that, under this scheme, the rich would pay much more in proportion to what they received than would the poor, and that the long lived would exist on the saving of the short, but he contended that the saving to the ratepayers, especially in respect of outdoor relief, would be very great, and that it would simplify the whole problem of poverty to so large an extent that it was worth while to consider whether these financial difficulties could not be overcome.

[§ 569 (vii.)]

(viii.) Mr. Loch[1] opposed all these schemes alike, on the following grounds. First, that the recognition of the principle that a large portion of the population have a right to public maintenance, irrespectively of destitution, is in itself an evil. Secondly, that the pauperisation of all persons of 65 and upwards would involve a great economic loss, inasmuch as many persons of that age are still able to work. Thirdly, that the direct cost would be enormous. And, finally, that there is no ground for supposing that thrift would be encouraged. Poor law reform, he urged, and improved administration, is the true line of progress in the matter. Pauperism is an evil to be prevented rather than cured. The unsatisfactory physical condition of children is a great cause of pauperism in later life. Great pains should, therefore, be bestowed upon the proper physical training of the young. In his criticism of old age pension schemes, Mr. Loch was supported by Mr. Giffen,[2] who stated that a scheme of State insurance, whether against accidents or for old age pensions, would involve a very large extension of State officialism and expenditure in pursuit of an object less useful than many others towards which they have hitherto been directed, such as national education, or towards which they might be directed, such as the control and endowment of the public hospitals.

Old age pension schemes criticised.

8. FUNCTIONS OF THE LABOUR DEPARTMENT.

570. The Commission had not completed its sittings for the purpose of taking evidence before the new Labour Department was formed. Several of the witnesses, however, had previously expressed a wish that such a step should be taken, and stated the functions which, in their opinion, the newly created office ought to discharge. It will appear from the following paragraphs that some of their suggestions have been carried out, while others remain unadopted.

The new Labour Department.

571. Many of the witnesses urged the advisability of effecting some improvement in the publication by the Government of industrial statistics. Evidence to this effect was given by Mr. Ben Tillett,[3] of the Dockers' Union; Mr. J. Morrison,[4] of the Shipping Federation; Mr. R. S. Macnamara,[5] of the Cork United Building Trades' Society; Mr. T. W. Bushill,[6] of the firm of Messrs. Bushill and Sons, Coventry; Mr. S. Webb,[7] and Mr. Tom Mann.[8] These statistics, it was urged, should include full information as to cost of production, the condition of the labour market, and the cost of strikes, and should be accompanied with full reports of the causes, origin, development, and effects of every strike and lock-out, the results of such experiments as profit-sharing, and every important industrial change. All this information should be published in a journal rather than in a Blue Book, at fixed intervals, and a popular price. More specific evidence to a similar effect was given by Messrs. W. J. Williams and W. J. Parry, of the North Wales Quarrymen's Union, and by Mr. W. Small, of the Blantyre Miners' Association. Mr. W. J. Williams [9] said the information obtainable from Government returns on the subject of quarrying is more incomplete than that supplied in connexion with any other trade in the kingdom. Every employer ought to supply particulars as to the number of persons employed, the number of slates and slabs manufactured, and their price. And Mr. Parry[10]: There is a great deal of dissatisfaction among the quarrymen of North Wales because the statistics that used to be supplied to the Government have ceased to be published with the inspectors' reports. Mr. Small,[11] moreover, desired more definite and precise information relating to mining to be published in the official Blue Books.

Its proposed statistical functions.

572. These proposals are, to some extent, in process of being carried out through the medium of the "Labour Gazette" [12]. In addition to publishing this journal, the new department continues to issue, in Blue Book form, the annual, periodical, and special reports which it used to prepare as a section of the Board of Trade before it was placed in its present quasi-independent position. These reports, Mr. Giffen [13] stated, were first issued in consequence of a resolution passed by the House of Commons, in

How far they are already being discharged.

[12] Memorandum on the Progress of the Work of the Labour Department. [13] Digest, Whole Commission, p. 42.

§ 572.]

1886. The work done in this direction, he said, may be classified under three principal heads. First, the compilation and publication of the wages statistics of the leading industries of the country; secondly, the compilation and publication of annual and periodical returns relating to trades unions, strikes and lock-outs, and alien immigration; and, thirdly, the compilation and publication of special reports on various topics, such as sweating in the East End of London, profit-sharing, the cost of living, &c.

proposed inistra- ctions.

573. But the Labour Department undertakes no administrative function whatever. The proposals, therefore, made by the witnesses with reference to functions of this sort remain unadopted. Such proposals were: 1st, that the department should act as a labour exchange; 2nd, that it should assume the administration of the laws relating to mines and factories, and, 3rd, that it should arbitrate in trade disputes.

act as a bour change.

574. The first proposal has already been referred to in paragraph 566, viii., relating to the affiliation of labour bureaux. It was put very prominently forward by Mr. Ben Tillett (1), who wished labour bureaux to be established in every town and every country district, to be put under the immediate control of the local authority and federated under the department, which would thus act as a clearing house of labour and prevent the labour market from being locally congested. Proposals substantially similar were made by Mr. G. Kilpack,(2) of the Affiliated Society of London and Suburban House Painters; Mr. G. W. Greenman, of the London Domestic Servants' Union(3); and, as has already been noticed in paragraph 565, by Messrs. Scammell, Gardener, Smyth, and Tozer, whose evidence mainly related to the labour bureaux system here propounded.

o adminis- r the ines and actory cts.

575. The second proposal was made most definitely by Mr. Webb,(4) who said that the department ought to be formed by amalgamating the existing Labour Department of the Board of Trade with the Factory and Mining Sections of the Home Office. The head of the department, he added, might or might not be a new Minister. Mr. Small,(5) however, was of opinion that there ought to be a Minister of Mines, and Mr. J. Henderson,(6) Her Majesty's Inspector of Factories for Scotland, stated that there ought to be a Minister of Mines and Manufactures, while Messrs. Ben Tillett(7) and Macnamara,(8) representing the Dockers' Union and the United Cork Building Trades' Society respectively, expressed their opinion that the Labour Department should be placed under the immediate control of a separate responsible Minister. Mr. Ben Tillett(9), further suggested that the Labour Department should be obliged to confer with the Parliamentary Committee of the Trade Union Congress as to amendments to the Factory Acts, which Acts he apparently assumed it would have to administer. Mr. Scammell,(10) moreover, suggested that, besides acting as a central labour exchange, the new department should be affiliated with the Factory and the Emigrants' Information Departments.

o arbitrate n trade isputes.

576. The third proposal, that, namely, to the effect that the new department should arbitrate in trade disputes was made by Messrs. Ben Tillett,(11) Macnamara,(12) Webb,(13) and Mann.(14) The two former, indeed, desired it to definitely issue awards, which the parties should be bound to obey, but Mr. Webb wished it merely to conduct inquests into the causes of disputes and to publish the result, while Mr. Mann advocated a middle course. The evidence of the last mentioned witness on this point was as follows:—Joint committees of employers and employed, he said, should be established. If they failed to agree, appeal should be made to voluntary boards of conciliation established in connexion with various trades and districts. Inasmuch, however, as these boards either fail to effect a settlement or are not formed at all, there should be in the background a central board of mediation established for the whole country in connexion with the Labour Department. This board should be composed of six persons elected by the trades unions and six by the associations of employers, with a government official to act as umpire. In order to encourage settlement between the parties as much as possible, this board should not be authorised to interfere, even if appealed to by the parties, until an outbreak actually took place. Then, on receipt of an invitation from either side, it should arbitrate, but there are practical difficulties in the way of giving it power to enforce awards. If no appeal was made, it should wait for a fortnight, and then should investigate the matter on its own responsibility, publish facts, and issue, as mediator, a recommendation as to the lines on which the quarrel should be composed, trusting to public opinion to secure the recommendation being carried out. The board should act as arbitrator only when appealed to, and only on condition of work being resumed on the original terms pending settlement. [§ 576.]

Other proposed functions not yet discharged.

577. In addition to these administrative proposals, one suggestion relating to the statistical functions of the department has failed to secure adoption. That was that the department should accompany its reports with forecasts as to imminent fluctuations in trade. This proposal was put prominently forward by Messrs. Mann(1) and Webb,(2) but it was subsequently pointed out by Mr. Giffen(3) that to publish inaccurate forecasts would be worse than useless, and that even approximate accuracy could never be guaranteed, because men capable of preparing even tolerably correct forecasts of the kind would not consent to work in a Government office, but would go to the Stock Exchange, where they would be certain to make large fortunes. Another proposal not yet adopted was that made by Mrs. A. Hicks, of the London Ropemakers' Union, and Mr. W. J. Parry, of the North Wales Quarrymen's Union, relating to the compulsory supply of returns of wages. Mrs. Hicks,(4) said: It should be made compulsory on employers under the Factory Acts to furnish a balance sheet to Government, to be used as indicating what wages they could afford. She was careful to point out, however, that this proposal was not associated with a demand for the establishment of a legal minimum rate of wages. Mr. Parry,(5) moreover, contended that individual employers should be under an obligation with regard to the supply of returns to Government, somewhat similar to that laid upon limited liability companies. Such returns, he considered, should always include the total make of slates in tons and value, the number of men employed, the wages paid, and the other expenses of working. The value of such returns, he added, was fully demonstrated by those that appeared in the annual reports issued by the bureaux of industries and the bureaux of labour statistics in Canada and the United States. This proposal has not been adopted by the department, indeed its adoption would involve the exercise of administrative power which the department does not possess. The same objection applies to the last following series of proposals made by Mr. Morrison,(6) of the Tyne and Blyth District Committee of the Shipping Federation. He said: There should be a Government department collecting and publishing trustworthy statistics relative to the origin, development, and effects of strikes. To the schedule of questions addressed by Mr. Burnett to officials of trade unions, there should be added:—

1. Give a brief but succinct account of the efforts (if any) that were put forth by the union, to obviate or prevent strikes.

2. How many of the men affected actually voted in favour of the strike, and was the vote taken by ballot or otherwise.

A similar set of questions should be addressed to employers concerned, and the answers of both parties should be published side by side. It would, moreover, be well to make it compulsory (under a penalty) on the part of trade union secretaries and employers to send in accurate information.

The Labour Department of the United States.*

578. Before the department was formed, the Commission had received a full account of the working of the Labour Department of the United States from one of its statistical experts, Dr. Elgin R. L. Gould.(7) His evidence was to the following effect:—In connexion with the Federal Government of the United States, he explained, there are six Cabinet offices or departments, and under each department there are grouped different bureau, having different functions. The Department of Labour was originally created in 1885 as a bureau under the Department of the Interior, but, in 1888, it was placed into an independent position, though without being raised to the dignity of a Cabinet office. By this arrangement, the Commissioner of Labour, as the chief of the department is called, has the double advantage of being responsible directly to the President of the United States and of being at the same time independent of the vicissitudes of party warfare for continuing in office. By the law of 1885, the functions of the department were set forth as follows:—"There shall "be at the seat of Government a Department of "Labour. The general duties of the Commissioner of "labour are to acquire and diffuse amongst the people "of the United States useful information on subjects

[§ 578.] "connected with labour, in the most general and "comprehensive sense of that word, and especially "upon its relation to capital, the hours of labour, "the earnings of labouring men and women, and the "means of promoting their material, social, intellectual, "and moral prosperity." The same law goes on to specifically oblige the Commissioner to issue a report every year, but leaves him to choose its subject. He is also permitted to issue additional reports on his own responsibility, such as the report on the Scandinavian Liquor Legislation, upon which the witness is at present engaged; but, with this exception, the only special reports yet issued have been drawn up at the invitation of Congress. In conducting its inquiries, the department keeps in view the following principles: First, to collect all information at first hand, through the personal investigation of one of its own accredited agents; secondly, to procure for this purpose the services of skilled experts, who, previously to conducting their inquiries, shall have set themselves to study the subjects which they are about to investigate, with a view to ascertaining what information is required and what information it is possible to obtain; thirdly, to avoid making specific recommendations, but simply to publish the facts, and leave the public and the persons interested to draw their own conclusions. The first annual report issued by the department was on the subject of industrial depressions. It was a study of the various commercial and industrial crises from 1815 to 1885. The second annual report was on convict labour. It was the result of an inquiry into the effects of the different systems of employing prisoners practised in different States. The third report was on strikes and lock-outs for the five years 1881–6. The fourth was on the social condition of working women in the larger cities. The fifth was on railway labour. And the sixth, published nine or ten months ago, was on the cost of production in the iron and steel industries. In addition to these annual reports on subjects chosen by the Commissioner of Labour, Congress has twice ordered the department to conduct special investigations, the first on marriage and divorce statistics in the United States for the 20 years ending in 1887, and the second, the result of which is shortly to be published, on the progress of manual training and trade organisation in the United States and Europe. For the financial year 1891–92, the permanent staff of the department consisted of 75 persons, 55 of whom formed what may be called the interior, and 20 what may be called the exterior staff, the latter consisting of special agents employed outside the office. The appropriation for the same year, exclusive of the bill for printing the annual reports, for which a special appropriation is made in proportion to the bulk of the volumes issued, was 168,720 dollars or about 33,600*l*. Of this sum, 101,020 dollars were expended in salaries to the permanent staff, 47,500 dollars in travelling and subsistence allowances and in the salaries of temporary employés, 5,000 dollars in rent, 1,000 in stationery, 250 in postage to foreign countries, 8,000 in extra printing, bookbinding, &c.; 1,000 on the library, and 4,000 in miscellaneous items, such as furniture, advertising, telegraphs and telephones, expressage, fuel, lighting, &c. When Congress orders the department to conduct special inquiries, it makes special appropriations to meet the expenses connected with them. 22,500 dollars have been so appropriated in connexion with the two special inquiries already made by order of Congress. The United States Department has been the means of substituting inquiry by a skilled permanent body for inquiry by committees of the Legislature, much to the general advantage. It has provided the country with a body of trustworthy statistical information, in the absence of which the people would be certain to use statistics that were not trustworthy. In addition to the Labour Department of the Federal Government, labour bureaux have been established in 27 of the States. Of these, the oldest is that constituted in the State of Massachusetts in 1869. In 16 states, viz., California, Connecticut, Indiana, Iowa, Kansas, Maryland, Massachusetts, Michigan, Nebraska, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Dakota and Utah, the functions of the labour bureaux, like those of the United States Department, are purely statistical. In seven, viz., Illinois, Maine, Minnesota, Missouri, Rhode Island, Tennessee and Wisconsin, the control of mine and factory inspection is added. In two, viz., Idaho and Mexico, certain duties in regard to emigrants are assigned. And in two, viz., Colorado and North Dakota, the Commissioner of Labour is obliged to intervene on the petition of 15 of the workmen in the event of a strike taking place at a firm employing 25 or more hands. The State bureaux follow the same principles of conducting their inquiries as the United States Department, as far as their means allow, but, in many cases, they cannot afford to send out agents to collect information at first hand. Unfortunately, too, the Labour Commissioner's tenure of office depends, in many of the States, upon the continuance of a particular political party in power. There is absolutely no organic relation between the State bureau *inter se* or between them and the United States Department, and, owing to the strength of the sentiment of State autonomy, it would be impossible to institute any such relation. Up to the present time, the United States Department has not called upon the State bureaux to supply it with information, but the State bureaux have made such communications to each other, and every year a convention is held of the various labour commissioners of the various States in order to discuss matter of common interest. All the State bureaux originated in response to the distinctly expressed wishes of the principal labour organisations, each of which has a legislative committee formed for the purpose of urging the passage through the State Legislatures of enactments in which it is interested. These committees have always bestowed part of their efforts upon securing liberal appropriation for the labour bureaux. The United States Department, reporting to the Federal Government, does not make recommendations as to labour legislation, &c., because to do so would be considered an infringement of the prerogatives of the separate States, to which the formation and administration of industrial codes, except in relation to employés of the Federal Government, solely belong. But it is clearly within the province of the State bureaux, reporting to the State Government to do so, and they frequently do exercise this function.

Deductions from American experience

579. Speaking from his experience in connexion with the American Department, Dr. Gould(1) stated that he thought it would, in all cases, be better to confine the functions of labour departments, wherever established, to the compilation of statistics. In exceptional cases, he admitted, it might be advisable for the head of such a department to intervene in a dispute, but he should always be allowed to use his own discretion in so doing, and should not be fettered with any legal obligation in the matter. In no circumstances, moreover, should he be empowered to issue an award. His interference should be limited, as is the case in Colorado and North Dakota, to the task of mediation, that is to say, to the work of a peacemaker, without power of adjudication. A parliamentary chief of a labour department might—so Dr. Gould considered—utilise his power as arbitrator, if such power were conferred upon him, for the benefit of the class that possessed the greatest influence with the political party for the time being in power.

B. ORGANISATIONS.

1. ORGANISATIONS OF EMPLOYERS.

Organisations of employers compared with the men's trade unions.

580. It appeared from the evidence given by Mr. Brabrook,(1) the chief registrar of friendly societies, that employers' associations fell within the legal definition of a trade union, and could claim registration accordingly. Mr. Allan,(2) of the firm of Messrs. Allan and Company, marine engine builders, Sunderland, pointed out that these associations to a large extent lacked the identity of interest that the men's trade unions possessed.

Attitude of co-operative societies towards.

581. Mr. Hardern(3) stated that the Oldham Co-operative Managers belonged to the same association as the private employers in the district, and so had to combat a strike that occurred in 1885; but Mr. Maxwell(4) said that the Scotch Co-operative Wholesale Society had persistently refused to join the Employers' Association, and added that to do so would, in his opinion, be to give the lie to all its professions.

Chambers of Commerce and industrial arbitration, &c.

582. With the exception of the information given by Messrs. Scammell(2) and Boulton(3) as to the policy of certain chambers of commerce in regard to a national labour bureau and arbitration boards respectively, no further evidence was given on the subject of the present section. And, the evidence of the two witnesses in question is dealt with in the paragraphs devoted to the Unemployed, the Labour Department, and Conciliation, Arbitration, and Mediation.

2. ORGANISATIONS OF EMPLOYED.

Organisations of employed Divisions

583. The evidence given under this head related to friendly societies, building societies, co-operative societies, and trades unions. They all come under the jurisdiction of the chief registrar of friendly societies in virtue of the

(1) Digest, p. 37. (2) Digest, p. 23. (3) Digest, p. 14. (4) Digest, p. 11.

(1) Digest, Whole Commission, p. 42. (2) Digest, p. 29. (3) Digest, p. 31 *et seq.*

[§ 583.] Acts of Parliament applying to each group of them respectively. Mr. Brabrook,(1) who is the present holder of the office, quoted with approval the opinion expressed in 1874 by his predecessor, Mr. Ludlow, who was also examined, to the effect that it would be advisable to include them all under the general enactment that afterwards became the Friendly Societies Act, 1875, but this opinion has not been adopted by the Legislature, so that, for administrative purposes, working men's societies remain divided in the manner here indicated.

Financial position of.

584. Before proceeding to deal separately with each of these groups, Mr. Brabrook(2) gave the following figures relating to their finances.* In 1892, the funds of the societies registered as friendly societies in the United Kingdom amounted to 26,003,061*l.*; the funds of building societies, excluding the Birkbeck Society, which is registered under a separate Act from the rest, to 51,546,007*l.*; the funds of co-operative societies, under the Industrial and Provident Societies Act, 18,915,793*l.*; and the funds of trades unions, including some unregistered organisations, to 1,515,319*l.*; making a total of 97,980,180*l.* out of an aggregate estimated working class capital of 220,863,346*l.*†

Friendly societies: classes of.

585. Friendly societies,(3) or societies registered under the Friendly Societies Act, include the following:—Independent societies, affiliated orders, dividing societies, mutual insurance societies in connection with employers, societies in connexion with particular trades, and collecting societies. In addition to these friendly societies proper, certain other organisations, viz., benevolent societies, working men's mutual improvement societies, and societies especially authorised by the Secretary of State under section 8, sub-section 5, of the Friendly Societies Act, are admitted to registration as friendly societies.

Independent friendly societies.

586. To take each of these organisations in order: The independent friendly societies(4) are purely local, and devoted to raising, by subscription, funds for subsequent distribution in mutual relief, and maintenance during old age and sickness. The average contribution per member is about 20*s.* per annum. Their aggregate income for 1890 was 2,117,000*l.*, and expenditure 1,791,000*l.*, leaving a balance of 326,000*l.* They are, to a certain extent, self-supporting, but are sometimes aided by the contributions of honorary members, such as the employers and the clergy. They are not increasing in number, inasmuch as the new registrations do not keep pace with the dissolutions, and they are, generally speaking, giving way in point of popularity to the branches of affiliated orders.

Friendly societies with branches, or affiliated orders.

587. These affiliated orders may be defined(5) as societies having branches. Of these, the two most important are the Ancient Order of Foresters, which has 830,720 members, and the Independent Order of Oddfellows, Manchester Unity, which has 769,503. The total membership of all the affiliated orders making returns was 1,727,809, representing 16,400 branches, but both these figures require considerable additions in consequence of the transfer of societies, previously independent, to the associations. The average contribution per member is 31*s.* per annum, *i.e.* 27*s.* for benefit and 4*s.* for management, and the aggregate receipts for 1890 amounted to 3,555,000*l.* Both a central fund and branch funds are essential to the legal existence of a society with branches. But the law requires nothing further, and there is observable in the constitutions of the various societies every degree of centralisation within the prescribed limits. Thus, there are some societies in which the central body provides all the benefits and the branches are only allowed to reserve to themselves a fund sufficient to defray the expenses of the local management, and there are other societies where the branches provide all the benefits, and only contribute to the central body a sum that barely suffices to keep the central office open. The legal requirement as to a central fund has caused a great advance in the direction of centralisation, but at present every branch remains as financially independent in respect of its liabilities as if it were an independent society. A distressed branch has no sort of legal claim on the funds either of other branches or of the central body. The popularity of affiliated orders is largely due to the fact that members moving from place to place can get their accounts transferred from one branch to another.

Dividing friendly societies.

588. Dividing societies(6) are those in which the funds are, with the exception of a small sum, divided periodically. Their object is to provide sick pay and death allowances in consideration of a weekly subscription. They are also called "benefit societies," "slate clubs," and "tontines,"* the last title being derived from the fact that the sum remaining at the end of the year, after all claims for sick pay and death allowance have been met, is divided among the survivors. [§ 588.]

Friendly societies in connection with particular firms.

589. Passing over the evidence relating to mutual insurance societies in connection with employers, which has already been summarised under Accident Funds and Employers' Liability, we come to societies in connexion with particular firms,(1) but not supported by employers. These societies are, for the most part, of the nature of dividing societies, and are to a very large extent unregistered, owing to the expense and trouble entailed by the requirements of the Act with regard to the printing of rules and the making of periodical returns by registered bodies. It was the opinion of Mr. Brabrook, from whose evidence the information here given is derived, that, when the Act came to be reconsidered, it would be advisable to curtail these formalities as much as possible.

Friendly societies in connection with particular trades.

590. Societies in connection with particular trades,(2) *e.g.*, the stationers', the gardeners', and the farriers' societies, are distinguished from trades unions in that their object is not connected with the relations between employers and employed. They are partly supported by donations from outsiders.

Collecting friendly societies.

591. The collecting societies (3) are concerned almost exclusively with providing funeral benefits out of subscriptions collected from members. The 3,318,942 members, which 35 of them contain, were for the most part admitted in infancy. The fact that the accumulated funds of the societies are only 2,289,858*l.*, or 13*s.* 11*d.* per member, whereas those of other† friendly societies amount to 21,410,563*l.*, or 5*l.* 10*s.* 11*d.*, per member, shows that they stand on quite a separate footing, and, in the opinion of Mr. Brabrook, they should therefore be dealt with in a separate Act of Parliament. It is to them that section 30 of the Friendly Societies Act applies.

Benevolent societies.

592. Turning from friendly societies proper to other societies eligible for registration under the same Act, we come to benevolent societies,(4) a group of organisations including all those that do not limit the benefits they offer to such persons as have subscribed to their funds.

Working men's mutual improvement societies.

593. Working men's clubs(5) "for the purpose of social "intercourse, mutual helpfulness, mental and moral "improvement, and rational recreation," are also permitted by section 8, sub-section 4, of the Friendly Societies' Act, to be registered under it. But, in the opinion of Mr. Brabrook, such ought not to be the case, inasmuch as they provide no sort of insurance, the essential function of a friendly society, and often have a strongly defined political bias. Clubs avowedly political in their aims cannot be registered. Registration is valued, however, as enabling the clubs to get security for their funds and power to hold land and houses through trustees acting in their name.

Societies specially authorised for registration under the Friendly Societies Act.

594. Societies specially authorised(6) by the Secretary of State to become registered are those formed for the purpose of providing relief to members out of employment. Several of the societies in this group provide, in addition, the benefits of a friendly society proper, but they do so at a disadvantage, because they have to fulfil all the responsibilities without possessing any of the privileges which ordinary friendly societies possess, in respect of exemption from stamp duty and a preferential claim on the estates of their officers in the event of death or bankruptcy. As a means of improving their position, Mr. Ludlow (7) considered that they should be eligible for registration under the Friendly Societies Act without special authorisation. It appears(8) from the latest published returns of these societies that the Liverpool Clerks' Association has 3,067 members and 24,680*l.*; the Manchester Warehousemen's and Clerks' Provident Association, 2,186 members and 15,701*l.*; the London and Suburban Railway Officials Association, 150 members and 3,180*l.*; the Metropolitan Foremen Tailors, 303 members and 3,020*l.*; the Northampton Artisans and Labourers, 2,706 members and 15,677*l.*; and the Birmingham and District Clerks', 235 members and 230*l.* Another special authority under sub-section 5 of section 8 grants registration to societies formed for the purpose of "protecting and defending members of "any lawful trade or calling against frivolous, vexatious, "or malicious prosecutions, and, in cases of robbery and "other crimes affecting them, affording them legal or "other assistance for the detection and prosecution of the

[§ 594.] "offenders." Societies of this kind exist among cabmen and omnibus and tramcar men, and among dairymen, licensed victuallers, and other similar tradesmen. Their number is very small. Some societies, as, for example, the South Side of the Thames Firemen's Society, are registered under both the above special authorisations.

Building societies.

595. Building societies,[1] with the exception of the Birkbeck Society, which is under an Act of 1837, are registered under the Building Societies Act, 1874. They were defined by Mr. Ludlow as "associations for the "purpose of advancing money on real property."[2] It appears from the returns[3] for 1891 that the total membership of 2,333 societies, *i.e.*, of all the societies other than the Birkbeck, was 605,000, and the total funds 50,582,000*l.* Of this sum, 35,892,000*l.* represents the amount of members' investments, *i.e.*, 60*l.* per member, and 14,689,000*l.* is borrowed capital. A short time ago, a return was presented to Parliament, on the motion of Mr. Gerald Balfour, showing the number of building societies that had ceased to exist between the passing of the Act of 1874 and June 2nd, 1892. From this it appeared that, of a total number of 1,237 societies, 26 had terminated in the ordinary course, 181 had been stopped by notice, 410 had executed instruments of dissolution, 38 had been wound up by order of the court, 84 had been amalgamated with other societies, 32 had transferred their engagements to other societies, and 466 had been dissolved irregularly. According to Mr. Brabrook, the many recent failures among building societies have been largely due to the receipt of deposits withdrawable at call or short notice, when the funds were lent on securities that could not be quickly realised. It would not be possible, he thought, to absolutely prohibit the receipt of deposits at less than three months' notice. The only thing would be to make building societies, in holding out promises to pay on demand, state that those promises were qualified by the provisions of the existing Act, limiting their power of borrowing to the amount of two thirds of their mortgages and the liability of their members to the amount of their deposits and arrears. Mr. Ludlow's idea[4] was that the provision contained in the Industrial and Provident Societies Act of 1867, to the effect that no deposits repayable at less than two days' notice should be received, should be applied to building societies, and that a stricter limitation of the amount of deposits withdrawable at short notice that may be received, should also be effected, although, he was careful to add, such a limitation would not touch the main cause of failures, for they arise, not so much from the large amount of the deposits, as from the absence of control over the committees of management, especially with regard to taking repeated valuations of the assets so as to keep pace with depreciations. Mr. Brabrook[5] made six further proposals. First, that the words "if any" should be omitted after the words "within what limits" in section 16, sub-section 2. of the Act of 1874, in order that it should no longer be in the power of the directors of a building society to defeat the claims of existing ordinary members by the unlimited issue of preference shares. Secondly, that the right of members to ascertain the condition of a society's affairs by inspecting its books should be secured by the insertion in the Building Societies Act of provisions similar to those of section 14 of the Friendly Societies Act of 1875. This proposal was also made by Mr. Ludlow.[6] Thirdly[7], that provision should be made for control by the members over the trustees appointed for the purpose of dissolving a society under section 32 of the Building Societies Act of 1874. Fourthly, that the provision contained in section 43 of that Act as to penalties for wilfully making false returns, should be made more stringent, and that provision should be made also for recovering penalties from a society or its responsible officers, without requiring the prosecutor to prove the offence in the case of an individual. Fifthly, that a form of annual return should be prescribed, with provisions as to dates, &c. And, sixthly, that power should be given to the registrar, upon a proper requisition, to appoint persons to inquire into the affairs of a society or to call a special meeting of the society, as is provided by section 23 of the Friendly Societies Act. Mr. Brabrook, however, considered that it would not be expedient to give the persons so appointed precisely the same functions as are discharged by the committees of inspection under the Trustee Savings Bank Act.

Co-operative societies.

596. Co-operative societies[8] are registered under the Industrial and Provident Societies Act, 1867, which gives them the same advantages as societies under the Friendly Societies Act, with the additional privilege of incorporation.

(1) Digest, p. 36, and Appendix LV. and LVI. (2) Digest, p 37. (3) Digest, p. 38. (4) Digest, p. 37. (5) Digest, p. 36. (6) Digest, p. 37. (7) Digest, p. 37. (8) Digest, p. 37, and Appendix LV.

[§ 596.] Mr. Ludlow attested the wonderful progress which co-operative societies had made during the last 40 years, but pointed out that they had tended to become representative of the middle class rather than of the workers. Thus, although, as he contended, employés of these societies, and all persons concerned in their working, whether in the direction of production or distribution, ought to have a share in the profits as well as the purchasers or consumers, such was not the case, and, though it was urged that the employés could share as purchasers the profits which they could not share as workers, yet they were, in many cases, expressly excluded from the committees of management, and, in some cases, even from membership. How far this statement is borne out by the facts may be gathered from the full account of the history and working of the co-operative societies which was furnished by their own representatives.

Witnesses representing co-operative societies.

597. The witnesses referred to were Mr. J. T. W. Mitchell,[1] the chairman of the English Co-operative Wholesale Society, who traced the general development of the movement in England; Mr. W. Maxwell,[2] the chairman of the Scottish Co-operative Wholesale Society, who sketched the history of the same movement on the other side of the border; Mr. J. Greenwood,[3] the manager of the Hebden Bridge Fustian Manufacturing Society, who supplemented the evidence of Mr. Mitchell on the subject of co-operative production; Mr. F. Hardern[4], the chairman of the Oldham Industrial Co-operative Society, Limited, who gave special information with regard to the progress of the movement in the town of Oldham, Lancashire; and Mr. H. Vivian,[5] who represented the Labour Association for Promoting Co-operative Production, or, in other words, the minority party within the movement which the four first named witnesses represented as a whole. By combining the information given by these witnesses, it has been found possible to present the following view of the past history and present position of the co-operative movement in the form of a single continuous narrative.

History of the co-operative movement: first period, 1779-1844.

598. The earliest recorded experiments in industrial co-operation were set on foot towards the end of last century, both in England and Scotland. When and where the very first attempt was made, however, appears doubtful, although, by comparing the evidence given by Messrs. Mitchell and Maxwell respectively, it would seem that the northern country was first in the field, for the latter witness[6] represented the Govan Society, which is still in existence, as having been founded in 1779, and stated that this is a typical instance of a whole class of societies that were founded about the same time. These were called victualling societies. They are distinguishable from co-operative societies proper by the fact that they distributed their profits to shareholders and not to purchasers, the result being that the poor artisans, having little or no capital to invest, had but small inducement to join them, and the membership was accordingly recruited mainly from among the small employers of labour, of the lower middle class. On the other hand, the sole evidence given by Mr. Mitchell[7] for the existence of co-operation in England before 1800, was the institution of a co-operative flour mill at Hull, as the result of a petition addressed by the poor inhabitants of that town asking for assistance in creating a fund for building the same in view of the high price charged for flour by the millers. The mill proved successful, and its success so exasperated the millers that they indicted the society that owned it as a nuisance at the York Assizes, in 1811. The jury, however, gave a verdict of acquittal, and thus saved the mill, which has prolonged its existence down to the present day. Other mills were started soon afterwards on the same lines, and their success, accompanied by the agitation for social improvement conducted by Robert Owen, led, in 1828, to the application of the co-operative principle to the purposes of general trading. Societies were, accordingly, formed in large numbers, but formed on the communistic principle of accumulating the profits in a general fund instead of distributing them among the members. By 1835, however, they, one and all, showed signs of decay, owing to the following causes:—First, because the members possessed little knowledge, and less experience, as to the rules of trading. Secondly, because they employed improper agents, without any guarantee as to their honesty. Thirdly, because, in many cases, the credit system was in operation among them. Fourthly, because they failed to secure due legal recognition and protection, either for themselves against their members, or for their members against themselves.

The Rochdale System.

599. In the meantime, some crude attempts were being made in Scotland[8] towards the working of schemes of

(1) Digest, p. 6. (2) Digest p. 9. (3) Digest, p. 12. (4) Digest, p. 13 (5) Digest, p. 14. (6) Digest, p. 9. (7) Digest, p 6. (8) Digest, p. 9.

[§ 599.] distributive co-operation in the interests of the consumers, but nothing of importance was effected in either country till 1844, when the establishment of the Rochdale Pioneer Co-operative Society(1) on the principle, afterwards known as the Rochdale system, of appropriating the profits to division among purchasers in proportion to the value of their purchases, gave the movement a fresh start. This principle is to be distinguished both from the communistic plan of the earlier co-operators, which was to accumulate the profits in a general fund, and also from the system adopted by supply associations, such as the Army and Navy and Civil Service Stores, which consists in an attempt to eliminate profits altogether by selling as near as possible at cost price. As a matter of practice, however, purchasers do not actually touch the dividends appropriated to them unless and until they make application for them, for it is considered better for members to accumulate on deposit the sums due to them during good times in order that, during bad times, the societies may be able to continue to supply goods without violating the ready money principle which they profess. Indeed, notwithstanding all rules to the contrary, credit is sometimes given after all, and though Mr. Maxwell(2) explained that, in Scotland, it was usual to limit the credit given in such cases to an amount equal to a certain proportion, varying from one half to three fourths, of the members' paid-up share capital, and is given conditionally upon the society having a lien over such share capital; yet the same witness afterwards attributed all the bankruptcies that have occurred of late years, partly, indeed, to permitting the control to fall into the hands of an individual or clique, but, for the rest, to the carelessness of committees in allowing too much credit. This point was not allowed to pass unnoticed by Mr. R. Walker,(3) the representative of the Traders' Defence Association of Scotland, who came before the Commission for the express purpose of criticising the co-operative movement. Private traders, he said, who declare their terms to be cash, stick to their word, whereas co-operative societies frequently break their rule in this respect. With regard to the general working of the Rochdale system, moreover, Mr. Walker(4) expressed himself as follows:—Neither in quality nor in price do the goods sold by co-operative societies conducted on the Rochdale system compare favourably with those sold by cash shopkeepers, and, in their large dividends—much larger than what would otherwise be a private trader's profit—members of the stores are only receiving back what is, in some cases, but a very small proportion of the extra price originally charged. This is proved by the complaints repeatedly addressed to the "Co-operative News" by members of the co-operative societies themselves, and by the failure of the general public, which is not subject to undue influences, to join the movement. To quote a specific instance, the proposal to start a co-operative store at Wishaw was rejected at a public meeting, on the ground that the branch of the Clelland Store, which it was proposed to take over, had been selling for 24*s.* or 25*s.* what could be bought in private shops for 20*s.*, and had been repaying in the form of dividend only 2*s.* or 2*s.* 6*d.* of this price. Members of the Traders' Defence Association would heartily welcome the abolition by co-operative societies of their system of paying dividends to purchasers, and the substitution of the system of selling the goods at cost price plus the expenses of distribution. Then it would be possible to institute a fair comparison between the relative advantages of dealing with the stores and with private traders, and the result would be in favour of the latter. In fact, the reason why the really poor do not join the co-operative societies is that they cannot afford to pay the high prices charged by them, not that, by dealing with private traders, they can get credit, for to members of this class no credit is given.

History of the co-operative movement: second period: the Rochdale Pioneer Society.

600. Such, then, being the nature, and such the alleged defects, of the Rochdale system, it is now necessary to resume the thread of the narrative at the point where it was broken off, and to trace the course of events that have marked the translation of that system from theory into practice. As has been already stated, the first step in this direction was taken by the establishment of the Rochdale Pioneer Co-operative Society, in 1844. The objects of this society(5) were originally defined as follows: First, to establish a store for the sale of provisions, clothes, &c. Secondly, to build, purchase, or erect a number of houses, in which members desiring to assist one another in improving their domestic and social conditions might reside. Thirdly, to commence the manufacture of such articles as the society might determine upon for the employment of such members as might be without employment or suffering in consequence of repeated reductions in their wages. Fourthly, to purchase or rent an estate or estates of land, which should be cultivated by members out of employment or in receipt of bad wages. Fifthly, to proceed as soon as possible to regulate the powers of production, distribution, education, and government, or, in other words, to establish a self-supporting home colony of united interests, and to assist other societies to do the same. Sixthly, to open a temperance hotel in one of its houses as soon as convenient. These objects have for the most part been carried out, although the third, relating to the undertaking of productive enterprises, has not been realised. The Rochdale society has supported the English Wholesale Society in its productive work, but has practically confined its own efforts to the sphere of distribution. At the present time this society is subject, with slight modifications, to the same constitution and rules as were drawn up at its commencement. Its affairs are conducted by a committee, consisting of a president, a treasurer, a secretary, and eight unofficial members, elected periodically. This committee is divided into four sub-committees, each in connexion with one of the following departments, viz., grocery, coal, furnishing and apparel, and finance, whose proceedings are subject to revision by the general committee at its ordinary weekly meetings. The only qualification necessary for membership is the purchase of 4*l.* worth of goods a year. The average portion of the share capital subscribed for per member does not exceed 30*l.* The Industrial and Provident Societies Act limits the amount to 200*l.*, but the society has by its own rules gone further, and imposed a limitation of 100*l.* Mr. Mitchell put in(1) a tabulated statement showing the extension of the society's operations between 1845, when its membership amounted to 74 persons, its funds to 181*l.*, its sales to 710*l.*, and its profits to 22*l.*, and 1891, when its membership amounted to 11,647 persons, its funds to 370,792*l.*, its sales to 296,025*l.*, and its profits to 36,823*l.*, or, including the interest on the investments which, by a change of policy, the society had made outside its own business, to 52,198*l.* It is to the capital sum represented by such investments that the excess of the funds over the sales is due. The figures furnished by Mr. Mitchell show between 1877 and 1891 an increase of membership but a decrease of sales. This fact, he explained, is due to the increase in the families of co-operators being more rapid than the increase in their purchasing power. Of the net profits, 2½ per cent. is appropriated to educational purposes. By this means, the society has instituted a large central newsroom, and provided 18 branches with libraries, containing an aggregate number of 17,318 volumes, and has organised science, art, and technology classes, which have been attended during the current session by 345 students, paying 12*l.* in fees.

[§ 600.]

The co-operative movement in England and Wales.

601. Other societies followed the Rochdale Pioneers in quick succession. In some places, as, for example, in London, where its want of success is very marked, retail distributive co-operation has made less progress than in others. In illustration, however, of its general development in England and Wales, Mr. Mitchell(2) put in a table showing the number and character of the shops connected with 919 retail distributive societies in 1887. The number was 5,010, and the businesses conducted were as follows: Baking butchering, and trades connected with flour, grocery, coal, clogging, drapery, millinery, boots and shoes, tailoring, earthenware, furniture, hardware, ironmongery, and beer, wine, and spirits.

The co-operative movement in the town of Oldham, Lancashire.

602. Nowhere in the kingdom has the co-operative movement made such progress as in the town of Oldham, Lancashire. Mr. Hardern put in a statement(3) relating to the five principal societies established in the borough, and remarked(4) that the fact that the industrial population of Oldham was specially well paid, well fed, and well housed, was mainly to be attributed to the vitality of the co-operative movement in their midst. It is a fixed rule with each of the five societies referred to that every member must belong to a different household, and their membership includes fully 50 per cent. of the householders in the town, while they furnish employment for 75 per cent. of the industrial population.

Of these societies the Industrial, of which Mr. Hardern is chairman, and the Equitable, are the two largest. They were both established in 1850, and the three other societies subsequently. In all five the capital is withdrawable at call. Their aggregate sales during the past 20 years have amounted to 11,735,589*l.*, of which 1,871,138*l.* has gone as interest on share capital and in dividends to members; 444,213*l.* to education grants, and 3,007*l.* for charitable purposes. The total amount lent by the three societies that have building departments for erecting cottages, is 165,103*l.*,

(1) Digest, p. 6. (2) Digest, p. 10. (3) Digest, p. 15. (4) Digest, p. 15. (5) Digest, p. 6, and Appendix III.

(1) Digest, p. 7, and Appendix IV, which gives accounts for the quarter ending September, 1892. (2) Digest, p. 7, (3) Appendix XLV. and LI. (4) Digest, p. 13.

[§ 602.] of which 125,018*l.* has been repaid, and 40,085*l.* is still owing. The number of cottages so built is 1,026. No member is allowed to borrow for building purposes more than 300*l.* at a time, the object being to avoid assisting persons to become owners of houses which they do not themselves intend to occupy. The societies have exceeded the strictness of the law, limiting the amount of share capital per member to 200*l.*, by imposing further limitations, in the case of the Industrial to 25*l.*, in that of the Equitable to 30*l.*, and in that of Crompton Society to 30*l.* The reason why these limitations were imposed was that the amount of share capital so far exceeded the requirements of the trade that the societies, being bound by their rules to restrict the area of their investments to the town of Oldham, were unable to find within that area a sufficient number of safe securities yielding 5 per cent. to absorb it. Mr. Hardern's own opinion was that it would have been a better policy to reduce the rate of interest than to limit the number of shares per member; but the shareholders insisted on their 5 per cent., even at the cost of entailing loss upon their societies, which were accordingly compelled in self-defence to protect their finances against the self-interest of their own members, in the manner indicated. In consequence of the introduction of the 25*l.* limit, the Industrial Society returned 131,500*l.* to investors. The total amount, whether repaid or not, that has been added to this Society's share capital during the last 21 years, is 2,022,638*l.* The average annual purchases per member are worth 30*l.* The working expenses amount to 4·59 per cent. and the net profit to 16·28 per cent. on the sales. The educational grant is 2½ per cent. of the net profits, and consists of considerably over 3,000*l.*, while depreciations are estimated at nearly 14 per cent. of the value of the fixed stock.

The co-operative movement in Scotland.

603. Turning to Scotland,[1] it appears that, since 1846 or 1847, when the Rochdale system was first introduced into the country, the progress of the co-operative movement has been such that, in 1890, the number of retail distributive societies amounted to 333, with an aggregate membership of 171,088, their share capital to 1,335,809*l.*, and loan capital to 971,181*l.*, their sales to 800,897*l.*, and their profits, after paying all the expenses of management and interest on capital, both loan and share, to 10¼ per cent., or 830,860*l.*, representing an average dividend of 4*l.* 17*s.* 1½*d.* per member. Of these profits, about two thirds are actually withdrawn per annum by the members to whom they are apportioned, and about one third is left on deposit. The division of the profits re-acts upon the prosperity of the stores by increasing the purchasing power of the customers, almost all of whom are members, inasmuch as outsiders do not, as a rule, take advantage of the absence of a rule prohibiting them from dealing. In 1891, the Scotch societies devoted 3,411*l.* to educational, and 3,211*l.* to charitable purposes.

Statistics of retail distributive societies in Great Britain and Ireland.

604. Mr. Mitchell[2] gave the following figures relating to the position of the retail distributive societies in the whole of Great Britain and Ireland at the end of 1891. The number of such societies was 1,459, and their aggregate membership 1,098,352; share capital, 11,520,045*l.*; loan capital, 1,207,204*l.*; reserve fund, 478,861*l.*; value of saleable stock, 3,554,771*l.*; value of land, buildings, and fixed stock, 4,944,512*l.*; allowance for depreciation, 202,150*l.*; investments, 5,786,516*l.*; amount received during 1891 for goods sold, 31,514,634*l.*; trade charges during 1891, 1,831,216*l.*; total net profit made in 1891, 4,342,373*l.*; amount applied for educational purposes during 1891, 32,651*l.*; amount applied for charitable purposes during 1891, 10,156*l.*; subscriptions of the Central Board, 4,319*l.* 5*s.* 4*d.*

Wholesale co-operation: 1831–1863.

605. Wholesale, as opposed to retail co-operation, was first instituted in 1831, by the formation of the North-West of England United Co-operative Company,[3] but this first attempt failed, owing to want of sufficient capital to enable it to compete with other wholesale establishments. A second venture, promoted by the body of Christian Socialists in London, met with no better fate, and the failure was repeated in the case of the wholesale department attached to the Rochdale Pioneer Society, which was opened in 1853. In 1862 and 1863, however, the matter was again taken up, and, as a result of several conferences in the northern districts of England, where the societies had all along shown greater vitality and more striking signs of progress, it was decided to establish the "The North of "England Co-operative Wholesale Society," of which only registered co-operative societies were capable of becoming members or shareholders. In course of time, this society altered its title to "The English Co-operative Wholesale "Society," in view of the enlargement of its business connexion in other parts of the country.

The English Co-operative Wholesale Society,

606. This Society[4] entrusts the administration of its affairs to an executive committee, elected by the committees of the various retail societies in membership, and consisting of eight members for the Newcastle and London branches respectively, and 16 representing the general body, whose headquarters are at Manchester. The presence of two of the members for both Newcastle and London, however, in addition to the 16 at Manchester, is deemed sufficient to complete the executive authority. Two Manchester, one Newcastle, and one London member of the committee, retire quarterly, but are eligible for re-election. The society was registered on August 11th, 1863, and commenced business on March 14th, 1864, when 50 societies, representing 17,545 persons, had become shareholders, and had subscribed capital to the extent of 999*l.* In two years, the number of societies in membership had increased to 96, representing 26,240 persons, and a depôt was opened at Tipperary, Ireland, for the purchase of butter and eggs, in pursuance of one of its principal objects, viz., to eliminate the middleman and purchase direct from the producer. At the present time, the society has six depôts of the kind in Ireland, and their combined shipments for 1891 amounted to 122,151 firkins of butter, worth 468,706*l.* In 1881, a similar depôt was opened at Copenhagen for the purchase of Danish produce, and its shipments—comprised chiefly of butter—are now worth over 930,800*l.* per annum. Depôts have subsequently been started at Hamburg and Aarhus, the shipments from the former being 232,215*l.* for the year, and from the latter 131,422*l.* for the 31 weeks that have elapsed since its establishment. In 1876, moreover, a depôt was opened at New York, which now sends over to England cheese, bacon, flour, and other produce to the annual value of 476,746*l.* Prior to 1871, the English Wholesale Society had conducted all its business with the distributive societies in England from Manchester, but in that year a branch was established at Newcastle-on-Tyne for the benefit of the societies in that district. In 1891, the sales of this branch amounted to 1,907,265*l.* In 1874 a similar branch was opened in London to supply the requirements of the societies in the south of England. Its sales amount to 1,283,612*l.* per annum. In 1882, a saleroom was opened at Leeds, where a representative is stationed to show samples of goods and receive orders from those societies that are situated in the immediate neighbourhood. Seven other such salerooms have since been opened at Nottingham, Blackburn, Huddersfield, Birmingham, Northampton, Bristol, and Cardiff. In 1872, the banking department was instituted. Its turnover for 1873 was 1,581,495*l.*, and for 1891 28,590,670*l.* In 1873, the nucleus of an insurance fund was formed by transferring the sum of 2,000*l.* from the reserve fund. The society now insures its own steamships in this fund, as well as a portion of its various buildings, fixtures, stocks, and goods in transit by water. Notwithstanding the fact that large payments have been made to meet losses by fire, damage to steamships, &c., the fund has now accumulated, through premiums and additions from the profits, to the large sum of 205,766*l.* In 1876, a small vessel was purchased to ply between Goole and Calais, taking out English coal and manufactures and bringing back French produce. The society now owns a fleet of six steamers "Pioneer," "Unity," "Progress," "Equity," "Federation," and "Liberty," which were built at a cost of 84,500*l.*, and have a registered gross tonnage of 3,898. The receipts of the shipping department, however, have not always been sufficient to pay the charges for interest and depreciation. In 1882, a buyer was appointed to take charge of the purchase of teas and coffees direct from the importers, instead of, as heretofore, conducting this business through a firm of tea merchants. The success of this step was soon demonstrated by the rapid increase in the sales of tea and coffee, which now amount to 570,431*l.* per annum, against 190,020*l.* in 1882. The manufacture of chocolate and cocoa has been added to this department, and is making very satisfactory progress. The department finds employment for 300 hands. On the whole, therefore, the progress made by the English Wholesale Society has been rapid and continuous. In the first period of its existence, it confined its operations almost exclusively to groceries and provisions, but by degrees there have been added the drapery, boot and shoe, furnishing, hardware, and other departments, and, at the present time, it can supply almost every article that co-operators require. The figures furnished by Mr. Mitchell[1] relating to its position at the end of 1891, in respect of its distributive work—for, as will appear hereafter, it has also embarked in some successful enterprises in the sphere of production—are as follows:—Number of members, 966; share capital, 202,923*l.*; loan capital, 891,216*l.*; reserve fund, 41,997*l.*; value of saleable stock, 645,930*l.*; value of land, buildings, and fixed stock, 402,710*l.*; allowance for depreciation, 33,737*l.*; invest-

(1) Digest, p. 9.

[§ 606.] ments, 296,542*l.*; amount received for goods sold during 1891, 8,177,478*l.*; trade charges during 1891, 164,640*l.*; total net profit made during 1891, 115,146*l.*; amount applied for educational purposes during 1891, 50*l.*; amount applied for charitable purposes during 1891, 387*l.*; subscriptions of the Central Board, 150*l.*

The Scottish Co-operative Wholesale Society.

607. The Scottish Co-operative Wholesale Society(1) was started in 1868, on the same lines as the corresponding English Society, which had originated four years previously. It consists of a federation of 268 retail societies. Every society in membership is required to take at least one 1*l.* share per person. There are accordingly no fewer than 131,086 individual shareholders. All societies in membership are furnished with tickets of admission to the quarterly meetings, and, in addition to the ticket obtained by the mere fact of membership, every society receives one for every 1,000*l.* worth of goods purchased during the quarter. Generally speaking, the Scottish Wholesale is well supported by the retail societies. It employs about 300 hands in connexion with its distributive, as distinguished from its productive business. According to Mr. Mitchell's figures,(2) it appears that, at the end of 1891, the financial position of the society in respect of its distributive business was as follows:—Share capital, 20,211*l.*; loan capital, 510,791*l.*; reserve fund, 64,938*l.*; value of saleable stock, 241,138*l.*; value of land, buildings, and fixed stock, 121,837*l.*; allowance for depreciation, 9,173*l.*; investments, 196,921*l.*; amount received for goods sold during 1891, 2,660,062*l.*; trade charges during 1891, 58,140*l.*; total net profit during 1891, 77,467; amount applied for charitable purposes during 1891, 350*l.*; subscriptions of the Central Board, 50*l.* It also appeared from figures furnished by Mr. Maxwell(3) that, of the 89,090*l.* which formed the net profit of the distributive and the productive departments combined, 68,734*l.* was disposed of to members, 931*l.* 6*s.* 10*d.* to non-members, and 3,011*l.* 4*s.* as bonuses to the society's employés. The payment of these bonuses is one of the points that distinguishes the Scotch societies from their English counterparts. It is made at the same rate per pound on the wages as the payment to purchasers on the purchases. In 1891, 23 per cent. of the profits went in this manner to the workers. The ordinary dividend paid on purchases is 7*d.* per pound. Possibly about 4*d.* per pound of the profits of the retail societies is given them by the wholesale as a share of its profits. Harmonious relations exist between the English and the Scotch Wholesale Societies. The latter has 25,000*l.* in the funds of the former in the shape of a loan, and proposals have been made for amalgamating the two organisations. Such a proceeding, however, appears to be illegal.

Production by distributive societies in England.

608. The progress made by the distributive societies both wholesale and retail, has led a large number of them to undertake the production of the articles they sell. But, as will appear hereafter, when the relations between the co-operative and the trades union movements come to be discussed, it is important to distinguish the co-operative production, which consists in the combination of consumers to employ producers, from co-operative production proper, which consists in the combination of producers to employ themselves. The total annual value of the goods made by the retail distributive societies in England(4) that employ productive labour is put down at 3,347,480*l.* The number of persons employed in their production is 4,600., viz., 1,600 bakers, 600 butchers, 1,200 bootmakers, 700 tailors, and 500 dressmakers. In addition to this, some of these societies own corn mills, viz., those at Leeds, Banbury, Barnsley, Carlisle, Cleator Moor, Leicester, Leigh, Lincoln, Mansfield, and Stockton-on-Tees, all of which, with the exception of the one at Leigh, work them at a profit. Production is also carried on by groups of distributive societies for their common benefit. The Derwent Co-operative Flour Mills, Shotley Bridge, Durham, and the Colne Vale Corn Mill, were mentioned by Mr. Mitchell as examples of this phase of co-operative effort. More important, however, are the productive enterprises undertaken by the English Co-operative Wholesale Society. The first of such enterprises was set on foot in 1873, by the establishment at Crumpsall,(5) near Manchester, of a factory for making biscuits and boiled sweets. At the same works, there was subsequently added the manufacture of jams, marmalade, and dried goods. The progress of these works has been continuous. They now find employment for over 260 work-people, and purchase over 69,000*l.* worth of goods annually. Boot and shoe works(6) were also established in the same year at Leicester, and are now annually making 1,000,000 pairs of boots, of the aggregate value of 250,000*l.*, and employing 2,000 hands. Encouraged by the success of these undertakings, the Wholesale Society established a soap-works at Durham(7) in 1874, and, in 1880, opened, another boot and shoe works at Heckmondwike.(8) A woollen mill was started at Batley in 1887,(9) a clothing factory at Leeds in 1888, and, in 1891, a large flour mill was erected at Dunston, near Newcastle-on-Tyne, capable of manufacturing 40 sacks of flour per hour.(4) The total capital expended on the Wholesale Society's various productive works amounts to about 350,000*l.*, and the total value of the goods produced to 714,480*l.* At the present time, the number of persons employed in connection with these works is over 3,000. The figures furnished by Mr. Mitchell relating to their financial position at the end of 1891 are as follows:—Share capital, 271,033*l.*; value of saleable stock, 187,112*l.*; value of land, buildings, and fixed stock, 172,677*l.*; allowance for depreciation during 1891, 7,856*l.*; amount received for goods sold during 1891, 588,952*l.*; total net profit made during 1891, 19,862*l.*

[§ 606.]

Production by distributive societies in Scotland.

609. Speaking generally, the Scotch societies(5) are distinguished from their English neighbours, not only in giving their employés a share of the profits, as has already been mentioned—but also in confining their investments to co-operative undertakings and in investing a larger proportionate amount of their capital in productive enterprises. The Scottish Wholesale(6) manufactures furniture, clothing, shirts, hosiery, preserves, confectionery, boots and shoes, and tobacco. It also employs a large staff at printing and bookbinding and in making paper bags, and is directly employing workmen to build a large flour mill at Edinburgh. The productive departments are carried on almost entirely for the use of the various distributive societies. Among possible customers outside the movement, indeed, there exists a prejudice against supporting either co-operative or other productive firms where the profit-sharing system prevails. A notable exception is the case where the tenders of the Wholesale Society, competing against all comers for a certain contract, was accepted by the Corporation of Glasgow. The profits of all the productive departments of the Wholesale Society are pooled and divided at equal rates among all those who can claim a share. The aggregate account has always shown a profit. The departments might be worked independently of each other, but, if they were, the men employed in the less successful of them would be discontented at not receiving so large a share of profits as their fellows. The hope, however, that starting several industries at once would enable men thrown out of employment in one department to be transferred to another, has been disappointed. The number of persons employed by the Scottish Wholesale in its productive work is about 1,800. The following is the statement prepared by Mr. Mitchell(7) as to the financial position of that society with respect to that work at the end of 1891:—Share capital, 75,167*l.*; value of saleable stock, 48,832*l.*; value of land, buildings, and fixed stock, 39,830*l.*; allowance for depreciation during 1891, 2,260*l.*; amount received for goods sold during 1891, 167,974*l.*; total net profit made during 1891, 11,623*l.*

Co-operative production.

610. Now, easy though it be to establish a clear distinction between combinations of consumers to employ producers and combinations of producers to employ themselves, it is by no means so easy to preserve it when dealing with the actual facts. And that for two reasons. First, that both forms of co-operative association are not only comprehended within the same general co-operative organisation, but—perhaps, as was hinted by Mr. Vivian,(8) from a desire to minimise the great conflict of opinion that is known to exist within the movement as to the proper status of the workers—are left absolutely undistinguished in the returns of the Central Co-operative Board. And, secondly, that both tend, as it were, to converge from their opposite points to a common centre, where each merges its identity in the other. Thus, as has been seen already in the case of the Scotch societies, the combinations of consumers begin to share their profits with their workmen, while, as will appear from what follows, the combinations of producers either surrender the control of their undertakings to consumers or retain it and employ others to do the work. The result is that co-operative production in the proper sense of the term, though the desire of many associations, is the possession of few.

Product societies proper

611. Of attempts,(9) indeed, on the part of workmen to become their own employers, there has been no lack. As early as the beginning of the present century, four co-operative productive societies were started, at Birkacre, at Huddersfield, at Kendal and at Loughborough; but they never managed to furnish work for more than a small fraction of their members, and have now ceased to exist. The next attempt was made about the year 1850, by the Christian

[§ 611.] Socialists,(1) who formed various associations of producers in both London and the provinces, and then established an organisation called the Society for Promoting Working Men's Productive Associations, in order to secure for them a connexion among the various associations of consumers.(2) In 1851, there were 37 of such societies in existence in both London and the provinces.(3) In the provincial societies, all the capital was found by the workers, but, in the London Working Men's Productive Association, only 474*l.* of the 13,560*l.* worth of capital it possessed in 1852 was subscribed by the men employed, the remaining 13,086*l.* being advanced by Mr. Vansittart Neale and other gentlemen interested in the movement. In 1883, the English Wholesale Society(4) published in its annual a list of 224 alleged failures of co-operative productive societies, registered between 1850 and 1880, whereupon Mr. Greening, the present treasurer of the Labour Association for Promoting Co-operative Production(5) which was established in the course of the same year, obtained from Mr. Ludlow, the then chief registrar of friendly societies, permission to examine the rules and constitutions of the societies that were reported as having failed, and the result of his analysis was to prove that only 24 of these societies were conducted on the basis of giving even a portion of the profits and the management to the workers. Mr. Greenwood(6) stated that there were, at the present time, 88 independent co-operative productive societies in England, with an aggregate membership of 8,081, with an aggregate loan capital of 235,244*l.*, a reserve of 18,979*l.*, a saleable stock of 141,703*l.*, a fixed stock of 100,829*l.*, an annual sale of 594,594*l.*, and a profit of 25,214*l.*, of which 8,213*l.* was paid as interest to capital, and 3,450*l.* and 3,713*l.* as dividends to labourers and purchasers respectively, while 484*l.* was written off as "loss." But he was careful to explain that among these societies he had included both those concerns where distributive societies and patrons of the movement provided some of the capital, and where the workers shared the profits with capitalists and purchasers, and also those where profit-sharing was practised under an individual employer or firm, as well as co-operative productive societies proper, where the workers monopolised both profits and management. Mr. Mitchell,(7) moreover, placed the number of the so-called productive societies in Great Britain and Ireland, of whose financial position at the end of 1891 he furnished statistics, at the high figure of 25,217, from which it is clear that his interpretation of the term "co-operative production" was more liberal even than that adopted by Mr. Greenwood. Indeed, it appears doubtful(8) whether there is any society existing at the present time that is conducted on the strict lines of co-operative production as defined above. The following, however, are those that approach most nearly to the true form:—The Nelson Self Help Weaving Society, the Finedon, the Northamptonshire Productive, the Raunds, and the Tingdene Boot and Shoemaking Societies, the Bromsgrove Nail Forgers' and the Dudley Nail Manufacturing Societies, and the Brighton Artisans and the Brixton Building Societies. And of these, the Finedon Society(9) has only 27 members, although its sales for the past year have amounted to 19,881*l.* and its share capital is 1,860*l.*, the fact being that it employs as workers persons other than members, and the Co-operative Union has recently called a conference to urge it to admit more workers to membership and to a share in the profits. The Northamptonshire Productive Society(10) has been decidedly successful. During the last 10 years, it has earned a total profit of 3,443*l.*, and, during 1891, a profit of 2*s.* 8*d.* in the pound on wages. It is noteworthy, moreover, that most of the above mentioned societies are connected with the boot trade, and depend very largely upon Government contracts.

Co-partnership productive societies.

612. Of societies, however, wherein the workers share, though they do not monopolise both profits and management, there are 47.(11) Their aggregate membership is 11,000, their annual aggregate business is 666,000*l.*, their capital 326,000*l.*, their profits 37,000*l.*, and the number of workmen they employ is 3,653. These figures show a striking advance upon those for 1883, which give the number of these societies as only 15, their membership 2,557, their annual business 160,000*l.*, their capital 103,000, and their profits 9,000*l.* A typical example of these "co-partnership" societies, as they are called, to distinguish them from co-operative productive societies proper on the one hand, and from consumers' societies of the other, is the Leicester Boot and Shoe Co-operative Works.(12) This society is registered under the Industrial and Provident Societies Act, with limited liability. Its shares are 1*l.* each. The total profit since 1887 is 5,200*l.* [§ 612.] Of this, 1,874*l.* has been appropriated to the workers, 937*l.* to purchasers, 562*l.* to the official staff, 468*l.* to the provident fund, 468*l.* to capital, in addition to the 5 per cent. reserved to it before the division of profits is effected; 348*l.* to the reserve fund, 234*l.* education, to 140*l.* to the special service fund, 102*l.* to the charitable agencies, and 67*l.* to "other purposes." Every worker is also a shareholder, because he is not allowed to draw his share of the profits until he has accummulated sufficient to enable 5*l.* to be added to the capital. The general meeting of shareholders elects the committee of management, consisting of a president, a secretary, and twelve others, and three subcommittees, to deal with minor matters of detail. The committee of management appoints departmental managers, who have power to suspend a worker, but not to discharge him. Of the other co-partnership societies, 11 are engaged in textile, 10 in leather, 12 in metal, and 12 in miscellaneous industries, such as building, farming, cabinet-making, tailoring, &c. The history of the Paisley Manufacturing Society, one of the 11 societies engaged in the textile industry, is instructive as illustrating the tendency of producers' and consumers' societies to become fused.(1) This society was instituted in 1862, by a body of weavers and others, being members of the Paisley Provident Co-operative Society, on co-operative productive lines. During 1868, however, the propriety of giving a share of the profits to purchasers was discussed, and the system was introduced forthwith. A year later, it was agreed to pay a dividend on wages to all the workers alike, to employés as well as to members. Until 1870, the membership was confined to individuals; but, in that year, the Paisley Equitable Co-operative Society took up one share, and, by the end of 1873, 24 societies were members. In 1870, the share and loan capital amounted to 1,177*l.* and the sales for the year to 2,463*l.* From this point, the following figures record the progress of the society, in periods of five years. First, as to capital. By the year 1875, it had increased to 4,421*l.*, of which 2,403*l.* was for shares. At 1880, the share and loan capital was 6,174*l.* At 1885, it amounted to 9,166, and, at June, 1890, the total share and loan capital was 19,546*l.*, share capital being 8,563*l.*, and loan 10,983*l.* The sales for the five years ending June 1875, were 28,644; for those ending June 1880, 34,783*l.*, an increase of fully 1,200*l.* a year. For these five years ending June 1885, the sales were 74,779*l.*, an increase of 8,000*l.* a year. For the five years ending June 1890, the sales were 154,563*l.*, or an annual increase of nearly 16,000*l.* These figures show that, during the first ten years, the capital and sales have doubled in each of the five years. The amount paid in wages for the five years ending June 1880 was 4,920*l.*; for those ending June 1885, 13,369*l.*; and for those ending June 1890, 31,463*l.* For the five years ending June 1880, the dividend paid to purchasers was 550*l.*; to workers 68*l.* For the five years ending 1885, to purchasers, 2,056*l.*; to workers, 279*l.* For the five years ending 1890, to purchasers, 6,837*l.*; to workers, 873*l.* As a result of the growth of the society, a meeting of members, in 1888, gave powers to the directors to proceed with the building of a factory and warehouse. During 1889, a site was fixed upon the lands of Colnislee, and contracts were arranged for a factory and warehouse, and also for 48 looms and winding machines, &c. By the end of March 1890, all the looms were working. At a general meeting of members, held on the 9th of August 1890, further powers were given to the directors. A large addition to the original factory has been completed. The weaving shed is now capable of accommodating about 200 power looms (99 are already laid down and fully employed), also beaming and winding machines. During 1891, the growth of the society has been fully maintained. The membership now includes 211 societies. The loan and share capital is 33,754*l.*; the amount expended on property and machinery, 26,740*l.*; the nominal value of property and machinery is, 18,779*l.*; the reductions are 1,961*l.*; the sales for the year, 48,361*l.*; the dividend paid to purchasers, 1,943*l.*; wages paid for the year, 8,918*l.*; dividend paid to wages, 365*l.* The society now manufactures wool, union and cotton shirtings and shirts, cloakings, aprons, bed quilts, union flannelettes, &c.; also ladies' clan tartan, tweeds, and serge costume cloths; fancy, Thibet, and cotton skirtings and skirts; tweed, Saxony, and velvet shawls; wool handkerchiefs (shawlettes) and scarfs. Its employés work the ordinary factory hours, viz., 56½ per week. Not only are they admitted to the board of management, but the chairman of that board is himself one of their number This has not led to any relaxation of discipline, although, in the tailoring department, there has been some little trouble with the men's trades union, which objected to the employment of women.

[§ 613.] Profit-sharing productive societies.

613. The third class of productive societies are those where the workers share in the profits, but not in the management. This, as has been seen, is the case with almost all the Scotch societies. The form of co-operation, indeed, that is exemplified by all societies of this class is essentially identical with profit-sharing, just as co-partnership is essentially identical with industrial partnership, the only difference being that in the former case the employer whose profit the workers share is a co-operative society, whereas, in the latter, he is an individual, or company, unconnected with the co-operative movement. The best example, given in the course of the evidence, of a society of this class is the Hebden Bridge Fustian Manufacturing Society, of which Mr. Greenwood is manager.(1) It originated in 1870, when about 30 fustian cutters agreed to put by 3*d.* a week each towards establishing a fustian cutting and dyeing works. It was to be conducted on the lines of genuine co-operative production, only persons actually engaged in the trade being admitted to membership. The rules were registered on September 1st, 1870, under the Industrial and Provident Societies Act, 1867, and, by resolution of the members, the object of the society was set forth to be—"To find employment for its members in "the manufacture and sale of fustian, and it shall, by "contributions (of money, labour, and profits) accumulate "1,000*l.* for that purpose. The society will aim at the "regulation of wages and labour in this branch of trade, "but it will not enter arbitrarily into any dispute between "masters and workmen. Still, it will practically educate "its members in the causes which operate for and against "them in their daily employment, and in the principles "that will tend to their elevation and improvement." From the manner in which this resolution is worded, it would appear that it was not expected that the society would find employment for all its members, but that some would be working for other firms. By the end of 1870, the society had 95 members, 83*l.* capital, 55*l.* sales, and 3*l.* profit. In December, 1871, the first bonus was declared at 1*s.* in the pound on wages. In July, 1873, the rate of interest payable on share capital was limited to 7½ per cent. per annum. In 1877, the society found that, owing to the habit of members selling their shares to outsiders on leaving its service, a large proportion of its share capital was in the hands of the public. To counteract this tendency to violate the principle on which it was founded, it refused to allow its share capital to be held outside its organisation, but made an important exception in favour of co-operative societies. At the same time, it began to issue withdrawal shares, which it could repay and cancel when the holders left its service. In 1885, the society decided to issue no more shares bearing 7½ per cent. interest, and brought B. shares at 5 per cent., and finally, in January 1890, it reduced to that rate the interest on all shares alike. In December, 1891, the share capital amounted to 22,899*l.*, of which 9,644*l.* was held by 266 co-operative societies, 5,593*l.* by 274 workers, and 7,662*l.* by 192 others, including ex-workers, the last item being a decreasing quantity, in consequence of the rule made in 1877. The loan capital amounted to 8,979*l.*, of which 873*l.* was subscribed by the workers, and the interest paid on it was at the rate of 3¾ per cent. The profits, after paying interest on the loan capital and allowing 840*l.* for depreciation, amounted to 3,723*l.*, of which 1,111*l.* was appropriated to interest on the share capital, 1,277*l.* to bonuses to purchasers, 527*l.* to bonuses to workers, 60*l.* to education, 400*l.* to reserve, and 300*l.* to insurance, while 27*l.* was carried forward. Since its foundation, the society has done a total trade of 440,226*l.*, at a total profit, including interest on share capital, of 37,930*l.* Its employés are 290 in number. Neither purchasers nor workers are allowed to withdraw the share in the profits allotted to them until they have accumulated enough to buy 20*l.* worth of the share capital. No employé of the society can be elected on the committee. The rule on this point, however, might, according to Mr. Greenwood, be with advantage reconsidered with a view to its repeal. At present the committee is composed chiefly of such shareholders of the society as are employed as fustian cutters by other firms. Two years ago, the society obtained in open competition with private dealers a contract for 1,000*l.* worth of fustian garments from the Manchester Corporation, and made a good profit. The regularity of the demand for goods among the various co-operative societies, that are its chief customers, enables it to afford corresponding regularity of work to its employés, many of whom are members of trades unions. Its relations with its workers and their various organisations are good, and there have been no strikes or disputes.

(1) Digest, p. 18, and Appendix XXII. and XXXVI.–XL.

[§ 614.] The Co-operative Farming Association.

614. Before leaving this class of productive society, it is worth while to notice an attempt made to apply co-operation in this form to agriculture, in the case of the Co-operative Farming Association,(1) which was founded in 1890. It now owns 870 acres of land, situated between Paisley and Barhead, in Renfrewshire. The shares have been taken up by both societies and individuals to the extent of about 8,000*l.* worth. The technical management is in the hands of one man, but the financial and general control is exercised by a committee appointed by the shareholders. The profit remaining after all charges have been met is divided between wages and capital, in the same proportion per £ but there is a strong feeling in favour of limiting the profits of capital to 5 per cent. The farms are rented on a five years' lease. There is no hostility on the part of the landlords towards the scheme, but, in promoting it, there was some difficulty in combating the prejudices of co-operators against embarking their capital in what was to them a new form of industry. There are, at present, only two years' results, but, so far, the scheme promises to be successful.

The co-operative movement as a whole.

615. This concludes the review which it has proved possible to obtain from the evidence, of the origin, history, and present position of the two opposing movements that are comprehended under the term co-operative. It has been found possible to trace the steps whereby the movement of producers, though repeatedly worsted in an unequal struggle with its rival, yet, being at once too strong to perish and too weak to prevail, is now tending towards a union with the movement of consumers, based on a mutual recognition by each of the essential principles of the other. It now only remains to summarise those portions of the evidence which deal with the co-operative movement as a whole, showing its general financial position, the nature of the common organisation by which it is governed, the demands it makes on the Legislature, and its relations with trade unionism.

Its general financial position.

616. It appears from the figures furnished by Mr. Mitchell,(2) that the total number of societies comprehended in the movement, including distributive societies, retail and wholesale, productive societies, and supply associations, at the end of 1891, was 1,624. Their combined membership was 1,191,369. Their share capital was 13,258,482*l.*, their loan capital 3,053,573*l.*, their reserve 730,049*l.*, their saleable stock 5,569,027*l.*, their land, buildings, and fixed stock, 6,427,203*l.* The amount allowed for depreciation during 1891 was 287,106*l.* Their investments were 6,541,587*l.* The amount received for goods sold during 1891 was 48,571,786*l.* The trade charges during 1891 were 2,626,940*l.* The total net profit during 1891 was 4,774,030*l.* The amount applied for educational purposes was 32,942*l.* The amount applied for charitable purposes during 1891 was 11,435*l.*; and the subscriptions of the central board were 4,700*l.* 18*s.* The societies do not pay income tax on their profits, because the large majority of their members, not being liable to the tax, would claim to have returned to them individually what had been taken from them in this way collectively. Mr. Walker,(3) representing the Traders' Defence Association of Scotland, desired the Legislature to make every society a unit for the purpose of income tax, without allowing rebate to the members, but Mr. Mitchell(4), characterised the proposal as unjust. It appears from the returns issued by the chief Registrar of Friendly Societies that, during the 30 years ending 1890, the number of members of co-operative societies had increased over tenfold, and the share capital over twenty-seven fold. The sales had grown from 2,349,055*l.* to 35,367,102*l.*, and the profits from 165,562*l.* to 3,393,991*l.* per annum. The trade stocks are turned over more than eight times a year. Mr. Walker,(5) considered that co-operative societies ought to be compelled to have their accounts audited by a public official.

Its general organisation: the Co-operative Union.

617. The administration of the movement is in the hands of the Co-operative Union(6), an organisation that has grown up out of the practice, commenced in 1867, of holding annual conferences among independent co-operative societies. Similar conferences, indeed, had been held intermittently before that date. As far as can be ascertained, the first co-operative congress was held at Manchester, in May 1830, when 56 of the 260 societies then in existence sent delegates, representing about 3,000 members, who had amongst them accumulated a capital sum of 6,000*l.* after less than 15 months' trading. The Co-operative Union has recently been registered under the Limited Liability Act, in order to get its property out of the hands of trustees, and so to acquire the security and permanency of a corporate body. Its objects are the consolidation of existing co-operative effort, and the general promulgation of co-operative principles and practice.

(1) Digest, p. 10, and Appendix XXI. (2) Digest, p. 9. (3) Digest, p. 16, and Appendix LXXXIV. (4) Digest, p. 9. (5) Digest, p. 16. (6) Digest, p. 9, Appendix I and II.

[§ 617.] With these ends in view, it has organised the existing societies, first in the union itself; secondly, in sections of the same; and, thirdly, in sub-sections, called district associations. The latter generally consist of about 30 societies, situated within easy distance of one another, and they hold quarterly conferences, at which papers are read, and subjects affecting the welfare of the movement are discussed, while the union as a whole, convenes annually a congress of representatives from all the societies in its membership. These congresses are held in the district belonging to each of the various sections in town. Members of the Union are pledged, in the conduct of their business transactions, to keep in view the following principles:—First, the abolition of all false dealing, whether directly by representing any article produced or sold to be other than it is known by the producer or vendor to be, or, indirectly, by concealing from the intending purchaser any fact material to his ability to judge the value of the article he proposes to purchase. Secondly, the conciliation of the conflicting interests of capitalist, worker, and purchaser, by an equitable division among them of the fund commonly known as profit. Thirdly, the prevention of the waste of labour that results from unregulated competition.

Its legislative programme and Parliamentary Committee.

618. For the purpose of pressing upon the Legislature the demands it appears from time to time expedient to make, the Co-operative Union has started a Parliamentary Committee on the same lines as the Parliamentary Committee of the Trades Unions.(1) This committee is at the present time engaged in promoting the following measures:—(*a.*) The amendment of the Factory Acts in such a way as to destroy "sweating." This result, the witnesses thought, might be obtained by abolishing domestic workshops, by the transfer of the patronage of public bodies from "sweating" to co-operative firms and by causing Government departments to divide their contracts into two parts, one for material and the other for labour, so as to enable workmen's co-operative associations, with small capital to take them up. The last mentioned policy, Mr. Maxwell (2) stated, had been adopted by the Italian Government, with the direct object of encouraging co-operation, and also by the Glasgow Town Council in respect of policemen's clothing. (*b.*) A Bill(3) relating to the purchase of leasehold enfranchisements. (*c.*) A Bill to abolish property qualifications in the election of public bodies. (*d.*) The amendment of the provisions of the Food and Drugs Act relating to the sale of patent medicines. (*e.*) The amendment of the Industrial and Provident Societies Act in certain points, especially by the repeal of section 9, which limits the amount of share capital each member may hold to 200*l.* In addition to its work in connexion with the legislature, the Parliamentary Committee(4) has appointed four of its members to act conjointly with a similar number appointed by the Parliamentary Committee of the Trades Unions, for the purpose of acting as mediators in disputes between co-operative societies and their trade unionist workmen, but the investigation of the mutual relations of the co-operative and the trade unionist movements must be preceded by an examination of the evidence relating exclusively to the latter.

Trade unions: their number, finances and characteristics.

619. Trades Unions, said Mr. Brabrook, are registered(5) under the special Acts applying to them. Employers' associations fall within the definition of a trade union contained in the Act of 1876, and can claim registration accordingly. Wherever branches are registered separately, they are treated as separate unions. The total number of registered unions is 493. The number making returns is 320. Of the rest, 66 are not yet liable to make returns, and steps are being taken to recover penalties from the remaining 107. During the past two years, 201 trade unions have been registered, whereas the total registration for the 19 preceding years was only 533 or an average of 28 per annum. Mr. Giffen(6) informed the Commission that, according to the latest returns, the aggregate membership of trades unions was 871,000, out of a total working population of 13,200,000, that their aggregate annual income was nearly 1,200,000*l.* or 27*s.* 6*d.* per member, and that the average individual income of each member was about 70*l.* per annum, the average income of each adult male in the United Kingdom being 60*l.* Mr. Brabrook(7) deplored the non-inclusion of trade unions under the Friendly Societies Act, on the ground that it was objectionable to allow them the benefit conferred by section 4 of the Trade Union Act of 1876, which forbids their members from suing them for breach of contract if they expend funds originally destined for benefits in strikes. On the other hand, it was pointed out by Mr. Ludlow(8) that trade unions, unlike friendly societies, did not make, and could not fairly be expected to make, the provision of sick, old age, and other friendly society benefits, their primary function. Their principal object, he contended, is, and ought to be, to maintain and advance the condition of the labourer, as such, in a particular employment, and though the use of that portion of their funds, originally set aside for benefits, for ordinary trade union purposes might sometimes cause great hardships, it should not be prohibited by law. The funds for management, benefits, and trade purposes cannot, he added, be kept entirely distinct, because, in case of a trade dispute, failure to amalgamate them may cause a defeat sufficiently overwhelming to ruin the union. Of course, if a union explicitly states in its rules that it will appropriate a certain portion of its funds to benefits, the undertaking must be carried out, but the enactment of such a rule is a very dangerous step for a Union to take. Members should recognise the fact that there must always be a certain element of uncertainty about the friendly society benefits granted by trades unions, although their secondary function of paying these benefits does serve the useful end of moderating their action in pursuit of their main object. The fact of registration is not equivalent to a Government guarantee that a Union is solvent and will appropriate its funds in a particular manner. Many labourers, no doubt, think it is, but it would be unadvisable to deny the unions the benefits resulting from registration, simply in order to prevent such misunderstanding. The time may come when members of trade unions will express a desire for power being given to the public authority to interfere with the appropriation of their funds, but it would be dangerous to give such power at the present moment when trades unions are dearer to the heart of the working class than any other form of association. In any case, it must be borne in mind that trade union officials can utilise the funds entrusted to them only in accordance with their rules, and the rules represent very fairly the views of the members.* [§ 619.]

Their policy its nature and results.

620. From the evidence given by Mr. Ludlow, in fact, it would appear that, whereas friendly societies are organisations for thrift, trade unions are essentially organisations for wages. From the evidence given by Sir Thomas Farrer(1), it appears further, what is the nature and what is the result of the policy which a desire to raise wages has led trades unions to adopt. According to this witness, the essence of that policy is protection, both national and local. National, because the more our foreign trade extends, the more difficult do the unions find it to make their control of wages effective, and local, because the more they restrict the area of competition, the more easy do they find it to acquire that control. The attitude of trade unions towards foreign trade has already been dealt with in connexion with State and Municipal Employment (paragraph 548) and their protective policy in respect of local industries is illustrated by the actions of their representatives on the London County Council. On one occasion, Sir Thomas Farrer said, the Bridges Committee recommended the Council to accept a London tender for a ferryboat, in preference to a tender made by a Glasgow firm, on the ground that it was "the first duty of the "Council, having regard to the depressed condition of "labour in London at the present time, to give to London "firms what work can reasonably be so given, in preference "to sending it to be done outside." In this instance, however, the Council disregarded the recommendation of its committee, and the order went to the Clyde. Again, on the 13th of December 1892, Mr. Burns moved the following resolution, amending a former resolution passed in 1889:—"That all contractors be compelled to sign a declaration "that they pay the *London* Trades Union rates of wages, "and observe the hours and conditions of labour recog-"nised by the *London* Trades Unions." As was pointed out at the time, the effect of this resolution would be to exclude all country contractors from competition, and an amendment was carried omitting the word "London" and substituting for the words after the word "recognised," the words "and in practice obtained by the trades unions "in the place or places where the contract is executed." Even in its amended form, the resolution has the effect of obliging the ratepayers of London to pay a larger price for their work than they need. Such, then, being the protective nature of the policy which the desire to raise wages has led trades unions to adopt, it remains to consider its results. On this point, also, it is necessary to turn for information to the evidence given by Sir Thomas Farrer in reference to the London County Council. By a series of resolutions, he said(2), passed between October, 1890, and

(1) Digest, p. 14. (2) Digest, p. 12. (3) Digest, p. 14. (4) Digest, pp. 14 and 27. (5) Digest, p. 37, and Appendix LVI., LVII., and LVIII. (6) Digest, p. 43. (7) Digest, p. 37. (8) Digest, p. 37.

* Since the evidence here summarised was given, an Act has been passed, intituled the Trade Union (Provident Funds) Act, 1893, which exempts the funds applied solely for benefits from income tax.

(1) Digest, p. 24. (2) Digest, p. 25, and Appendix CXXXIX.–CXLI.

[§ 620.] November, 1892, the London County Council has abolished overtime and limited the working week of its employés in the parks, gardens, and open spaces to six days, except in cases of absolute necessity, and since the natural effect of this would be to reduce the sums earned, it has increased the rates of wages to an extent sufficient to cause an addition to the wage-bill of between 5,000*l.* and 6,000*l.* a year. In so doing, the Council has adopted the principle of a minimum rate of 6*d.* per hour, without reference to the value of the work performed. It is the ambition of the Council to take over the management of a great many large undertakings in which a vast amount of labour is employed. But if, in taking them over, it is to increase its wage-bill in respect of them to the same extent as it has done in the case of the parks, &c., the additional expense will more than counterbalance whatever economies will be effected by the amalgamation of staffs and the suppression of official salaries and directors' fees. In short, desiring by its example to raise wages throughout the industrial world, the London County Council has adopted a policy that would involve a private firm in bankruptcy, and in defiance of the fact that both wages and profits must ultimately be paid out of the produce, and that it is only by increasing production that wages can be permanently and universally raised. In other words, it is impossible to divide a shilling amongst 12 men in such a way as to give 2*d.* to each.

The old and the new trade unionism.

621. Much has as been made of the distinction between what is called the old and the new trades unionism, the unionism of the artisan and the unionism of the unskilled labourer, it has not been found possible to extract from the evidence any such clear and full account of the origin and nature of that distinction as was found to be possible in the case of the similar, and, in some respects, corresponding, distinction between consumers' and producers' co-operation. Indeed, it appears from the evidence of Mr. Fenwick,[1] representing the Parliamentary Committee of the Trades Union Congress, that the two kinds of unionism, unlike the two kinds of co-operation, are not divided by a difference of principle at all. It is, perhaps, possible to trace a certain difference of policy, such as a greater tendency to strikes and a greater belief in the efficacy of legislative interference among the unions of the labourers as contrasted with the unions of the artisans, but this difference of policy would seem to be due to a difference in circumstance rather than to a difference in aim.

The Trade Union Congress.

622. It certainly does not imply a difference in general organisation. The Trades Union Congress is attended by trades unions of both classes alike, and every year formulates a programme, which may be taken as embodying their collective policy. This congress, said Mr. Fenwick,[2] was first convened at Manchester, in 1868, and has met every year since, except 1870. Its first assembling was occasioned by two circumstances. The first was the appointment, in 1867, of a Royal Commission "to inquire "into the organisations and rules of trades unions and "other associations, whether or workmen or of employers, "and into the effects produced by such unions and "associations on workmen and employers respectively, and "on their mutual relations, and on the trade and industry "of the country." The second was the awkward position in which trades unions found themselves placed by certain judicial decisions, pronounced during the same year, to the effect that all combinations that were in restraint of trade were criminal, and that societies having rules enabling them to act in restraint of trade could hold no property, even for benevolent and charitable purposes. The first congress was attended by 34 delegates, representing 118,367 members, and its success encouraged its promoters to convene a second at Birmingham in the following year, which was attended by 48 delegates, representing an aggregate membership of 250,000. Among the chief subjects considered by this congress was the unprotected state of trades union funds. Such questions as piece-work, overtime, protection of miners, conciliation and arbitration, and the necessity for a system of national education were also discussed, and the question of labour representation in Parliament was first declared at this congress as a distinctive policy of the unions. In 1874, the miners of Northumberland gave practical shape to this policy by electing Mr. Thomas Burt member for Morpeth. No congress was held in 1870, but, in 1871, the third meeting took place in London, when 50 delegates were present, representing a membership of 289,430. It was at this meeting that a Parliamentary Committee of five persons (afterwards increased to 11, including the secretary) was first appointed to prepare legislation, and take such action as the congress might from time to time determine. The fourth congress was held in the town of Nottingham in January 1872. The three previous meetings had been held in the months of March, June, and August; but it was deemed advisable, on the occasion referred to, for the congress to meet in January, so as to be ready with a programme of work for the ensuing sesson of Parliament. The committee elected at Nottingham were instructed to prepare standing orders for the government of future congresses, and thereby permanency was given to an institution which, so Mr. Fenwick intimated, has been not inappropriately termed the "Parliament of Labour." The next meeting took place at Leeds, in 1873, and the questions considered were compensation for injuries to workmen and the Mines Regulation and Arbitration Acts of the previous year. The Sheffield Congress, in 1874, dealt chiefly with the Criminal Law Amendment Act of 1871, the Masters and Servants Act of 1867, the Conspiracy and Protection of Property Act, the Trade Union Act of 1871, and the necessity for an amendment of the Factory Acts. The questions considered by each succeeding congress, since the meeting in Glasgow in 1875, have been very similar with the exception of that held in 1888, at Bradford, where an important debate took place on the subject of a legal eight hours' day for all workers, and, since then, this question has continued to excite more interest in the congress' debates than any other subject it has to consider. At the Glasgow Congress, in 1892, the following order was made, which will have the effect of altering the basis of representation for the future:—"Trade societies, by what- "ever name they shall be known, shall be entitled to one "delegate for every 2,000 members, or fraction thereof, "provided always that they have paid 1*l.* for every 1,000, or "fraction thereof, and 1*l.* for every additional 1,000 or frac- "tion thereof, towards the expenses of the Parliamentary "Committee for the past year, and 10*s.* for their delegates' "fees. Trade councils, or like organisations, made up of a "number of branches or trades, shall only send represen- "tatives and be called upon to subscribe as aforesaid, for "those members that are not directly represented through "their own respective trades or associations." It is further enacted that delegates must be members of the trades they represent. The duties of the Parliamentary Committee are to watch all legislative measures directly affecting the interests of labour, to initiate, whenever necessary, such legislative action as the congress may direct, or as the exigencies of the time and circumstances may demand, and to discharge special functions, such as the conduct of the *plebiscites*, &c., which the congress may from time to time determine. The principal measures that the Committee is, at the present moment (January, 1893,) principally engaged in promoting are the amendment of the Employers Liability and the Conspiracy and Protection of Property Acts, and the limitation of the hours of labour. In regard to the Employers Liability Act, the Parliamentary Committee has received instructions to endeavour to secure the abolition of the doctrine of common employment, and of contracting out of the Act, and the extension of the Act to seamen. In regard to the Conspiracy and Protection of Property Act, the Committee has been instructed to secure verbal definition of the term "intimidation" which shall include only such intimidation as would justify a justice of the peace, on complaint being made to him, in binding over the person so intimidating to keep the peace. In regard to the limitation of the hours of labour, the instructions are as follows:—"That the Parliamentary Committee "promote a Bill regulating the hours of labour to eight "per day, or 48 per week, in all trades and occupations "except mining, which Bill shall contain a clause enabling "the organised members of any trade or occupation, pro- "testing by ballot against the same, to be exempted from "its provisions." The exception as to miners was introduced, because they did not want the provisions of the Bill they were promoting on their account to be tacked on to a Bill relating to other industries. Steps have been taken to insure the resolutions about to be submitted to the congress coming before the Parliamentary Committee six weeks before the meeting, thus making it possible to place such resolutions before the branches previously to the election of delegates.

[§ 622.]

Mutual relations of working men's organisations.

623. The foregoing examination of the evidence relating to trades unions completes the review which it has been found possible to obtain of each of the four classes of workmen's organisations considered separately. But before concluding the section of which they collectively form the subject, it remains to discover what information the evidence affords as to their mutual relations. From what has already been stated, it appears that all these organisations have for their object in some form or other the pecuniary benefit of the workman, but that each pursues this object in a different manner. Thus, friendly societies may be defined as organisations for insurance, building

[1] Minutes of Evidence, 7313-9. [2] Digest, p. 26.

[§ 623.] societies as organisations for investment, co-operative societies organisations for profits, and trades unions as organisations for wages. Of these, the two first may be classed together as organisations for savings, and contrasted with the two last, which may be described jointly as organisations for earnings. From the evidence given by Messrs. Mann and Hyndman as to the relative advantages of expenditure and thrift (and already summarised in paragraph 508, relating to the effect of thrift upon wages) it would seem as if there existed a certain antagonism between these two classes. On taking each class separately, for the purpose of comparing the two groups of which each is composed, it will be found that concerning the relations between the friendly and the building societies, no evidence was given. It only remains, therefore, to examine the evidence dealing with the relations between the co-operative societies and the trades unions.

Relations between co-operative societies and trade unions.

624. Considerable light will be thrown upon the meaning of that evidence by presenting it in connexion with what has gone before. In the case of the co-operative societies it has been seen that, although originally intended for the benefit of the producers, their most successful practical development has been on the lines of societies for the benefit of the consumers only, and that a sharp conflict of interests has sometimes arisen between them and the trades unions which represent their workpeople. Indeed, the establishment of a Joint Board of Conciliation by the two Parliamentary Committees, though referred to by Mr. Fenwick(1) as indicating the friendly footing on which the conflict is being conducted, is in itself a clear proof that the conflict exists. And, though it has also been seen that this conflict is solved in the case of co-partnership societies, by securing for the workpeople a share in the profits, the co-operative organisation still remains essentially an organisation for profits, and, as such, in theoretical opposition to trades unionism, the organisation for wages. To raise wages, said Mr. Mitchell, is the function of trades unionism; co-operation seeks only to increase the purchasing power of the wages received.(2) At the same time, it must be noticed that the representatives of all phases of the co-operative movement gave a most emphatic denial to the assertion sometimes made that it is the policy of co-operators to increase the fund of profits at the expense of wages. Thus Mr. Mitchell stated that the Committee of a Co-operative Society, in their capacity of working men, set their faces against any cheapness which might be obtained by paying low wages(3), and it appears to be a general rule that co-operative societies should pay the trades union rates of wages, or in some cases even above those rates(4). And on the other hand it is admitted by the co-operators that the trades unions have usually adopted a friendly and conciliatory attitude towards their societies(5). Seeing, however, how fundamental a difference exists between the aims of the two movements, it is not surprising to find their representatives enunciating economic policies, each the direct contrary of the other. Thus, Mr. Maxwell(6) said: It would be a great advantage to entirely supersede the wages system by the system of profit-sharing, under which the worker is responsible, not only for his labour, but also for the extraction of a profit out of that labour. *It* earned under the latter system would be more valued by an intelligent man than the same sum earned without risk in the form of wages. On the other hand, Mr. Mann(7) said: Provided that the workmen desired it, the complete elimination of all profit and interest would be no bad thing; there is no reason to suppose that it would have a bad effect upon the prosperity of national industry. But what does seem at first sight surprising is to find co-operators and trade unionists combining to prophesy the ultimate cohesion of the two movements, and to make a common proposal with that end in view. The proposal is that the funds of trade unions, which at present can be lent only on such security as their trustees are authorised by law to accept, should be made available for investment in the productive enterprises promoted in connexion with the co-operative movement. And, what is still more surprising, is that the making of this joint proposal is not accompanied by a surrender on the part of either organisation of a single one of its original pretensions. The representatives of each still entertained the desire, even though they abandoned the hope, of a future absorption by their own movement of the entire industry of the country to the logical extinction of the other, and, in making the above proposal, were careful to explain the nature of the mental reservations with which they made it. Thus, Mr. Maxwell(8) said: The proposal as to the investment of trade union funds in co-operative productive enterprises is made in the interests of both unionism and co-operation alike. Unionists would gain the co-operators' knowledge of the employers' side of the case, and strikes would in consequence be prevented and mitigated, while co-operators would find in the number and ubiquity of the unionists a means of effecting a rapid and immediate advance towards their main object—the control of the industry of the country. And Mr. Mitchell(1): There would be no objection to the amendment of the Trades Union Acts in such a manner as to admit the investment of union funds in productive co-operative enterprises. Such permission, however, should, if granted, be utilised with the greatest caution, in view of the importance, too apt to be underrated, of avoiding the risk of such funds in undertakings where success is as yet uncertain. Mr. Mann,(2) moreover, speaking from the trade union point of view, while extending a warm welcome to the productive co-operative societies, which he hoped would rise up to compete with syndicates that traded unfairly, and while approving most heartily(3) of the principle of profit-sharing, and still more heartily of the principle of industrial partnership, the two principles on which co-operative production is worked, qualifies his approval in words to the following effect: The process of the introduction of both these principles, however, incidentally involves a tendency to lift the section of men to whom they are applied out of the ranks of the general army of labour, and so to hinder the progress of the movement which it is desirable to accelerate. In these circumstances, therefore, it seems necessary to examine the evidence with a view to discovering why a proposal so unanimously qualified was so unanimously made. The explanation which appears most probable is confirmed by the following passages. The first is that in which Mr. Maxwell,(4) after expressing the wish before referred to for the complete substitution of profit-sharing for wages as a method of industrial remuneration, says: At the same time, the workers are not yet willing to run the risk of allowing the wages system to be entirely superseded. The second is that in which Mr. Mann,(5) while pleading for the complete elimination of profits, states: The arbitrary fixing of rates of wages by Parliament, even at a high figure, and with the direct intention of transferring a portion of the profits to the pockets of the workers, is not desired by the large though diminishing majority of the workers that think it undesirable to destroy profits altogether. And the third is that in which Sir Thomas Farrer(6) says: Members of trades unions have hitherto been taught to look upon themselves too much in the light of producers, but there are signs, such as their repudiation of the action of their leaders in approving of the Sugar Convention, that they are learning from their co-operative societies to look upon themselves as consumers as well. Reading these passages together, therefore, and connecting them with what has gone before, it appears impossible to doubt that the policy of alliance between the co-operative and trade union organisations is the policy of the workman himself, who perceives that both movements are serving his interests, and is determined to utilise both of them.

[§ 624.]

3. CONCILIATION, ARBITRATION, AND MEDIATION.

Conciliati arbitratio and medi tion: hov they are related.

625. From a general view of the entire evidence given before the Commission, it would appear that conciliation, arbitration and mediation constitute collectively the only possible alternative to strikes as a method of settling disputes. Relatively to each other, however, it would appear that they are not so much alternative as complementary. The mediator brings the parties together, and so makes conciliation possible, and the conciliation board refers to the arbitrator the issue which it has proved itself incompetent to decide. But mediation that does not result in conciliation is a failure, and arbitration that does not issue from conciliation is powerless.

How far they are effectual popular.

626. Such, then, being the nature of the device which organisation has created for avoiding the industrial warfare that gave it birth, it is necessary to examine the evidence with a view to discovering how far it is effectual and popular, and how it can best be utilised. It was the opinion of Mr. Allan,(7) of the firm of Messrs. Allan and Co., marine engine builders, Sunderland, that it was neither effectual nor popular. There is great confidence in some quarters, he said, that arbitration and conciliation will effectually deal with all labour differences. So far, however, neither method has completely won the favour of the workmen. Arbitration, indeed, they invariably mistrust, for they imagine, and often rightly, that the arbitrator is not sufficiently practical to enter into all the bearings of the questions submitted to him, and that,

[§ 626.] being chosen from the educated and professional class, he is more likely to be biased, consciously or unconsciously, against them than in their favour, and the result is that they seldom accept an adverse decision contentedly. With conciliation boards, he went on to say, the same objection holds good, though to a less degree. While it would doubtless be very difficult to suggest a better method of settling disputes than by a means of a board whose members possessed power to bind their constituents, yet it is very problematical whether any momentous difference would be entrusted to a body of delegates, or whether, if it were so entrusted to it, an adverse decision would be acquiesced in. The men are very reluctant to leave the settlement of a far reaching dispute on the hands of a few delegates, who may be over-ruled owing to a certain want of skill in argument and in the deep ways of bargaining. Not only are conciliation and arbitration in but scant favour with workmen generally, he added, but they are also impossible to work properly, as things are at present constituted, owing to the absence of any means of furnishing arbitrators or boards with adequate *data* on which to found their decisions. To be of any service, such *data* must include a knowledge of the average profits of the employers in the trade, and this is precisely the information which employers object to furnish, even to their own associations,—associations lacking the essential element of identity of interest which the organisations of the men possess.

he London abour onciliation oard.

627. On the other hand, Mr. S. B. Boulton,(1) senior partner in the firm of Burt, Boulton, and Haywood, chemical manufacturers, and member of the Council and Executive Committee of the London Chamber of Commerce, gave the following account of the origin and working of the London Labour Conciliation Board established by that body, which tended to show that arbitration and conciliation might be made both popular and effective as well. During the great dock strike of 1889, he said, the Council of the Chamber of Commerce received a vast number of applications to arbitrate, and was induced in consequence to appoint a committee to consider the practicability of establishing a permanent court to deal with such cases. As the result of 18 months' inquiry, the London Labour Conciliation Board(2) was formed on the following lines:—There is absolute equality of representation between employers and employed, and at any meeting of the board the number of representatives of each party voting must be the same. For the election of the men's representatives all the metropolitan trades unions in membership, some 60 in number, are classified in 12 groups. Each union in each group appoints a delegate, and the delegates elect a representative for the group. The 12 persons thus chosen serve on the board in conjunction with 12 employers' representatives nominated by the Chamber of Commerce. Four extra members, viz., the Lord Mayor or his nominee, the chairman of the London County Council or his nominee, and two others appointed by the labour representatives already elected, make up the full board of 28. The large number of trades unions that support a board established by the employers is a most striking and encouraging fact. The functions of the board are defined as follows:—"To promote amicable methods of settling "labour disputes and the prevention of strikes and lock-"outs generally, and also especially in the following "methods:—They shall, in the first instance, invite both "parties to the dispute to a friendly conference with each "other." "In the event of the disputants not being able "to arrive at a settlement between themselves, they shall "be invited to lay their respective cases before the board." "Or, should the disputants prefer it, the board would "assist them in selecting arbitrators." "The utmost "efforts of the board shall in the meantime, and in all "cases, be exerted to prevent, if possible, the occurrence "or continuance of a strike or lock-out." "The London "Conciliation Board shall not constitute itself a body of "arbitrators except at the express desire of both parties to "a dispute, to be signified in writing, but shall in prefer-"ence, should other methods of conciliation fail, offer to "assist the disputants in the selection of arbitrators chosen "either from its own body or otherwise. Any dispute "coming before the board shall, in the first instance, be "referred to a conciliation committee of the particular "trade to which the disputants belong." "To collect "information as to the wages paid and other conditions "of labour prevailing in other places where trades or "industries similar to those of London are carried on, and "especially as regards localities, either in the United "Kingdom or abroad, where there is competition with the "trade of London. Such information shall be especially "placed at the disposal of any disputants who may seek "the assistance of the London Conciliation Board." At first, the board(1) decided never to interfere in a dispute unless application were made to it, but, after some experience, it was found expedient to issue invitations couched in identical terms to both parties. The board adopts both the method of conciliation, which includes all cases where its functions stop short of the actual issue of an award, and the method of arbitration, whereby an award is issued. In the latter case, it expects the contending parties to sign an agreement promising to abide by its decision. Of cases where the former method has sufficed, a good example is furnished by the dispute that took place at Oliver's Wharf(2) in consequence of the refusal of the men to handle goods destined for Hay's Wharf, where a strike was proceeding. A large number of men were locked out in consequence, and their leaders, Messrs. Mann and Tillett, applied to the board to secure their restoration to work. After some difficulty, the proprietors of Oliver's Wharf were persuaded to meet the men's representatives at the Chamber of Commerce, where the whole matter was discussed. From the first, it was evident that the men were in the wrong, because a large number of them, being weekly servants, had broken an existing contract, a fact which Messrs. Mann and Tillett were willing to admit. Under the influence of the board, however, an agreement was signed by both parties, whereby the men undertook that their refusal to deal with goods on the ground of their connexion with boycotted wharves should not be repeated, and the employers that they would reinstate as many men as they still had vacancies for. Another example of a dispute settled by conciliation through the agency of the board was one in which the parties concerned were the United Bargemen's and Watermen's Protection Society of the Medway(3) and the Cement Manufacturers' Association of the Medway. Trade had improved, and the men applied for an advance in wages. Some advance the masters were willing to concede, but no agreement could be made as to its amount, and a strike of considerable magnitude seemed imminent, which would have thrown out of work, not only all the cement bargemen on the Medway, but also a large number of the men employed at the cement works. In this case, it was the employers who made application to the board. Formal invitation was accordingly issued both to the union officials and to the committee of the Masters' Association, and a meeting took place at the Chamber of Commerce. First of all, it seemed impossible to make any progress, but after a while, and by dint of a little mutual good humour and passing over some of the more contentious points, about half the list of articles in dispute was got through before 11 p.m., when an adjournment took place. At the next meeting the whole list was disposed of, and an agreement was signed by both parties, containing a clause to the effect that no alteration should take place in the rates then fixed without three months' notice. After a year had elapsed, however, trade got a good deal worse again, and the employers wished to have a reduction. So they called the men together, and the list was revised and a fresh agreement drawn up. Unfortunately, the employers refused, on this occasion, to sanction the insertion of a clause requiring three months' notice, and the result was that, upon the next decline of trade, the agreement was broken. Of the action of the board in the direction of arbitration two examples may be given. The first is furnished by the dispute that took place about 18 months ago between the Amalgamated Society of French Polishers, (4) and Messrs. Brinsmead, the pianoforte manufacturers, concerning wages, and as to whether payment should be made by the day or by the piece. The board suggested the method of conciliation, but, as both parties wished for arbitration, it appointed three persons to arbitrate. Of course, it would have been open to the disputants to have made the appointment themselves, but they preferred to leave the task to the organising committee. The arbitrators decided "that the system of piece-work be continued "at Messrs. Brinsmead's manufactory, provided that the "payment for the same be fixed upon the new and "increased scale of prices agreed upon on the 14th of "October 1890." This award was accepted by both parties, and has been in operation ever since. Another case of arbitration arose out of a dispute between the Amalgamated Society of Watermen and Lightermen of the River Thames,(5) and the firm of Messrs. Francis & Co., Limited, cement manufacturers. A number of questions were involved as to freights, "lay-by" money, &c., and the board, on having its invitation to intervene accepted, recognised the necessity of referring the matter

[§ 627.]

(1) Digest, p. 31. (2) Rules and Bye-laws of the London Conciliation Board, and Appendix LXXV. and LXXVI.

(1) Digest, p. 31. (2) Appendix LXXVIII. (3) Appendix LXXIX. (4) Appendix LXXX. (5) Appendix LXXXI.

[§ 627.] to persons possessed of technical knowledge. It, accordingly, appointed as arbitrators three working men and employers connected with the industry, but not concerned in the dispute. The award they issued was accepted by both parties, and has ever since continued in operation. Hitherto, the arbitrators, appointed by the board from time to time, have always come to unanimous agreements as to the terms of their award, but, if they ever fail to do so, some provision will have to be made for the appointment of an umpire. No such provision, however, at present exists, and the chairman has no casting vote. The persons appointed to arbitrate should, as far as possible, be connected with the trade which the dispute concerns. It is sometimes difficult to find persons exactly answering to this description who are at the same time disinterested, but it is generally possible to obtain men possessing a sufficient technical knowledge, even though not immediately connected with the trade in question. Cardinal Manning and Lord Brassey, both of whom have had considerable experience as arbitrators in trade disputes, have expressed a preference for the appointment of persons acquainted with the trade in question rather than of absolute outsiders. It would not be possible to give third parties, even when directly interested in the issue of the struggle, any actual *locus standi* on boards of conciliation or arbitration, but the mere existence of such a board serves to protect their interests by making the party to the dispute refusing to submit to its decision as their enemy. Scarcely a week passes without some application being made to the board. In some cases it does not succeed in bringing the parties together, in others it succeeds in bringing them together but cannot make them agree, but only in a few cases does it fail to secure a settlement either by conciliation or by arbitration. In addition to the central board, it is part of the scheme to eventually set up separate committees in connexion with each of the metropolitan trades, but, at present, very little progress has been made in this direction, because disputants show a marked preference for the central board. Last summer, there was a congress of the Chambers of Commerce of the whole empire, which passed following resolution in favour of the establishment of boards of conciliation:—
" Resolved that this frequent recurrence of labour disputes
" has caused and is causing great damage to the commercial
" and manufacturing interests of the empire. That it is
" extremely desirable, in the best interests both of employers
" and of employed, that the re-adjustment of the rates of
" wages and of the conditions of labour, which from time to
" time is inevitable, should be brought about without the
" wasteful and calamitous results proceeding from strikes
" and lock-outs. And that this congress strongly recom-
" mends the formation of properly constituted boards of
" labour conciliation and arbitration in all important
" centres of industry and commerce throughout the
" empire." Similar resolutions have been passed at the half yearly meetings of the Associated Chambers of Commence of Great Britain, and boards on the lines of the one established by the London Chamber have been formed, or are in process of formation, in the following towns:—Aberdeen, Bradford, Bristol, Cardiff, Croydon, Derby, Dublin, Dudley, Dundee, Edinburgh, Exeter, Glasgow, Gloucester, Greenock, Grimsby, Halifax, Hull, Keighley, Leeds, Liverpool, Manchester, Morley, Newport (Monmouthshire), Nottingham, Plymouth, Rochdale, Wakefield, Walsall, Wolverhampton, Worcester and Wrexham. In the case of trades spreading over large areas, *e.g.*, railways, mines, &c., there should be special boards for each.

Why the Arbitration Acts have failed.

628. Mr. Boulton(1) also pointed out the complete failure that had attended previous legislation on the subject, and attributed it to the fact that such legislation had proceeded on the principle of setting up arbitration boards as an alternative instead of a complement to the voluntary conciliation boards already in existence. The London Labour Conciliation Board, he said, desires the attention of the Commission to be called to two among the many Acts of Parliament that have been passed for the purpose of facilitating the settlement of labour disputes. These are the Acts of 1867 and 1872. The first is called " An Act to establish Equitable Councils of Conciliation." It does not deal in any way with questions relating to future rates of wages and conditions of employment, but merely with disputes arising out of agreements already existing. It has never been appealed to, and the failure may probably be attributed to the inelasticity of its provisions. For example, it specifies too minutely the composition of the boards, and details certain residential qualifications which would, in certain cases, exclude the men's most trusted leaders. In the Act of 1872, no reference is made to the Act of 1867. The two Acts, indeed, refer to different objects. That of 1867 refers to arbitrations concerning agreements already made, that of 1872 to those concerning the terms of future agreements. The latter has failed, like the former, doubtless because it ignores instead of utilising and strengthening, the boards already established by voluntary effort.

(1) Digest, p. 32.

[§ 628

Principl on whic future le lation should proceed.

629. The same witness (1) then proceeded to lay down the principles on which, in his opinion, further legislation on the subject should proceed. Future legislation in regard to labour arbitration, he said, should aim at strengthening the hands of voluntary boards by giving each of them, in express terms, the power of summoning witnesses and examining them on oath, and of inflicting money penalties for breach of contracts, such as now belongs to the Conseils de Prud'hommes, in France. A great advantage would result from the transfer of cases of this kind to the boards from the law courts, where the process of justice is comparatively slow and expensive, and where workmen are not represented on the Bench. The power to enforce awards by penalties should be restricted to questions concerning past agreements, for the experience of the past 500 years proves the invariable failure of attempts of outside authorities to settle the terms of such contracts in advance, except, of course, in cases where the acceptance of an award as to a future contract has itself been the subject of a contract made precedent to the arbitration. The proposed method of securing the observance of awards as to future agreements by a law forbidding picketing, even if unaccompanied by intimidation, against men proceeding to work under the terms drawn up by an arbitrator, would be strongly opposed by working men. A Central Arbitration Board established by Government, such as exists in Nova Scotia,(2) would do no good. In fact, it would do positive harm, for it would discourage the formation of the voluntary boards, which, in view of the failure that has invariably attended its past efforts, Government would act much more wisely by supporting than it would by constituting other boards itself. Mr. Tom Mann(3) did not share Mr. Boulton's objection to Government interference, but made suggestions for the constitution of a State Board of Mediation and Arbitration. These suggestions, however, were based upon a recognition of the principle already referred to, that mediation and arbitration, to be successful, must be complementary and not alternative to voluntary conciliation. As Mr. Fenwick(4) stated, the success of arbitration depends upon freedom. Mr. Mann(5) explained his views in words to the following effect: Joint committees of employers and employed should be established. If they failed to agree, appeal should be made to voluntary boards of conciliation established in connexion with the various trades and districts. Inasmuch, moreover, as these boards either fail to effect a settlement or are not formed at all, there should be in the background a Central Board of Mediation established for the whole country in connexion with the Labour Department. This board should be composed of six persons elected by the trades unions and six by the associations of employers, with a Government official to act as umpire. In order to encourage settlement between the parties as much as possible, this board should not be authorised to interfere, even if appealed to by the parties, until an outbreak of hostilities actually took place. Then, on receipt of an invitation from either side, it should arbitrate, but there are practical difficulties in the way of giving it power to enforce awards. If no appeal were made, it should wait for a fortnight, and then should investigate the matter on its own responsibility, and issue, as mediator, a recommendation as to the lines on which the quarrel should be composed, trusting to public opinion to secure the recommendation being carried into effect. The board should act as arbitrator only when appealed to, and only on condition of work being resumed on the original terms pending settlement. The evidence of Dr. Elgin R. L. Gould,(6) representing the Labour Department of the United States of America, as to the functions of Government in regard to labour disputes, affords a direct commentary on Mr. Mann's proposals. In most cases, said Dr. Gould, it would be found better to confine the functions of a labour department to the compilation of statistics. In exceptional cases, indeed, it is advisable for the head of such a department to intervene in a dispute, but he should always be allowed to use his own discretion in so doing, and should not be fettered with any legal obligation in the matter. In no circumstances, moreover, should he be empowered to issue an award. His interference should be limited, as is the case in Colorado and North Dakota, to the task of mediation, that is to say, to the work of a peacemaker without power of adjudication. A parlia-

(1) Digest, p. 32. (2) Appendix LXXXII. (3) Digest, p. 19. (4) Digest, p. 27. (5) Digest, p. 19. (6) Digest, p. 42.

§ 629.] mentary head of a labour department might be tempted to ulilise his authority as arbitrator, if such authority were conferred on him, for the benefit of the class that possessed the greatest influence with the political party for the time being in power. [§ 629.]

C. TRADE DISPUTES.

1. GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED.

partner- p co- rative ieties l their kpeople.

630. Very few of the witnesses made any addition to the evidence given before the committees under this section, and those few were all representatives of the co-operative societies. Generally speaking, the relations between the societies and their workmen were described as good, although, as will be seen hereafter, strikes have sometimes occurred. Such strikes, as might have been expected, seem to have been more frequent in consumers' than in co-partnership societies, where the workers share in both management and profits. Societies of the former class, indeed, claim, according to Mr. Vivian,(1) their representative, to have practically arrived at a complete solution of the conflict between capital and labour. That the workers appreciate the co-partnership system, he said, is proved by the fact that about 200 men have left the service of the English Wholesale Society's Boot and Shoe Works in order to work in the Leicester Co-operative Boot and Shoe Works. No friction exists between co-partnership societies and the trades unions; on the contrary, most of them have trades unionists on their committees of management.

umers' operative ieties l their kpeople.

631. As to the relations of consumers' societies with their employés, the only evidence bearing directly on the subject is that of Mr. Maxwell(2), and he confined his remarks to the case of the Scottish Wholesale Society, of which he is chairman. He said: About 1,800 persons are employed by the Wholesale Society in production and about 300 in distribution. No favouritism is practised in selecting workers from among the total number of persons seeking work. The society aims not so much at increasing its profits as at placing its workpeople in good conditions of employment. In all cases, the full trade union rates are paid, and where no such rates exist, higher wages are given than in private firms. The condition of the workshops is good, and the factory inspector has no improvements to suggest. In the shirt finishing department, no work is given out to be done at home. In order to induce the workpeople to come into the workshops provided by the society, an extra 3*d.* per 1*s.* is paid. There is no absolute rule against the employment of married women, but the managers have been given general instructions to discourage it. The hours follow the trade union rule where such a rule exists. Thus, in the boot and shoe and currying factories, the men work 52 hours per week; in printing, 50; in preserves, 53; in hosiery, 48. In the women's trades where the employés are not members of the Women's Provident and Protective League, which has fixed a number of hours, the hours are limited by the Wholesale Society to 44 per week, although it is permitted under the Factory Acts to work 56½. No half-timers are employed. In cases of sickness, employés of the society in receipt of "upstanding wages," *i.e.*, those that are paid for holidays, but are liable to be called upon to work overtime upon occasion for nothing, receive full wages for the first four and half wages for the four succeeding weeks of illness. These sick allowances are charged as expenses to the department in which the recipients are employed. Facilities are also afforded for enabling workers to buy food on the premises at cost price. The society has also erected for their use recreation rooms, supplied with newspapers and magazines. The necessity for providing old age pensions has not yet arisen, because co-operation has not penetrated down to the class likely to require them. Generally speaking, the relations of the Wholesale Society with its employés are good. Nowhere in Scotland can such regular work be obtained, and the knowledge that the directors are drawn from their own class, and that they themselves, if members of co-operative societies, can, through their delegates, review their policy at the meetings that take place every quarter, gives the workers a feeling of security that is absent in private employments. It is true that, as workers, they have no share in the management, and, in the opinion of the witness, the co operative ideal will not be perfectly realised till they get it. But, unlike the employés of the corresponding English society, they have a share in the profits, and their claim to a share in the management is being pressed upon the attention of the society, in confidence that such a reform would not result in a relaxation of discipline. The presence of workers on the board of management would prevent disputes. In the Paisley Manufacturing Society, at any rate, even the chairman of the board is an employé, and this society has been a great success and has not found discipline at all impaired by its policy in this respect.

(1) Digest, p. 15. (2) Digest, p. 11.

2. SPECIAL STRIKES.

Cost of strikes.

632. It appears expedient to preface this section with certain remarks made by two witnesses, Messrs. Giffen and Ludlow, which may with advantage be borne in mind in connexion with the history of any particular strike to which attention may be directed. Mr. Giffen's remarks referred to the possibility of exaggerating the significance of figures relative to the cost of strikes, and Mr. Ludlow's to the contrary effects which membership of friendly and other benefit societies has upon the desire to resort to them. Mr. Giffen(1) said: Taking all British trades collectively, the aggregate direct loss in wages due to strikes does not amount to one fifth of 1 per cent. of the wages paid annually, although the indirect loss arising from the effect of strikes upon foreign competition, &c. is much more serious. The average duration of a strike, moreover, is about three weeks, and the wages lost for so short a time can, in most cases, be made up for by the end of the year.

Effec of organisation on trade disputes.

633. And Mr. Ludlow said: (2) Membership of friendly societies affects the attitude of workmen towards their employers in two contrary directions. Involving, as it does, an obligation to pay a regular subscription, it both increases their interest in securing high wages, and, at the same time, makes them careful not to engage in conflicts likely to compel them to fall into arrears.

Strike among employés of the English Co-operative Wholesale Society.

634. No really important strikes were discussed by the witnesses. The only disputes that can be treated under this section are those referred to by the co-operative witnesses, and these acquire whatever interest they possess from the fact that they are illustrations of the imperfection of the co-operative solution of the labour question rather than from their possession of any very noteworthy features in themselves. Thus, Mr. Mitchell(3) cited, as an exception to prove a general rule of peacefulness, the case of a strike that occurred at the English Wholesale Society's boot and shoe works at Leicester. According to Mr. Mitchell, this strike was an affair of very little importance. It was, he said, directed solely against an obnoxious foreman, and was soon ended under an amicable arrangement involving a modification of the said foreman's position. According to the views of the Labour Association for Promoting Co-operative Production, however, the men's grievance was much more deeply seated than would appear from Mr. Mitchell's evidence, and a document(4) was forwarded on behalf of that body by Mr. Greening, who had compiled it from statements made by the workers concerned. *Cf.* Appendix on p. 378 refuting Mr. Greening's statement. The information contained in that document may be shortly summarised as follows:—The strike was not against a particular foreman, but against the management as a whole, and was the outcome of grievances of at least 10 years' standing. Some years' ago, the management had initiated the practice of giving out work to contractors that paid less wages than the statement list then in force, and, in order to get that work back, the men had consented to a reduction of the prices in that list on the understanding that no work was for the future to be given out to be done at rates below those in the list then revised. This agreement was nominally adhered to, but the management practically evaded it by sending work to be done at Enderby under a false classification. That is to say, the work which at Leicester would be regarded as first class work, and paid for as such, was given to the Enderby men as second class, and so on right down the list, and the Enderby men, being glad to get the work, made no objection to this arrangement. Whereupon, the management told the Leicester men that they must accept the same classification also, and, on their objecting to do so, threatened to send all the work, the class of which they disputed, to Enderby instead of getting it done in Leicester. The Leicester men then persuaded the Enderby men to ask the same terms as they were demanding for themselves, upon which the management sent one of its representatives to Enderby, promising to grant the request, but with a proviso to the effect that 1*s.* per dozen deduction should be made for carriage, and that the men should engage no boys to help them. Rather than lose the work, the Enderby men consented, whereupon

(1) Digest, p. 43. (2) Digest, p. 37. (3) Digest, p. 8. (4) Appendix CXXXVI.

[§ 634.] the Leicester men struck. Ultimately, however, the management agreed to demand only 6*d.* per dozen to be deducted for carriage, and so the affair ended.

Strikes among employés of the Scottish Co-operative Wholesale Society.

635. Mr. Maxwell,(1) moreover, recounted the only disputes that the Scottish Wholesale Society had ever had with its workpeople during the past seven years, in words to the following effect: In 1885, he said, a dispute arose in connexion with the boot factory. The society intended making certain classes of boots and shoes that were not enumerated in the Glasgow statement of prices, and the manager, having no precedent to guide him, fixed a price which the men refused to accept. The matter was soon arranged, however, by conference between the manager and a trades union official. Again, in 1888, a small dispute, lasting less than a week, took place in the cabinet making factory. The men were dissatisfied with the adjustment of the prices of certain articles, formerly made by hand, but now by a new machine. The men denied that the said machine did so much work as was claimed for it by the management. In 1890, finally, nine workers struck without notice for a uniform rate of wages instead of the payment according to merit offered by the society. The management were ultimately convinced of the justice of the men's claim, and conceded it. No other dispute has occurred. Mr. Hardern,(2) also, stated that the Oldham societies, being connected with the employers' association in the district, was obliged to assist in combating a general strike that took place in 1885 against a 10 per cent. reduction, lasted 13 weeks, and ended in a compromise involving a fall of 5 per cent. only.

Strikes among employés of co-partnership co-operative societies.

636. The absence of strikes, which the evidence showed to be the distinguishing mark of co-operative institutions generally, is still more conspicuous in the case of the co-partnership societies. Yet, even here, they are not absolutely unknown, although, according to Mr. Vivian,(1) only two have occurred in 23 years. The first, he said, was due to the objection of employés of the Paisley Manufacturing Society to the employment of women, a circumstance also mentioned by Mr. Maxwell(2); and the second took place in connexion with the Eccles Manufacturing Society(3), in April, 1890, but this society is one that does not practise the profit-sharing principle which it professes. [§ 636.]

(1) Digest, p. 11. (2) Digest, p. 14.

3. PICKETING AND INTIMIDATION, AND LEGISLATION RELATING THERETO.

Conspiracy and Protection of Property Act: amendment of.

637. Only two witnesses, Messrs. Boulton and Fenwick, gave evidence in regard to the subject of this section. The former(4) observed that the proposed method of securing the observance of arbitrators' awards as to future agreements by a law forbidding picketing, even if unaccompanied by intimidation, against men proceeding to work under the terms of the said award, would be highly unpopular with working men. And the latter(5) informed the Commission that the Parliamentary Committee of the Trades Union Congress had been instructed to secure a verbal definition of the term "intimidation" in the Conspiracy and Protection of Property Act, which should include such intimidation only as would warrant a justice of the peace, on complaint being made to him, in binding over the persons so intimidating to keep the peace.

GEOFFREY DRAGE,
Secretary.

APPENDIX.

ADDITIONAL EVIDENCE REBUTTING STATEMENTS MADE IN APPENDIX CXXXII., CONTAINED IN THE VOLUME, ENTITLED "APPENDIX TO MINUTES OF EVIDENCE TAKEN BEFORE THE COMMISSION AS A WHOLE."*

Co-operative Wholesale Society, Limited,
1, Balloon Street, Manchester,
February 14, 1894.

DEAR SIR,

On page 292 of the Appendix to the Minutes of Evidence taken before the Royal Commission on Labour, there is what purports to be a "statement of case of the "Leicester workers lately on strike at the Wholesale "Society's West-end Boot and Shoe Works," compiled by Mr. Edward Owen Greening.

We may say, in the first place, that the circumstances on which this statement is alleged to be based occurred some seven or eight years ago, the heading "lately on strike" is therefore, to say the least, very misleading.

The statement is simply a reprint of what was published at the time in question, and our present object is to protest against its now being put forward as in any way representative of the actual facts of the case. When the charges contained in the statement were first put forward they were disproved to our complete satisfaction by Mr. Butcher, the manager of our Leicester Shoe Works.

We invited Mr. Greening to come forward and substantiate his statements, and we gave him every facility for doing so, but without effect, and no proofs whatever were produced to, in any way, substantiate the charges he had made.†

We repeat our absolute denial of these charges, and we lodge our emphatic protest against a misleading and one-sided account of an old occurrence being now brought forward as representing a recent state of affairs at our Leicester works.

These statements by Messrs. Greening and Potter have been put in as evidence, without being read before the Commission, and although a general statement was made by Mr. Vivian, in giving evidence, as to the fact that there had been strikes, we had not the slightest idea that a statement of this kind was referred to, otherwise we should have asked for our witnesses to be re-called in order to refute this misleading evidence.

We trust you will be able to give due prominence to this denial and protest in the present or in any future publication that may be issued by the Commission.

Yours truly,
On behalf of the General Committee of the Co-operative Wholesale Society, Limited,
J. BRODRICK,
Accountant.

G. Drage, Esq.,
Secretary, Royal Commission on Labour,
44, Parliament Street,
London, S.W.

* [C. 7063.—III. A.], pages 292-3.

† A pamphlet, issued by the Co-operative Wholesale Society, Limited, in March 1887, entitled "The Leicester Shoe Works. A Statement, &c. . . . . ", has been handed in. This document gives Mr. Greening's statements in question, with replies thereto, in parallel columns.

INDEX TO SUMMARIES OF EVIDENCE (ORAL AND WRITTEN).

PART I. TRADES AND SUBJECTS.

[N.B.—The references refer to the paragraphs.]

Aarhus (Co-operation): 606.

Aberdare (Mining): 14, 19, 21, 23, 25, 35, 36, 37, 74.

Aberdeen: 627.

INTRODUCTORY.

6 8.] 638. Much of the evidence bore reference, more or less directly, to the various Acts of Parliament regulating the conditions of employment in various occupations, and, in some cases, the witnesses formulated definite amendments of the law. It has appeared expedient to present these portions of the evidence in a tabulated statement, giving, in parallel columns, the text of the Act and the specific amendments suggested. Owing to the large number of witnesses who have given evidence on the more important Acts, it has been impossible to enumerate in the Appendix the authorities for the amendments given. A full Index of reference to Acts of Parliament is appended to the Digests, from which information as to the authorities can be obtained. [§ 638.]

THE BUILDING SOCIETIES ACTS, 1874-1884.

Text of the Act.	Proposed Amendments.
639. *Section* 15 *of the Act of* 1874.—With respect to the borrowing of money by societies under this Act, the following provisions shall have effect:—	
(1.) Any society under this Act may receive deposits or loans, at interest within the limits of this section provided, from the members or other persons, or from corporate bodies, joint-stock companies, or from any terminating building society, to be applied to the purposes of the society:	
(2.) In a permanent society, the total amount so received on deposit or loan and not repaid by the society shall not at any time exceed two thirds of the amount for the time being secured to the society by mortgages from its members:	
(3.) In a terminating society, the total amount so received and not repaid may either be a sum not exceeding such two-thirds as aforesaid, or a sum not exceeding twelve months' subscriptions on the shares for the time being in force:	
(4.) Any deposits with or loans to a society under this Act, made before the commencement of this Act in accordance with its certified rules, are hereby declared to be valid and binding on the society, but no further deposits or loans shall be received by such society, except within the limits provided by this section:	I.—To make building societies in holding out promises to pay on demand, state that those promises are qualified by the provisions of the Act, limiting their power of borrowing to the amount of two thirds of their mortgages.
(5.) Every deposit book or acknowledgment or security of any kind given for a deposit or loan by a society shall have printed or written therein or thereon the whole of the fourteenth and fifteenth sections of the present Act.	II.—To apply to building societies the provision contained in the Industrial and Provident Societies Act, 1876, to the effect that no deposits repayable at less than two days' notice may be received.
	III.—To more strictly limit the amount of deposits a building society may have withdrawable at short notice.
Section 16 *of the Act of* 1874.—The rules of every society hereafter established under this Act shall set forth:—	
1. The name of the society, and chief office or place of meeting for the business of the society:	
2. The manner in which the stock or funds of the society are to be raised, the terms upon which paid-up shares (if any) are to be issued and repaid, and whether preferential shares are to be issued, and, if so, within what limits, if any, and whether the society intends to avail itself of the borrowing powers contained in this Act, and, if so, within what limits not exceeding the limits prescribed by this Act.	IV.—To omit the words "if any" after the words 'within what limits."

[§ 639.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 639.

Section 32 *of the Act of* 1874.—A society under this Act may terminate or be dissolved—

3. By dissolution with the consent of three fourths of the members holding not less than two-thirds of the number of shares in the society, testified by their signatures to the instrument of dissolution. The instrument of dissolution shall set forth:—

(*e.*) The names of one or more persons to be appointed trustees for the special purpose, and their remuneration.

V.—To make provision for control by the members of a building society over the trustees appointing under the instrument of dissolution.

Section 43 *of the Act of* 1874.—If any society hereafter formed under this Act, or any persons representing themselves to be a society under this Act, commence business without first obtaining a certificate of incorporation under this Act, or if any society under this Act makes default in forwarding to the registrar any returns or information by this Act required, or in inserting in any deposit book or acknowledgment or security for loan the matters required by section fifteen of this Act to be inserted therein, or makes a return wilfully false in any respect, the person or persons by whom business shall have been so commenced, or by whom such default shall have been made, or who shall have made such wilfully false return, shall be liable for every day business is so carried on, or for every such default or false return, upon summary conviction before justices at the complaint of the registrar, to a penalty not exceeding five pounds. If any society under this Act receives loans or deposits in excess of the limits prescribed by this Act, the directors or committee of management of such society receiving such loans or deposits on its behalf shall be personally liable for the amount so received in excess.

VI.—To make the provision as to penalties for making false returns more stringent.

VII.—To make provision for receiving penalties from a building society or its responsible officers without requiring the prosecutor to prove the offence in the case of an individual.

Section 44 *of the Act of* 1874.—One of Her Majesty's Principal Secretaries of State may from time to time make regulations respecting the fees, if any, to be paid for the transmission, registration, and inspection of documents under this Act, and generally for carrying this Act into effect. The registrar shall give his certificates in the forms contained in the schedule to this Act respectively.

VIII.—To give the Chief Registrar of Friendly Societies power, upon a proper requisition, to appoint persons to inquire into the affairs of a building society, or to call a special meeting of the society.

IX.—To provide a form of annual return for building societies, with provisions as to dates, &c.

X. To insert in the Act provisions similar to those of section 14 of the Friendly Societies Act, 1875.

XI. To include building societies under the Friendly Societies Act, 1875.

THE CANAL BOATS ACTS, 1877 AND 1884.

640. *Section* 1 *of the Act of* 1877.—After the expiration of 12 months after the commencement of this Act . . . a canal boat shall not be used as a dwelling, unless it has been registered in accordance with this Act.

The owner of a canal boat may register that boat with the registration authority herein-after mentioned as a dwelling for such number of persons of the specified age and sex as may be allowed under the provisions of this Act; and the boat shall be used as a dwelling only for the number of persons of the age and sex for which it is registered.

I.—That registration should be more uniform and systematic.

Section 2 *of the Act of* 1877.—The Local Government Board shall make regulations, and may from time to time revoke and vary such regulations—

(1.) For the registration of canal boats under this Act, including certificates of registration, and the fees in connexion with such registration; and

(2.) For the lettering, marking, and numbering of such boats; and

(3.) For fixing the number, age, and sex of the persons who may be allowed to dwell in a canal boat, having regard to the cubic space, ventilation, provision for the separation of the sexes, general healthiness and convenience of accommodation of the boat: . . . . . .

II.—That certificates of competency, to be granted by the Board of Trade rather than by the Local Government Board, and obtainable by a practical examination, should be required of all persons in charge of canal boats or lighters.

Section 6 *of the Act of* 1877.—A child in a canal boat registered in pursuance of this Act, and his parent, shall for the purposes of the Elementary Education Acts, 1870, 1873, and 1876, be deemed, subject as herein-after mentioned, to be resident in the place to which the boat is registered as belonging, and shall be subject, according to any byelaw in force under the said Acts in that place. Provided that if the parent satisfies the school board or school attendance committee having authority in that place, that the child is actually attending school, or is under efficient instruction in accordance with the said Acts, in some other school district, the said board

III.—That women and children should be prohibited from living or working on canal boats.

IV.—That permission to children under the age of 13 to work on canal boats should be limited to those that have passed Standard III. as defined in the Education Acts.

TEXT OF THE ACT.

PROPOSED AMENDMENTS.

[§ 640.] or committee shall grant him without charge a certificate to that effect, and thereupon he and his child shall be deemed, for the purposes aforesaid, to be resident in the school district in which the child is so attending school, or under efficient instruction, and shall be subject to any byelaw in force therein. The said certificate may, on application by the parent, be rescinded or varied by the school board or school attendance committee for the place to which the boat registered as belonging, and may be rescinded without application by any such board or committee, if they are satisfied, after due notice to the parent that his child is not properly attending school or under efficient instruction in the school district mentioned in the certificate. [§ 640.]

Section 5 *of the Act of* 1884.—The power to make regulations given to the Local Government Board by the principal Act and this Act, shall include power to the Education Department to make regulations with respect to the form of certificates or pass-books as to attendance at school to be used by children in canal boats.

Section 6 *of the Act of* 1884.—The Education Department shall every year report to Parliament as to the manner in which the Elementary Education Acts, 1870 and 1873, 1876 and 1880, are enforced with respect to children in canal boats, and shall for that purpose direct Her Majesty's Inspector of Schools to communicate with the school boards and school attendance committees in their district.

Section 3 *of the Act of* 1877.—Every canal boat when registered shall be lettered, marked, and numbered in some conspicuous manner (as directed by the regulations made under this Act), and such lettering, marking, and numbering shall include the word "registered," and the name of the place to which the boat is registered as belonging, and the registered number.

V.—That Mr. Plimsoll's mark shall be compulsory for all river craft, one inch of free board for every foot of draught of water being the minimum spare buoyancy.

Section 7 *of the Act of* 1884.—A canal boat shall not be deemed to be lettered, marked, and numbered in conformity with section three of the principal Act, unless it is so lettered, marked, and numbered on both sides of the canal boat, or in some suitable position on the stern of the boat, so that the lettering, marking, and numbering may be plainly visible from both sides of the canal wherein the boat may be.

Section 3 *of the Act of* 1884.—It shall be the duty of every registration or sanitary authority within whose district any canal, or any part of a canal is situate, to enforce within such district the provisions of the principal Act and this Act, and any regulations made thereunder by the Local Government Board; and every such authority shall, within twenty-one days after the thirty-first day of December in every year make a report to the Local Government Board as to the execution of the principal Act, and this Act, and of the regulations made thereunder as aforesaid, and as to the steps taken by such authority during the year to give effect to the provisions of the said Acts and regulations.

VI.—That inspection should be periodical.

Section 4 *of the Act of* 1884.—The Local Government Board shall in every year present a report to both Houses of Parliament as to the execution of the principal Act and this Act, and the observance of the regulations made by them thereunder; and shall cause inquiries to be made from time to time by one inspector or inspectors, to be appointed by them for that purpose.

VII.—That district sub-inspectors should be specially appointed for the administration of the Acts, one for every three or four counties.

Section 14 *of the Act of* 1877.—In this Act, unless the context otherwise requires . . . . the expression "canal boat" means any vessel, however propelled, which is used for the conveyance of goods along a canal as above defined, and which is not a ship duly registered under the Merchant Shipping Act, 1854, and the Acts amending the same.

VIII.—That the Acts should apply to all vessels concerned in inland navigation.

Section 10 *of the Act of* 1884.—If it shall at any time appear to the Local Government Board, on the representation of any registration or sanitary authority or of any inspector appointed under this Act, that the principal Act and this Act ought to apply to any vessel or class of vessels which would be within the definition of canal boat, contained in section fourteen of the principal Act, if such vessel or class of vessels were not registered under the Merchant Shipping Act, 1854, and the Acts amending the same, the Local Government Board may declare that the principal Act and this Act shall apply to such vessel or class of vessels, although the same may be registered as aforesaid, and thereupon the same shall be

TEXT OF THE ACT.	PROPOSED AMENDMENTS.
[§ 640.] deemed to be a canal boat or canal boats within the meaning of the principal Act and this Act, and the definition contained in section fourteen of the principal Act shall be amended accordingly.	[§ 640.]

THE COAL MINES REGULATION ACT, 1887.

641. *Section 75 of the Act of* 1887.—In this Act, unless the context otherwise requires, "boy" means a male under the age of 16 years.

I.—That "boy" should mean a male under 18 or 21 years.

Section 4 of the Act of 1887.—No boy under the age of 12 years, and no girl or woman of any age, shall be employed in or allowed to be for the purpose of employment in any mine below ground.

II.—That no boy under the age of 13 years, and no girl or woman of any age, should be employed in or allowed to be for the purpose of employment in any mine below ground.

III.—That no boy under the age of 11 years, and no girl or woman of any age, should be employed in or allowed to be for the purpose of employment in any mine below ground.

Section 5 of the Act of 1887.—A boy of or above the age of 12 years shall not be employed in or allowed to be for the purpose of employment in any mine below ground for more than 54 hours in any one week, nor more than 10 hours in any one day, nor otherwise than in accordance with the regulations herein-after contained with respect to the employment of boys in a mine below ground.

IV.—That a boy of or above the age of 12 years should not be employed in or allowed to be for the purpose of employment in any mine below ground for more than 60 hours in any one week.

Section 12 of the Act of 1887.—(1.) Where the amount of wages paid to any of the persons employed in a mine depends on the amount of mineral gotten by them, those persons shall be paid according to the actual weight gotten by them of the mineral contracted to be gotten, and the mineral gotten by them shall be truly weighed at a place as near to the pit mouth as is reasonably practicable.

V.—That the section should be amended.

Provided that nothing in this section shall preclude the owner, agent, or manager of the mine from agreeing with the persons employed in the mine that deductions shall be made in respect of stones or substances other than the mineral contracted to be gotten, which shall be sent out of the mine with the mineral contracted to be gotten, or in respect of any tubs, baskets, or hutches being improperly filled in those cases where they are filled by the getter of the mineral or his drawer, or by the person immediately employed by him; such deductions being determined in such special mode as may be agreed upon between the owner, agent, or manager of the mine on one hand, and the persons employed in the mine on the other, or by some person appointed in that behalf by the owner, agent, or manager, or (if any check weigher is stationed for this purpose as herein-after mentioned) by such person and such check weigher, or in case of difference by a third person to be mutually agreed on by the owner, agent, or manager of the mine on the one hand, and the persons employed in the mine on the other, or in default of agreement appointed by a chairman of a court of quarter sessions within the jurisdiction of which any shaft of the mine is situate.

VI.—That the permission extended to employers and employed to enter into an agreement respecting deductions for stone or substances other than the mineral contracted to be gotten should be withdrawn.

VII.—That no such agreement should be deemed to exist unless expressly made in definite terms.

Section 13 of the Act of 1887.—(1.) The persons who are employed in a mine, and are paid according to the weight of the mineral gotten by them, may, at their own cost, station a person (in this Act referred to as a "checkweigher") at each place appointed for the weighing of the mineral, and at each place appointed for determining the deductions, in order that he may on behalf of the persons by whom he is so stationed take a correct account of the weight of the mineral or determine correctly the deductions as the case may be.

VIII.—That it should be made illegal for an employer to make the removal of a particular checkweigher a condition of employment.

(2.) A check weigher shall have every facility afforded to him for enabling him to fulfil the duties for which he is stationed, including facilities for examining and testing the weighing machine, and checking the tareing of tubs and trams where necessary; and if at any mine proper facilities are not afforded to a checkweigher as required by this section, the owner, agent, and manager of the mine shall each be guilty of an offence against this Act, unless he proves that he had taken all reasonable means to enforce to the best of his power the requirements of this section.

IX.—That the term "facility" should include the provision of shelter other than that supplied by the pit's head.

(3.) A checkweigher shall not be authorised in any way to impede or interrupt the working of the mine, or to interfere with the weighing, or with any of the workmen or with the management of the mine; but shall be authorised only to take such account or determine such

X.—That checkweighers should be forbidden to give information to a third party about a man's time or output, without that man's consent.

TEXT OF THE ACT.

PROPOSED AMENDMENTS.

[§ 641.] deductions as aforesaid, and the absence of a checkweigher from the place at which he is stationed shall not be a reason for interrupting or delaying the weighing or the determination of deductions at such place respectively, but the same shall be done or made by the person appointed in that behalf by the owner, agent, or manager, unless the absent checkweigher had reasonable ground to suppose that the weighing or the determination of the deductions, as the case may be, would not be proceeded with: Provided always, that nothing in this section shall prevent a checkweigher giving to any workman an account of the mineral gotten by him, or information with respect to the weighing, or the weighing machine, or the tareing of the tubs or trams, or with respect to the deductions or any other matter within the scope of his duties as checkweigher, so always nevertheless, that the working of the mine be not interrupted or impeded.

[§ 641.]

Section 14 *of the Act of* 1887.—(2.) It shall be lawful for the owner or manager of any mine, where the majority of the before-mentioned persons (*i.e.*, the persons employed in a mine who are paid according to the weight of the mineral gotten by them), ascertained as aforesaid (*i.e.*, by ballot), so agree, to retain the agreed contribution of the persons so employed and paid as aforesaid for the check weigher, notwithstanding the provisions of the Acts relating to truck, and to pay and account for the same to the checkweigher.

XI.—That it should be *compulsory* for the owner or manager, &c.

Section 20 *of the Act of* 1887.—(2.) A person shall not be qualified to be a manager of a mine unless he is for the time being registered as the holder of a first class certificate under this Act.

XII.—That analogous regulations should be introduced in the case of foremen and roadsmen.

Section 21 *of the Act of* 1887.—(2.) Every person so nominated (*i.e.* every under-manager) must hold either a first class or second class certificate under this Act.

Section 23 *of the Act of* 1887.—(1.) There shall be two descriptions of certificates of competency under this Act (i) first class certificates, that is to say, certificates of fitness to be manager; and (ii), second class certificates, that is to say, certificates of fitness to be undermanager; but no person shall be entitled to a certificate under this Act unless he shall have had practical experience in a mine for at least five years.

(2.) For the purpose of granting in any part of the United Kingdom, to be from time to time defined by an order from the Secretary of State, certificates of competency for the purposes of this Act, examiners shall be appointed by a board, &c. . . . .

Section 49 *of the Act of* 1887.—The following general rules shall be observed, so far as is reasonably practicable, in every mine.

Rule 22. Where the timbering of the working places is done by the workmen employed therein, suitable timber shall be provided at the working place, gate end, pass bye, siding or other similar place in the mine convenient to the workmen, and the distance between the sprags or holing props, where they are required, shall not exceed six feet or such less distance as may be ordered by the owner, agent, or manager.

XIII.—That the words "gate end, pass bye, siding, "or other similar place in the mine convenient to the "workmen," should be omitted.

Rule 38. The persons employed in a mine may, from time to time, appoint two of their number or any two persons, not being mining engineers, who are practical working miners, to inspect the mine at their own cost, and the persons so appointed shall be allowed once at least in every month, accompanied, if the owner, agent, or manager of the mine thinks fit, by himself or one or more officers of the mine, to go to every part of the mine, and to inspect the shafts, levels, planes, working places, return air-ways, ventilating apparatus, old workings and machinery. Every facility shall be afforded by the owner, agent, and manager, and all persons in the mine for the purpose of the inspection, and the persons appointed shall forthwith make a true report of the result of the inspection, and that report shall be recorded in a book to be kept at the mine for the purpose, and shall be signed by the persons who made the inspection; and if the report state the existence, or apprehended existence of any danger, the owner, agent, or manager shall forthwith cause a true copy of the report to be sent to the inspector of the district.

XIV.—That the words "or have been" should be inserted between the words "who are" and the words "practical working miners."

Rule 39. No person not now employed as a coal or ironstone getter shall be allowed to work alone as a coal or ironstone getter in the face of the workings,

XV.—That the words "or persons" should be inserted after the words "no person."

Text of the Act.	Proposed Amendments.
[§ 641.] until he has had two years' experience of such work, under the supervision of skilled workmen, or unless he shall have been previously employed for two years in or about the face of the workings of a mine.	XVI.—That no man should be regarded as "experienced" unless he has obtained a certificate from a joint examining board of employers and employed. [§ 641.] XVII.—That managers should be required to demand from all applicants for employment certificates signed by their previous employer, showing the duration and conditions of their former occupation, and, conversely, that they should be required to give such certificates to all men leaving their service. XVIII.—That the qualifying period should be reduced from two years to eighteen months, and that the experience of six of the eighteen months should be specialised.
Section 65 of the Act of 1887.—No prosecution shall be instituted against the owner, agent, manager, or under-manager of a mine for any offence under this Act, not committed personally by such owner, agent, manager, or under-manager, which can be prosecuted before a court of summary jurisdiction, except by an inspector or with the consent in writing of a Secretary of State; and in the case of any offence of which the owner, agent, or manager, or under-manager of a mine is not guilty, if he proves that he had taken all reasonable means to prevent the commission thereof, an inspector shall not institute any prosecution against such owner, agent, manager, or under-manager, if satisfied that he had taken such reasonable means as aforesaid. No prosecution shall be instituted against a coroner for any offence under this Act, except with the consent in writing of a Secretary of State. *Section 75 of the Act of* 1887.—In this Act, unless the context otherwise requires, ... "Secretary of State" means one of Her Majesty's Principal Secretaries of State.	XIX.—That a manager or overman should be liable to prosecution without the consent of the inspector or of a Secretary of State being obtained, in respect of the acts done by the inexperienced men they may employ. XX.—That the administration of the Act should be entrusted to a special Minister of Mines. XXI.—That a clause should be inserted forbidding the double shift system. XXII.—That the number of men and sections that each foreman may superintend should be defined. XXIII.—That the foreman should be officially subordinated to the Government inspector of the district. XXIV.—That employers should be forbidden to sell coal at a lower price than would enable them to pay a certain fixed minimum wage. XXV.—That a maximum rate of profits should be fixed. XXVI.—That eight hours from bank to bank should be the maximum daily labour for all underground workers in mines. XXVII.—That eight hours of coal drawing per day should be the maximum.

THE CONSPIRACY AND PROTECTION OF PROPERTY ACT, 1875.

642. *Section 7 of the Act of* 1875.—Every person who, with a view to compel any other person to abstain from doing or to do any act which such other person has a legal right to do or abstain from doing, wrongfully and without legal authority—

I.—Uses violence to or *intimidates* such other person, or his wife or children, or injures his property; or

II.—*Persistently follows* such other person about from place to place; or

III.—Hides any tools, clothes, or other property owned or used by such other person or deprives him of or hinders him in the use thereof; or

IV.—Watches or *besets* the house or other place where such other person resides, or works, or carries on business or happens to be, or the approach to such house or place; or

V.—Follows such other person with two or more other persons in a disorderly manner in or through any street or road:

shall, on conviction thereof by a court of summary jurisdiction, or on indictment as herein-after mentioned, be liable either to pay a penalty not exceeding twenty pounds, or to be imprisoned for a term not exceeding three months with or without hard labour.

Attending at or near the house or place where a person resides or works or carries on business, or

I.—To define the terms "intimidates," "persistently follows," and "besets" in the text of the Act.

II.—That the said definition of "intimidation" should include such threats only as are accompanied by actual physical violence.

III.—That the said definition should include such acts only as are calculated to put a man in reasonable bodily fear, or as would justify a magistrate in binding over the offender to keep the peace.

IV.—That the said definition should cover the moral intimidation exercised by the assemblage of more than three men at a given spot for the purpose of picketing, the explanatory clause "attending at or near the house" &c. being repealed and the liberty of "giving information" being confined to the right of holding public meetings and canvassing the workmen's own homes.

V.—To make it illegal to strike against the employment of free labourers.

VI.—To disallow cumulative penalties under the Act.

642.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 642.]

happens to be or the approach to such house or place in order merely to obtain or communicate information shall not be deemed a watching or besetting within the meaning of this section.

VII.—To increase the penalties for offences under the Act.

VIII.—To deprive judges of the power of withholding the option of a fine, except for what a jury may consider to be an aggravated offence.

IX.—That the punishment for "intimidation" should be imprisonment without the option of a fine.

X.—To make the definition of intimidation cover the following acts on the part of employers:—blacklisting, eviction at less than three months' notice, dismissal without assignment of a valid reason, and engagement of men during a strike without informing them of its existence.

XI.—To make collection of subscriptions in the streets illegal.

XII.—To repeal the entire section.

THE CORONERS ACT, 1887.

643. *Section* 2.—This Act shall not apply to Scotland or Ireland.

Section 3.—(1.) Where a coroner is informed that the dead body of a person is lying within his jurisdiction, and there is reasonable cause to suspect that such person has died either a violent or unnatural death, or has died a sudden death of which the cause is unknown, or that such person has died in prison, or in such place or under such circumstances as to require an inquest in pursuance of any Act, the coroner, whether the cause of death arose within his jurisdiction or not, shall, as soon as practicable, issue his warrant for summoning not less than twelve nor more than twenty-three good and lawful men to appear before him at a specified time and place, there to inquire as jurors touching the death of such person as aforesaid.

I.—To extend the Act to Scotland.

II.—That coroners' juries should be composed o representatives of both employers and employed acquainted with the technicalities of the trade in connexion with which the fatal accident occurred.

III.—That the workmen should be represented on the jury, but that employers should be allowed to appear only through their solicitors.

IV.—To secure the attendance of trade union officials.

THE EMPLOYERS LIABILITY ACT, 1880.

644. *Section* 1.—Where, after the commencement of the Act, personal injury is caused to a workman—

I.—By reason of any defect in the condition of the ways, works, machinery, or plant connected with or used in the business of the employer; or

II.—By reason of the negligence of any person in the service of the employer who has the superintendence entrusted to him whilst in the exercise of such superintendence; or

III.—By reason of the negligence of any person in the service of the employer to whose orders or directions the workmen at the time of the injury was bound to conform, and did conform, where such injury resulted from his having so conformed; or

IV.—By reason of the Act or omission of any person in the service of the employer due or made in obedience to the rules or byelaws of the employer, or in obedience to particular instructions given by any person delegated with authority of the employer, in that behalf; or

V.—By reason of the negligence of any person in the service of the employer who has the charge or control of any signal, points, locomotive engine, or train upon a railway, the workman, or in case the injury results in death, the legal personal representatives of the workman, and any persons entitled in case of death, shall have the same right of compensation and remedies against the employer as if the workman had not been a workman of, nor in the service of the employer, nor engaged in his work.

Section 2.—A workman shall not be entitled under this Act to any right of compensation or remedy against the employer in any of the following cases; that is to say:—

I.—Under sub-section one of section one, unless the defect therein mentioned arose from, or had not been discovered or remedied owing to, the negligence of the employer, or of some person in the service of the employer, and entrusted by him with the duty of seeing that the ways, works, machinery, or plant were in proper condition.

II.—Under sub-section four of section one, unless the injury resulted from some impropriety or defect in the rules, byelaws or instructions therein mentioned; provided that where a rule or byelaw has been approved

I.—That employers should be responsible for such accidents only as result from orders given by themselves or their representatives or from defective gear.

II.—That the words "for the time being" should be inserted after the words "superintendence entrusted to him."

III.—To make the original employer liable, even when the work in which the accident occurred is sublet.

IV.—That employers should be responsible in all cases where contributory negligence is not proved.

V.—That contributory negligence should no longer be a bar to the men's claims under the Act.

VI.—That the doctrine of common employment should be abolished altogether.

VII.—That insurance against employers' liability should be prohibited.

VIII.—That insurance companies defending actions jointly with employers should be obliged to satisfy the verdict.

IX.—That "contracting out" of the Act should be prohibited.

X.—That employers should be criminally liable for accidents due to their own or their servants' negligence and be punishable by imprisonment instead of by a money penalty.

[§ 644.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 6

or has been accepted as a proper rule or byelaw by one of Her Majesty's Principal Secretaries of State, or by the Board of Trade or any other department of the Government under or by virtue of any Act of Parliament, it shall not be deemed for the purposes of this Act to be an improper or defective rule or byelaw.

III.—In any case, where the workman knew of the defect or negligence which caused his injury, and failed within a reasonable time to give or cause to be given, information thereof to the employer or some person superior to himself in the service of the employer, unless he was aware that the employer or such superior already knew of the said defect or negligence.

Section 3.—The amount of compensation recoverable under this Act shall not be found to be equivalent to the estimated earnings, during the three years preceding the injury, of a person in the same grade employed in the like employment and in the district in which the workman is employed at the time of the injury.

XI.—That the legal limit to the amount of compensation should be removed.

XII.—To forbid the employers from offering or the employed from accepting compensation before the case is taken into court.

Section 4.—An action for the recovery under this Act of compensation for an injury shall not be maintainable unless notice that injury has been sustained is given within six weeks, and the action is commenced within six months from the occurrence of the accident causing the injury, or, in case of death, within 12 months from the time of death; provided always, that in the case of death the want of such notice shall be no bar to the maintenance of such action if the judge should be of opinion that there was reasonable excuse for such notice.

XIII.—That the period of notice should be extended to three, six, or twelve months.

XIV.—That the period within which the action must be commenced should be extended.

Section 6.—1. Every action for recovery of compensation under this Act shall be brought in a county court, but may, upon the application of either plaintiff or defendant, be removed into a superior court in like manner and upon the same conditions as an action commenced in a county court may by law be removed.

XV.—That either party should be allowed to apply to a Government department to take up the case free of charge.

XVI.—That the right of appeal from a county court to a higher tribunal should be cancelled in the case of both plaintiff and defendant.

XVII.—That the said right of appeal should be cancelled except where a sum larger than 50*l.* is at stake.

XVIII.—That the said right should be cancelled except where a sum larger than 500*l.* is at stake.

XIX.—That the Act should apply to seamen.

Section 8.—For the purposes of this Act unless the context otherwise requires—

The expression "person who has superintendence entrusted to him" means a person whose sole or principal duty is that of superintendence, and who is not ordinarily engaged in manual labour.

The expression "employer" includes a body of persons corporate or incorporate.

The expression "workman" means a railway servant or a person to whom the Employers and Workmen Act, 1875, applies.

Section 13 *of the Act of* 1875.—Nothing in this Act shall take away or abridge any local or special jurisdiction touching apprentices.

This Act shall not apply to seamen or apprentices to the sea service.

XX.—That working men inspectors of dock machinery should be appointed with administrative powers under the Act.

XXI.—That regular and frequent inspection of all spars and planks used in the construction of staging in connexion with the shipbuilding and boilermaking industries should be provided for, and that provision should further be made for the examination of the ropes and chains upon which the staging is suspended.

XXII.—That local sanitary authorities should be given power to examine oil tank steamers, and that all users of boilers should be compelled to have them inspected by certificated boilermakers appointed for the purpose.

XXIII.—That all statutes relating to employers' liability should be repealed.

THE FACTORY AND WORKSHOP ACTS, 1878–1891.

Sanitation.

645. *Section* 3 *of the Act of* 1878.—A factory shall be kept in a cleanly state and free from effluvia arising from any drain, watercloset, earth-closet, privy, urinal, or other nuisance. A factory shall not be over-crowded while work is carried on therein as to be dangerous or injurious to the health of the persons employed therein, and shall be ventilated in such a manner as to render harmless so far as is practicable, all the gases, vapour, dust, or other impurities generated in the course of the manufacturing process or handicraft carried on therein that may be injurious to health.

A factory in which there is a contravention of this section shall be deemed not to be kept in conformity with this Act.

Sanitation.

I.—To define in more precise terms the obligation of employers to provide for decency and comfort.

II.—To give factory inspectors the same power in regard to the sanitary condition of workshops as they possess in regard to that of factories, and to put an end to the dual control of factory and sanitary inspectors.

III.—To empower trade union officials as well as factory inspectors to prosecute employers for breach of the sanitary regulations.

[§ 645.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 645.]

Section 3 of the Act of 1891.—(1.) Section three and thirty-three of the Factory and Workshop Act, 1878 (which relates to cleanliness, ventilation, and overcrowding in and limewashing of factories and workshops), shall cease to apply to workshops.

(2.) For the purpose of their duties with respect to workshops (not being workshops to which the Public Health (London) Act, 1891, applies), a sanitary authority and their officers shall, without prejudice to their other powers, have all such powers of entry, inspection, taking legal proceeding or otherwise, as an inspector under the principal Acts.

Safety and Accidents.

Section 5 of the Act of 1875.—With respect to the fencing of machinery in a factory the following provisions shall have effect:—

(1.) Every hoist or teagle, and every fly-wheel directly connected with the steam or water or other mechanical power, whether in the engine-house or not, and every part of a steam engine and water wheel shall be securely fenced; and

(2.) Every wheel-race not otherwise secured shall be securely fenced close to the edge of the wheel-race; and

(3.) All dangerous parts of the machinery and every part of the mill-gearing shall either be securely fenced or be in such position or of such construction as to be equally safe to every person employed in the factory, as it would be if it were securely fenced; and

(4.) All fencing shall be constantly maintained in an efficient state while the parts required to be fenced are in motion or use for the purpose of any manufacturing process.

Section 9 of the Act of 1878.—A child shall not be allowed to clean any part of the machinery in a factory while the same is in motion by the aid of steam, water, or other mechanical power.

Safety and Accidents.

I.—To enforce the use of shuttle-guards in textile factories.

II.—To empower inspectors to order all dangerous machinery to be fenced, not merely the mill-gearing.

III.—To specify the hours during which machinery should be stopped and cleaned.

IV.—To re-enact section 3 of the Act of 1878, repealed in 1891, relating to the use of faulty grindstones, but omitting the seven days' notice proviso.

V.—To give inspectors power to deal with the faulty construction of workshops.

VI.—To extend the jurisdiction of factory inspectors to all spars and planks used in the construction of staging, and to all ropes and chains upon which staging is suspended.

VII.—To give local sanitary authorities power to examine oil tank steamers, and to compel all users of boilers to have them inspected by certificated boiler-makers appointed for the purpose.

Coroners' Inquests.

Section 22 of the Act of 1891.—(3.) Where a death has occurred in any factory or workshop, the coroner shall forthwith advise the district inspector under this Act of the time and place of the holding of the inquest, and at such inquest any relative of any person whose death may have been caused by the accident with respect to which the inquest is being held, and any inspector under the principal Act, and the occupier of the factory or workshop in which the accident occurred, and any person appointed by the order in writing of the majority of the workpeople employed in the same factory or workshop shall be at liberty to attend and examine any witness either in person, or by his counsel, solicitor, or agent, subject to the order of the coroner.

Section 33 of the Act of 1891.—(5.) Where a death has occurred by accident in any factory or workshop, a public inquiry in open court shall be held by the sheriff, upon the petition of any party interested, and the sheriff shall forthwith advise the district inspector under the Act of the time and place of holding of the inquiry, and at such inquiry any relative of any person whose death has been caused by the accident with respect to which the inquiry is being held and the occupier or manager of the factory or workshop in which the accident occurred, and any person appointed by the order in writing of the majority of workpeople employed in the said factory or workshop shall be at liberty to attend and examine any witness either in person or by his counsel, solicitor, or agent, subject nevertheless to the order of the sheriff.

Coroners' Inquests.

I.—To give union officials independent legal standing at inquests.

II.—To give the relatives of the deceased, in addition to the right of attending inquests and examining witnesses, either personally or by counsel, the further right, at present conferred only upon a majority of the fellow workmen, of appointing union officials, instead of solicitors, to represent them.

III.—To confine the composition of coroners' juries to persons connected with the trade in which the fatal accident occurred.

IV.—To render unnecessary the fifth sub-section of section 33 of the Act of 1891 by a complete assimilation of Scotch to English law on the subject of inquests into the causes of fatal accidents.

Tickets containing Particulars.

Section 24 of the Act of 1891.—Every person who is engaged as a weaver in the cotton, worsted, or woollen, or linen or jute trade, or as a winder, weaver, or reeler, in the cotton trade, and is paid by the piece, in or in connexion with any factory or workshop, shall have supplied to him with his work, sufficient particulars to enable him to ascertain the rates of wages at which he is entitled to be paid for the work, and the occupier of the factory or workshop shall supply him with such particulars accordingly

Tickets containing Particulars

I.—To enforce the issue to weavers of cards containing full particulars as to their rate of payment.

II.—To make section 24 of the Act of 1891 more elastic.

[§ 645.]

Text of the Act.

Domestic Workshops.

Section 37 *of the Act of* 1891.—(2.) In this Act the expression "domestic workshop" means a workshop to which section 16 of the principal Act applies.

Section 16 *of the Act of* 1878.—Where persons are employed at home, that is to say, in a private house, room, or place, which, though used as a dwelling, is by occasion of the work carried on there, a factory or workshop within the meaning of this Act and in which neither steam, water, nor other mechanical power is used in aid of the manufacturing process carried on there, and in which the only persons employed are members of the same factory dwelling there, the foregoing regulations of this Act with respect to the employment of children, young persons, and women, shall not apply to such factory or workshop, and in lieu thereof the following regulations shall be observed therein :—

Cotton Cloth Factories.

Section 8 *of the Act of* 1887.—The occupier of any cotton cloth factory in which humidity of the atmosphere is artificially produced shall give notice thereof in writing to the Chief Inspector of Factories.

Lead Factories.

Section 2 *of the Act of* 1883.—After the thirty-first day of December one thousand eight hundred and eighty-three, it shall not be lawful to carry on a white lead factory unless such factory is certified by an inspector to be in conformity with this Act.

Bakeries.

Section 15 *of the Act of* 1883.—It shall not be lawful to let or suffer to be occupied as a bakehouse, or to occupy as a bakehouse any room or place which was not so let or occupied before the first day of June one thousand eight hundred and eighty-three, unless the following regulations are complied with :—

(I.) No watercloset, earth-closet, privy, or ashpit shall be within or communicate directly with the bakehouse ;

(II.) Any cistern for supplying water to the bakehouse shall be separate and distinct from any cistern for supplying water to a watercloset ;

(III.) No drain or pipe for carrying off fæcal or sewage matter shall have an opening within the bakehouse.

Any person who lets, or suffers to be occupied, or who occupies any room or place as a bakehouse in contravention of this section, shall be liable, on summary conviction, to a fine not exceeding five shillings for every day during which any room or place is so occupied after a conviction under this section.

Overtime.

Section 54 *of the Act of* 1878.—If in any factory or workshop, or part thereof, to which this exception applies, the process in which a child, young person, or woman is employed is in an incomplete state at the end of the period of employment of such child, young person, or woman, the provisions of this Act with respect to the period of employment shall not prevent such child, young person, or woman from being employed for a further period not exceeding thirty minutes.

Medical Certificates of Fitness.

Section 27 *of the Act of* 1878.—In a factory a child or a young person under the age of sixteen years shall not be employed for more than seven, or, if the certifying surgeon for the district resides more than three miles from the factory, thirteen work days, unless the occupier of the factory has obtained a certificate in the prescribed form of the fitness of such child or young person for employment in that factory.

A certificate of fitness for employment for the purposes of this Act shall be granted by the certifying surgeon for the district.

Section 72 *of the Act of* 1878.—Subject to such regulations as may from time to time be made by a Secretary of State, an inspector may from time to time appoint a

Proposed Amendments.

[§ 64

Domestic Workshops.

I.—To compel employers to find accommodation for all their workpeople.

II.—To make owners of houses used for industrial purposes responsible for the observance of the Factory Acts on the part of their tenants.

III.—To make every giver-out of work responsible for the observance of the Factory Acts in whatever place he allows the work to be done.

IV.—To bring every place where more than one person works, even if no wages pass between them, under the definition of a workshop proper.

Cotton Cloth Factories.

I.—To make the law relating to steaming more elastic.

II.—To allow a similar latitude for steaming days as for overtime.

Lead Factories.

I.—To bring red lead factories under the same Act as white lead factories.

Bakeries.

I.—To prohibit underground bakeries.

II.—To cause all bakeries to be registered.

III.—To cause all bakeries to be built inside of white glazed brick.

Overtime.

I.—To abolish overtime in all cases.

II.—To allow employers, with the inspector's permission, to work overtime when pressed for delivery of goods.

Medical Certificates of Fitness.

I.—To introduce periodical medical examination of the children employed in the mills.

II.—That one registration and one certificate should hold good permanently.

III.—That medical certificates should be required in workshops as well as in factories.

IV.—To make the certifying surgeons independent of the millowners, like the factory inspectors.

V.—To appoint a medical inspector to judge whether women are capable of doing the tasks allotted to them without physical injury.

345.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 345.]

sufficient number of duly registered medical practitioners to be certifying surgeons for the purposes of this Act, and may from to time revoke any such appointment. A surgeon who is the occupier of a factory or workshop, or is directly or indirectly interested therein, or in any process or business carried on therein, or in a patent connected therewith, shall not be a certifying surgeon for that factory or workshop.

Employment of Women.

Section 17 *of the Act of* 1891.—An occupier of a factory or workshop shall not knowingly allow a woman to be employed therein within four weeks after she has given birth to a child.

Employment of Women.

I.—To extend the period during which mothers after confinement are excluded from factories from four weeks to six months.

II.—To prohibit the employment of women for a stated period before as well as after confinement.

III.—To prohibit female nailmakers from pointing nails larger than half an inch.

IV.—To prohibit the employment of women as barmaids.

V.—To compel employers to provide separate rooms for male and female workers in the tailoring trade.

Employment of "Young Persons."

Section 96 *of the Act of* 1878.—The expression of "young person" means a person of the age of fourteen years and under the age of eighteen years.

Employment of "Young Persons."

I.—To raise the age at which "young persons" may begin to be employed from 18 to 21.

Employment of Children under Thirteen.

Section 18 *of the Act of* 1891.—On and after the first day of January one thousand eight hundred and ninety-three no child under the age of eleven years shall be employed in a factory or workshop.

Section 23 *of the Act of* 1878.—The parent of a child employed in a factory or in a workshop shall cause that child to attend some recognised efficient school (which school may be selected by such parent) as follows:—

(1.) The child when employed in a morning or afternoon set shall in every week, during any part of which he is so employed, be caused to attend on each work day for at least one attendance; and

(2.) The child when employed on the alternate day system shall on each work day preceding each day of employment in the factory or workshop be caused to attend for at least two attendances;

(3.) An attendence for the purpose of this section shall be an attendance as defined, for the time being, by the Secretary of State, with the consent of the Education Department, and be between the hours of eight in the morning and six in the evening.

Employment of Children under Thirteen.

I.—To raise the age of half-timers to 12.

II.—To raise the age of half-timers to 13 and so to abolish the half-time system.

III.—To fix an educational standard instead of a certain age as the qualification for half-time work.

IV.—To let such a standard be the 4th.

V.—To let age and attendance be the sole qualification for half-time work, and to let such attendances be the aggregate for a school career instead of so many per annum.

VI.—To make the methods by which half-timers attend school more uniform.

VII.—To provide separate schools for half-timers.

VIII.—To prohibit the employment of children under 13 before 8.0 a.m. between 1st October and 31st March.

IX.—To prohibit all child labour under 14.

X.—To allow children to enter the mills at 10 years of age.

Employment of Children over Thirteen.

Section 96 *of the Act of* 1878.—In this Act, unless the context otherwise requires, the expression "child" means a person under the age of fourteen years.

Section 26 *of the Act of* 1878.—When a child of the age of thirteen years has obtained from a person authorised by the Education Department a certificate of having attained such standard of proficiency in reading, writing, and arithmetic, or such standard of previous due attendance at a certified efficient school, as herein-after mentioned, that child shall be deemed to be a young person for the purposes of this Act.

Employment of Children over Thirteen.

I.—To raise the age of full timers.

II.—To fix an educational standard instead of an age for full timers.

III.—To let the said standard be the 6th.

IV.—To let age and attendances be the sole qualification for full timers, and to let the attendances be the aggregate for the school career, instead of so many per annum.

Extension of the Acts.

Section 93 *of the Act of* 1878.—The expression "workshop" in the Act means—

(1.) Any premises or places named in Part Two of the Fourth Schedule to this Act, which are not a factory within the meaning of this Act;

(2.) Also any premises, room, or place, not being a factory within the meaning of this Act, in which premises, room, or place, or within the close curtilage or precincts of which premises any manual labour is exercised by way of trade or for the purpose of gain, in or incidental to the following purposes or any of them; that is to say—

(*a.*) In or incidental to the making of any article or of part of any article; or

(*b.*) In or incidental to the altering, repairing, ornamenting, or finishing of any article; or

Extension of the Acts.

I.—To extend the legal definition of "workshop" to all places where anybody works at manufacture in company with anybody other than his wife.

II.—To extend the legal definition of "workshop" to warehouses.

III.—To extend the Factory Acts to outdoor work in shipyards.

[§ 645.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 64

(c.) In or incidental to the adapting for sale of any article;

and to which or over which premises, room, or place the employer of the persons working therein has the right of access or control.

A part of a factory or workshop may for the purposes of this Act be taken to be a separate factory or workshop; and a room solely used for the purpose of sleeping therein shall not be deemed to form part of the factory or workshop for the purposes of this Act.

Where a place situate within the close curtilage or precincts forming a factory or workshop is solely used for some purpose other than the manufacturing process or handicraft carried on in the factory or workshop, such place shall not be deemed to form part of that factory or workshop for the purposes of this Act, but shall, if otherwise it would be a factory or workshop, be deemed to be a separate factory or workshop, and be regulated accordingly. Any premises or place shall not be excluded from the definition of a factory or workshop by reason only that such premises or place are or is in the open air.

. . This Act shall not apply to such workshops, other than bakehouses, as are conducted on the system of not employing any child, young person, or woman therein, but same as aforesaid applies to all factories and workshops as before defined, inclusive of factories and workshops belonging to the Crown; provided that in case of any public emergency, a Secretary of State may exempt a factory or workshop belonging to the Crown from this Act to the extent and during the period named by him.

Penalties.

Section 87 of the Act of 1878.—Where the occupier of a factory or workshop is charged with an offence against this Act he shall be entitled, upon information duly laid by him to have any other person whom he charges as the actual offender, brought before the court at the time appointed for hearing the charges; and if, after the commission of the offence has been proved, the occupier of the factory or workshop proves to the satisfaction of the court that he has used due diligence to enforce the execution of the Act, and that the said other person had committed the offence in question without his knowledge, consent, or connivance, the said other person shall be summarily convicted of such offence, and the occupier shall be exempt from any fine.

Penalties.

I.—To impose penalties under the Factory Acts upon the actual wrongdoer and not the innocent employer.

Administration.

Section 67 of the Act of 1878.—A Secretary of State from time to time, with the approval of the Treasury as to numbers and salaries, may appoint such inspectors (under whatever title he may from time to time fix), and such clerks and servants as he may think necessary for the execution of this Act, and may assign to them their duties, and award them their salary, and may constitute a principal inspector with an office in London, and may regulate the cases and manner in which the inspectors, or any of them, are to execute and perform the powers and duties of inspectors under this Act, and may remove such inspectors, clerks, and servants.

Administration.

I.—That, in small Irish provincial towns, the administration of the Acts should be vested in the police.

II.—That Factory Inspectors should be placed under the control of local committees.

III.—That the administration of the Acts should be transferred from the Home Office to the new Labour Department.

IV.—That the administration of the Factory Acts should be transferred to a new Ministry of Mines and Manufactures.

V.—That employers under the Factory Acts should be obliged to furnish balance sheets to the Board of Trade to be used as indicating what wages they could afford to pay.

VI.—That all the provisions of the Acts should be made more elastic.

THE FRIENDLY SOCIETIES ACTS, 1875–1893.

646. *Section 8 of the Act of* 1875.—The following societies shall be registered under this Act, viz.:—

(1.) Societies (herein called friendly societies) established to provide by voluntary subscriptions of the members thereof, with or without the aid of donations—

For the relief or maintenance of the members, their husbands, wives, children, fathers, mothers, brothers or sisters, nephews or nieces, or wards being orphans, during sickness or other infirmity, whether bodily or mental, in old age (which shall mean any age after 50), or in widowhood, or for the

I.—To deal with "collecting" friendly societies under a special Act.

II.—To deprive working men's clubs "for purposes "of social intercourse, mutual helpfulness, mental "and moral improvement, and rational recreation" of their eligibility for registration without being specially authorised.

III.—To make societies formed for the purpose of granting relief to members out of employment eligible for registration without being specially authorised.

relief or maintenance of the orphan children of members during minority;

For insuring money to be paid on the birth of a member's child, or on the death of a member, or for the funeral expenses of the husband, wife, or child of a member, or of the widow of a deceased member, or, as respects persons of the Jewish persuasion, for the payment of a sum of money during the period of confined mourning;

For the relief or maintenance of the members when on travel in search of employment, or when in distressed circumstances, or in case of shipwreck, or loss or damage of or to boats or nets;

For the endowment of members or nominees of members at any age;

For the insurance against fire to any amount not exceeding fifteen pounds of the tools or implements of the trade or calling of the members:

Provided that no society (except as aforesaid) which contracts with any person for the assurance of an annuity exceeding fifty pounds per annum, or of a gross sum exceeding two hundred pounds, shall be registered under this Act:

(2.) Societies (herein called cattle insurance societies) for the insurance to any amount against loss by death of neat cattle, sheep, lambs, and horses from disease or otherwise;

(3.) Societies for any benevolent or charitable purpose (herein called benevolent societies);

(4.) Societies (herein called working men's clubs) for purposes of social intercourse, mutual helpfulness, mental and moral improvement, and rational recreation;

(5.) Societies for any purpose which the Treasury may authorise as a purpose to which the powers and facilities of this Act ought to be extended (herein called "specially authorised societies").

Section 13 *of the Act of* 1875.—With respect to the rules of societies the following provisions shall have effect:—

IV.—To simplify the statutory formalities as to printing rules.

(1.) The rules of every society sent for registry shall, according to the class in which the society is to be registered, contain provisions in respect of the several matters mentioned in the Second Schedule to this Act.

(2.) No amendment of a rule made by a registered society shall be valid until the same has been registered under this Act, for which purpose copies of the same, signed by three members and the secretary, shall be sent to the registrar.

(3.) The provision herein contained as to appeals from a refusal of registry shall apply to amendments of rules.

(4.) The registrar shall, on being satisfied that any amendment of a rule is not contrary to the provision of this Act, issue to the society an acknowledgment of registry of the same, which shall be conclusive evidence that the same is duly registered.

(5.) A copy of the rules of a registered society shall be delivered by the society to every person on demand, on payment of a sum not exceeding one shilling.

(6.) If any person, with intent to mislead or defraud, gives to any other person a copy of any rules, laws, regulations, or other documents other than the rules for the time being registered under this Act, on the pretence that the same are existing rules of a registered society, or that there are no other rules of such society, or gives to any person a copy of any rules on the pretence that such rules are the rules of a registered society when the society is not registered, the person so offending shall be deemed guilty of a misdemeanor.

Section 14 *of the Act of* 1875.—With respect to the duties and obligations of registered societies the following provisions shall have effect:—

V.—To simplify the statutory formalities as to making returns.

(1.) Every registered society shall—

(*a.*) Have a registered office to which all communications and notices may be addressed, and send to the registrar notice of the situation of such office, and of every change therein:

(*b.*) From time to time at some meeting of the society, and by a resolution of a majority of the members present and entitled to vote thereat, appoint one or more trustees of the society, and send to the registrar a copy of every resolution appointing a trustee, signed by the trustee so appointed, and by the secretary of the society:

(*c.*) Once at least in every year submit its accounts for audit either to one of the public auditors appointed as herein mentioned, or to two or more

[§ 646.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 64

persons appointed as the rules of the society provide, which auditors shall have access to all books and accounts of the society, and shall examine the general statement of the receipts and expenditure, funds, and effects of the society, and verify the same with the accounts and vouchers relating thereto, and shall either sign the same as found by them to be correct, duly vouched and in accordance with law, or specially report to the society in what respects they find it incorrect, unvouched, or not in accordance with law:

(*d.*) Once in every year before the first day of June send to the registrar a general statement (to be called the annual return) of the receipts and expenditure, funds, and effects of the society as audited, which shall show separately the expenditure in respect of the several objects of the society, and shall be made out to the thirty-first December then last inclusively, and a copy of the auditor's report, if any, shall also be sent to the registrar with such general statement; and such annual return shall state whether the audit has been conducted by a public auditor appointed as in this Act provided, and by whom; and, if by any person or persons other than a public auditor, shall state name, address, and calling or profession of each of such persons, and the manner in which and the authority under which they were respectively appointed:

. . . . . .

(*f.*) Once at least in every five years either cause its assets and liabilities to be valued by a valuer to be appointed by the registrar shall be sent through an officer appointed in that behalf by the society of which the branch forms part.

(2.) No society shall pay any sum of money upon the death of a member or other person whose death is or ought to be entered in any register of deaths, except upon the production of a certificate of such death, under the hand of the registrar of deaths, or other person having the care of the register of deaths, in which such death is or ought to be entered.

This sub-section shall not apply to deaths at sea.

(3.) It shall be an offence under this Act if any registered society or any officer or member thereof—

(*a.*) Fails to give any notice, send any return or document, or do or allow to be done any act or thing which the society, officer, or person is by this Act required to give, send, do, or allow to be done:

(*b.*) Wilfully neglects or refuses to do any act or to furnish any information required for the purposes of this Act by the chief or any other registrar or other person authorised under this Act, or does any act or thing forbidden by this Act:

(*c.*) Makes a return or wilfully furnishes information in any respect false or insufficient.

(4.) Every offence by a society under this Act shall be deemed to have been also committed by every officer of the same, bound by the rules thereof to fulfil any duty whereof such offence is a breach, or if there be no such officer, then by every member of the committee of management of the same, unless such member be proved to have been ignorant of such offence; and every default under this Act constituting an offence, if continued, constitutes a new offence in every week during which the same continues.

(5.) Every annual or other return, abstract of valuation, and other document required for the purposes of this Act shall be made in such form and shall contain such particulars as the chief registrar prescribes.

(6.) All documents by this section required to be sent to the registrar shall be deposited with the rules of the societies to which the same respectively relate, and shall be registered or recorded by the registrar, with such observations thereon, if any, as the chief registrar shall direct:

Provided that the chief registrar, with the approval of the Treasury, may dispense with the valuation herein required in respect of societies to whose purposes or to the nature of whose operations, he may deem the same inapplicable; and the provisions herein contained in respect of the valuation shall not apply to benevolent societies, working men's clubs, or cattle insurance societies, nor to specially authorised societies, unless it be so directed in the authority for registering the same.

VI.—To prohibit friendly societies from taking contributions in consideration of sick pay for life, without getting an actuarial certificate.

VII.—To include building societies under the Friendly Societies Act.

THE HOSIERY MANUFACTURE (WAGES) ACT, 1874.

Text of the Act.	Proposed Amendments.
647. *Section* 2.—All contracts to stop wages, and all contracts for frame rents and charges, between employers and artificers, shall be and are hereby declared to be illegal, null, and void.	I.—To make deductions for expenses in lieu of frame rent illegal.

THE INDUSTRIAL AND PROVIDENT SOCIETIES ACT, 1876.

648. *Section* 9.—With respect to the rules of societies, the following provisions shall have effect:—	I.—To remove the limit of share capital per member.
(1.) The rules of every society sent for registry shall contain provisions in respect of the several matters mentioned in the Second Schedule to this Act.	
Schedule II.—Matters to be provided for by the rules of societies registered under this Act.	
(5.) Determination of the amount of interest, *not exceeding two hundred pounds sterling*, in the shares of the society, which any member other than a registered society may hold.	
(8.) Provision for the audit of accounts.	II.—To compel the submission of accounts to a public auditor.
Section 21.—The treasurer may from time to time appoint public auditors for the purposes of this Act, and may determine from time to time the rates of remuneration to be paid by societies for the services of such auditors, but the employment of auditors is not compulsory on any society.	
Section II.—Registered societies shall be entitled to the following privileges:—	III.—To make co-operative societies pay income tax without rebate to members.
(4.) The society shall not be chargeable under Schedule D. of the Income Tax Acts, but no member of or person employed by the same to whom any profits are paid shall be exempted from any assessment to the said duties to which he would otherwise be liable.	

THE MERCHANDISE MARKS ACT, 1887.

649. *Section* 2.—(1.) Every person who (*a*) forges any trade mark; or (*b*) falsely applies to goods any trade mark or any mark so nearly resembling a trade mark as to be calculated to deceive; or (*c*) makes any die, block, machine, or other instrument for the purpose of forging, or of being used for forging, a trade mark; or (*d*) applies any false description of goods; or (*e*) disposes of or has in his possession any die, block, machine, or other instrument for the purpose of forging a trade mark; or (*f*) causes any of the things above in this section mentioned to be done, shall, subject to the provisions of this Act, and unless he proves that he acted without intent to defraud, be guilty of an offence against this Act.	I.—To compel the words "machine made, dressed" to be put on all work made by machinery and dressed by hand. II.—To prohibit the words "warranted Sheffield" being put upon bad cutlery. III.—To cause all goods to be plainly marked with the manufacturer's name. IV.—To oblige machine-made goods that compete with hand-made goods to be marked as such. V.—To apply the law against false marking to false labelling also. VI.—To cause hand-made hosiery to be stamped as such.

THE MERCHANT SHIPPING ACTS, 1854–90.

Local Marine Boards.	*Local Marine Boards.*
650. *Section* 110 *of Act of* 1854.—There shall be local marine boards for carrying into effect the provisions of this Act, . . . and each of such local marine boards shall be constituted as follows; (that is to say) the mayor or provost and the stipendiary magistrate . . . shall be members ex officio; the Board of Trade shall appoint four members from persons residing or having places of business at the port or within seven miles thereof; and the owners of foreign-going ships and of home trade passenger ships registered at the port shall elect six members, &c.	I.—That the nominees of the Board of Trade should be persons not interested in shipping either directly or indirectly. II.—That six additional members should be elected by the properly qualified A.B.'s belonging to the Seamen's Union at each port.
Section 241 *of Act of* 1854.—If . . . . any local marine board has reason to believe that any master or mate is, from incompetency or misconduct, unfit to discharge his duties, . . . such persons as . . . the local marine board may appoint for the purpose shall, with the assistance of a local stipendiary magistrate, conduct the investigation, and may summon the master or mate to appear.	III.—That seamen should be enabled to secure the transfer of such cases as concern their interests from the jurisdiction of the local marine boards to that of the nearest magistrate that is not a shipowner.
Engagement of Seamen.	*Engagement of Seamen.*
Section 147 *of Act of* 1854.—The following offences shall be punishable as herein-after mentioned; (that is to say), If any person not licensed as aforesaid, other than the owner or master or a mate of the ship, or some person who is bonâ fide the servant and in the constant employ of the owner, or a shipping master duly appointed	I.—That the word "agent" should be inserted in place of the word "servant." II.—That the words "and in the constant employ" should be omitted.

[§ 650.] TEXT OF THE ACTS. PROPOSED AMENDMENTS. [§ 65

as aforesaid, engages or supplies any seaman or apprentice to be entered on board any ship in the United Kingdom, he shall for each seaman or apprentice so engaged or supplied incur a penalty not exceeding twenty pounds. . . . .

Section 149 *of Act of* 1854.—The master of every ship shall enter into an agreement with every seaman whom he carries to sea from any port in the United Kingdom as one of his crew in the manner herein-after mentioned; and every such agreement shall be in a form sanctioned by the Board of Trade, and shall be dated at the time of the first signature thereof, and shall be signed by the master before any seaman signs the same, and shall contain the following particulars as terms thereof. . . . .

III.—That seamen should be forbidden under penalty to sign on for one ship before they are clear of their engagements for another.

IV.—That shipowners should have perfect liberty of contract as to the terms of their engagements with their men.

Section 150 *of Act of* 1854.—In the case of all foreign-going ships, in whatever part of Her Majesty's dominions the same are registered, the following rules shall be observed with respect to agreements; (that is to say),

I. Every agreement made in the United Kingdom . . . shall be signed by each seaman in the presence of a shipping master.

V.—That shipowners should have perfect liberty to sign these agreements when and where they please, and without the presence of an officer of the Mercantile Marine.

Allotment of Wages.

Section 149 *of Act of* 1854.—And every such agreement shall be so framed as to admit of stipulations to be adopted at the will of the master and seaman, in each case, as to advance and allotment of wages. . . .

Allotment of Wages.

I.—That allotment notes should be abolished, and that the full wages should be paid weekly to the seaman's family direct.

II.—That the forms of allotment notes should be sold only by authority of the Board of Trade.

III.—That cashiers of advance notes should be empowered to garnishee the future earnings on proving their claim before a magistrate or the Board of Trade.

Section 169 *of Act of* 1854.—The wife, or the father or mother, or the grandfather or grandmother, or any child or grandchild, or any brother or sister of any seaman in whose favour an allotment note of part of the wages of such seaman is made may . . . . sue for and receive the sums allotted by the note, and, as the same are made payable, with costs from the owner or any agent who has authorised the drawing of the note. . . . .

Section 3 *of the Act of* 1880.—I. Every agreement with a seaman . . . . . shall, if the seaman so require, stipulate for the allotment of any part not exceeding one half of the wages of the seaman in favour of one or more of the persons mentioned in section one hundred and sixty-nine of the Merchant Shipping Act, 1854, as amended by this section.

IV.—That the power of allotment should be extended from one half to two thirds of a seaman's wages.

II. The allotment may also be made in favour of a savings bank (vide infra, sub-section V.), and, in that case, shall be in favour of such persons and carried into effect in such manner as may be for the time being directed by regulations of the Board of Trade, and section one hundred and sixty-nine of the Merchant Shipping Act, 1854, shall be construed as if the said persons were named therein.

V.—That allotment notes should be made payable also to any registered trades union or friendly society.

III. . . . . .

IV. A payment under an allotment note shall begin at the expiration of one month, or if the allotment is in favour of a savings bank, of three months from the date of the agreement . . . . and shall be paid at the expiration of every subsequent month.

VI.—That payments under an allotment note should begin at the end of a week.

VII.—That the said payments should be made weekly.

V. For the purposes of this section, "savings' bank" means a savings bank established under one of the Acts mentioned in the First Schedule to this Act.

VIII.—That allotment notes should be made payable to any savings bank.

Provisions.

Provisions.

Section 149 *of Act of* 1854.—The master of every ship . . . . shall enter into an agreement with every seaman whom he carries to sea from any port in the United Kingham as one of his crew, in the manner herein-after mentioned; and every such agreement shall be in a form sanctioned by the Board of Trade . . . . ., and shall contain the following particulars as terms thereof; (that is to say), ...

I.—That the items of the authorised scale of provisions should be expressly stated in the text of the Act.

(6.) A scale of the provisions which are to be furnished to each seaman.

(7.) Any regulations as to . . . . short allowance of provisions or other lawful punishments for misconduct, which have been sanctioned by the Board of Trade, as regulations proper to be adopted, and which the parties agree to adopt.

II.—That a captain should no longer have the power of inflicting punishment by reducing the allowance of provisions.

Section 225 *of Act of* 1854.—Every master shall keep on board proper weights and measures for the purpose of determining the quantities of the several provisions

III.—That the law should further provide for the said weights and measures being kept in proper order.

[§ 650.]

TEXT OF THE ACT.

and articles served out, and shall allow the same to be used at the time of serving out such provisions and articles, in the presence of a witness, whenever any dispute arises about such quantities, and, in default, shall for every offence incur a penalty not exceeding ten pounds.

Section 31 *of Passengers Act,* 1855.—Before any "passenger ship" shall be cleared out, the emigration officers at the port of clearance shall survey or cause to be surveyed by some competent person the provisions and water by this Act required to be placed on board for the consumption of the passengers, and shall satisfy himself that the same are of a good and wholesome quality, and in a sweet and good condition, and are in quantities sufficient to secure throughout the voyage the issues herein-after prescribed: In addition to the allowance of pure water for the use of each passenger there shall be shipped for cooking purposes an additional supply of pure water, after the rate of at least ten gallons for every day of the prescribed length of voyage for every one hundred statute adults on board; and also for the use of the crew and all other persons on board an ample supply of wholesome provisions and pure water, which shall not be inferior in quality to the supply of the same articles provided for the consumption of the passengers. . . . .

Cases of Illness.

Section 210 *of Act of* 1854.—Every such payment as aforesaid, whether by bill or in money, shall, if made in any British possession, be made to the seaman or apprentice himself, and, if made out of Her Majesty's dominions, to the consular officer, who shall, if satisfied with the account, endorse on one of the duplicates thereof a receipt for the amount paid or bill delivered, and shall return the same to the master; and the master shall, within 48 hours after his return to his post of destination in the United Kingdom, deliver the same to the shipping master there; and the consular officer shall retain the other duplicate of the said account, and shall, if the seaman or apprentice subsequently obtains employment at or otherwise quits the port, deduct out of the sum received by him as aforesaid any expenses which have been incurred by him in respect of the subsistence of the seaman or apprentice under the provisions herein contained, except such as the master or owner of the ship is hereby required to pay, and shall pay the remainder to the seaman or apprentice, and shall also deliver to him an account of the sums so received and expended on his behalf; and shall, if the seaman or apprentice dies before his ship quits the port, deal with the same in the manner herein-after specified in that behalf, and shall, if the seaman or apprentice is sent home at the public expense under the provisions herein contained, account for the amount received to the Board of Trade; and such amount shall, after deducting any expenses which have been duly incurred in respect of such seaman or apprentice, except such as the master or owner of the ship is hereby required to pay, be dealt with as wages to which he is entitled, and shall be paid accordingly.

Accommodation on Board Ship.

Section of Act of 1867.—The following rules shall be observed with respect to accommodation on board British ships (that is to say):—

I. Every place in any ship, occupied by seamen and appropriated to their use, shall have for every such seaman or apprentice a space of not less than seventy-two cubic feet measured on the deck or floor of such place.

Unseaworthiness of Ships, Undermanning, &c.

Section 5 *of October* 1876.—In every contract of service, express or implied, between the owner of a ship and the master or any seaman thereof, and in every instrument of apprenticeship whereby any person is bound to serve as an apprentice on board any ship, there shall be implied, notwithstanding any agreement to the contrary, an obligation on the owner of the ship, that the owner of the ship and the master, and every agent charged with the loading thereof for sea, or the sending thereof to sea, shall use all reasonable means to insure the seaworthiness of the ship for the voyage at the time when the voyage commences, and to keep her in a seaworthy condition for the voyage during the same: Provided that nothing in this section shall subject the owner of a ship to any liability by reason of the ship being sent to sea in an unseaworthy state, where,

PROPOSED AMENDMENTS.

[§ 650.]

IV.—That section 31 of the Act of 1855 should be extended to ships that do not carry passengers.

Cases of Illness.

I.—That the expenses of sending home seamen invalided abroad should be paid by the shipowners, without deduction from the wages.

II.—That the wages of seamen invalided abroad should recommence at the moment they leave the hospital and embark upon their homeward voyage, and should continue until the moment of their arrival in the United Kingdom.

III.—That the seamen's hospital and medical expenses incurred abroad should be paid by the shipowners without deduction from the wages.

Accommodation on Board Ship.

I.—That the minimum accommodation per man should be extended from 72 to 120 cubic feet.

II.—That an open space of not less than 250 cubic feet should be set apart in the forecastle for the men to dry their clothes in.

Unseaworthiness of Ships, Undermanning, &c

I.—That no shipowner should be deemed to have "used all reasonable means" to make his vessel seaworthy unless it is manned according to a definite scale in proportion to its registered tonnage.

[§ 650.] TEXT OF THE ACT.

owing to special circumstances, the so sending thereof to sea is reasonable and justifiable.

Desertion.

Section 243 *of Act of* 1854.—Whenever any seaman who has been lawfully engaged, or any apprentice to the sea service, commits any of the following offences, he shall be liable to be punished summarily, as follows (that is to say):—

(I.) For desertion, he shall be liable . . . . . if such desertion takes place abroad, at the discretion of the court, to forfeit all or any part of the wages or emoluments he may earn in any other ship in which he may be employed until his return to the United Kingdom, and to satisfy any excess of wages paid by the master or owner of the ship from which he deserts to any substitute engaged in his place at a higher rate than the rate stipulated to be paid to him.

(II.) For neglecting or refusing, without reasonable cause, to join his ship, or to proceed to sea in his ship, or for absence without leave at any time within twenty-four hours of the ship's sailing . . . . . he shall be liable, ... at the discretion of the court, to forfeit out of his wages a sum not exceeding the amount of two days' pay, and, in addition, for every twenty-four hours of absence, either a sum not exceeding six days' pay, or any expenses which have been properly incurred in hiring a substitute.

Section 257 *of Act of* 1854.—Every person who by any means whatever persuades or attempts to persuade any seaman or apprentice to neglect or refuse to join or to proceed to sea in, or to desert from his ship, or otherwise to absent himself from his duty, shall for each such offence in respect of each such seaman or apprentice incur a penalty not exceeding ten pounds; and every person who wilfully harbours or secretes any seaman or apprentice who has deserted from his ship, or who has wilfully neglected or refused to join his ship, knowing or having reason to believe such seaman or apprentice to have so done, shall for every such seaman or apprentice so harboured or secreted incur a penalty not exceeding twenty pounds.

Section 10 *of Act of* 1880.—The following provisions shall, from the commencement of this Act, have operation within the United Kingdom:—

(I.) A seaman or apprentice to the sea service shall not be liable to imprisonment for deserting or for neglecting or refusing without reasonable cause to join his ship, or to proceed to sea in his ship, or for absence without leave at any time within twenty-four hours of his ship's sailing from any port, or for absence at any time without leave, and without sufficient reason, from his ship or from his duty.

(II.) . . . . . .

(III.) If a seaman or apprentice to the sea service intends to absent himself from his ship or his duty, he may give notice of his intention, either to the owner or to the master of the ship, not less than forty-eight hours before the time at which he ought to be on board his ship; and, in the event of such notice being given, the court shall not exercise any of the powers conferred on it by section two hundred and forty-seven of the Merchant Shipping Act, 1854.

(IV.) Subject to the foregoing provision of this section, the powers conferred by section two hundred and forty-seven of the Merchant Shipping Act, 1854, may be exercised, notwithstanding the abolition of imprisonment for desertion and similar offences, and of apprehension without warrant.

Section 247 *of Act* of 1854.—Whenever any seaman or apprentice is brought before any court on the ground of his having neglected or refused to join or to proceed to sea in any ship in which he is engaged to serve, or of having deserted or otherwise absented himself therefrom without leave, such court may, if the master or the owner or his agent so requires . . . . . cause him to be conveyed on board for the purpose of proceeding on the voyage, or deliver him to the master or any mate of the ship, or the owner or his agent, to be by them so conveyed, and may in such case order any costs and expenses properly incurred by or on behalf of the master or owner by reason of the offence to be paid by the offender, and, if necessary, to be deducted from any wages which he has then earned, or which by virtue of his then existing engagement he may afterwards earn.

PROPOSED AMENDMENTS. [§ 65

Desertion.

I.—That shipowners should have the same power of arresting the wages of seamen deserting or failing to join in home ports as they possess in foreign ports.

II.—That accessories after the fact should cease to be criminally liable.

III.—That desertion or failure to join should be once more made a crime, and summarily punishable as such by fine or imprisonment.

IV.—That desertion or failure to join should be criminally punishable, provided that the man in question had no intention of fulfilling the terms of the articles at the time when he signed them.

V.—That sub-sections three and four should read as follows:—"If a seaman or apprentice to the sea service intends to absent himself from his ship or his duty, he may give notice of his intention either to the owner, master, mate, or engineer in charge, or other agent connected with the ship, not less than twelve hours previous to the sailing of the ship, provided that he has been on the articles twenty-four hours prior to the sailing of the vessel. Should he have been signed a lesser period than twenty-four hours prior to the ship's sailing, three hours shall be deemed sufficient before the time at which he ought to be on board ship. And in the event of such notice being given, the court shall not exercise any of the powers conferred on it in section two hundred and forty-seven of the Merchant Act of 1854."

VI.—That masters should be required to give the same notice as the men for cancelling the contract of hiring after articles have been signed.

VII.—That seamen should be permitted to cancel their contracts, by giving forty-eight hours' notice, only when they have a reasonable excuse for so doing.

§ 650.] TEXT OF THE ACT.

Deck Cargoes, Overloading, &c.

Section 24 *of Act of* 1876.—After the first day of November one thousand eight hundred and seventy-six, if a ship, British or foreign, arrives between the last day of October and the sixteenth day of April in any year at any port in the United Kingdom from any port out of the United Kingdom, carrying as deck cargo, that is to say, in any uncovered space upon deck, or in any covered space not included in the cubical contents forming the ship's registered tonnage, any wood goods coming within the following descriptions (that is to say):—

(*a.*) Any square, round, waney or other timber, or any pitch, pine, mahogany, oak, teak, or other heavy wood goods whatever; or

(*b.*) Any more than five spare spars or storespars, whether or not made, dressed, and finally prepared for use; or

(*c.*) Any deals, battens, or other light wood goods of any description to a height exceeding three feet above the deck;

the master of the ship, and also the owner, if he is privy to the offence, shall be liable to a penalty not exceeding five pounds for every hundred cubic feet of wood goods carried in contravention of this section, and such penalty may be recovered by action or an indictment or to an amount not exceeding one hundred pounds (whatever may be the maximum penalty recoverable) on summary conviction.

Rating of Seamen, Discharges, &c.

Section 172 *of Act of* 1854.—Upon the discharge of any seaman, or upon payment of his wages, the master shall sign and give him a certificate of his discharge, in a form sanctioned by the Board of Trade, specifying the period of his service and the time and place of his discharge; and if any master fails to sign and give to any such seaman such certificate of discharge he shall for each such offence incur a penalty not exceeding ten pounds; and the master shall also, upon the discharge of every certificated mate whose certificate of competency or service has been delivered to and retained by him, retain such certificate, and shall in default incur a penalty not exceeding twenty pounds.

Section 7 *of Act of* 1880.—A seaman not entitled to the rating of A.B., that is to say, of an able bodied seaman, unless he has served at sea for four years before the mast; but the employment of fishermen in registered decked fishing vessels shall only count as sea service up to the period of three years of such employment; and the rating of A.B. shall only be granted after at least one year's service in a trading vessel in addition to three or more years' sea service on board of registered decked fishing vessels.

Such service may be proved by certificates of discharge . . . or by other satisfactory proof.

Water-tight Compartments.

Section 300 *of Act of* 1854.—The following rules shall be observed with respect to the build of iron steam ships (that is to say):—

(I.) Every steam ship built of iron of one hundred tons or upwards, the building of which commenced after the twenty-eighth day of August one thousand eight hundred and forty-six, and every steamship built of iron of less burden than one hundred tons, the building of which commenced after the seventh day of August one thousand eight hundred and fifty-one (except ships used solely as steam tugs) shall be divided by substantial transverse water-tight partitions, so that the after part of such ship shall be separated from the engine rooms by another of such partitions:

(II.) Every steam ship built of iron, the building of which commences after the passing of this Act, shall be divided by such partitions as aforesaid into not less than three equal parts, or as nearly so as circumstances permit:

(III.) In such last-mentioned ships, each such partition as aforesaid shall be of equal strength with the side plates of the ship with which it is in contact:

(IV.) Every screw steam ship built of iron, the building of which commenced after the passing of this Act, shall, in addition to the above partitions, be fitted with a small water-tight compartment enclosing the after extremity of the shaft:

PROPOSED AMENDMENTS. [§ 650.]

Deck Cargoes, Overloading, &c.

I.—That deck loading on both British and foreign ships within the jurisdiction should be altogether prohibited during the winter and allowed during the summer only to the extent of three feet.

II.—That deck loading on both British and foreign ships within the jurisdiction should be altogether prohibited for winter voyages across the Atlantic ocean.

III.—That, in the case of outgoing vessels, the issue of clearance papers should be made contingent upon the requirements of the law as to loading being satisfactorily carried out, and, in the case of incoming vessels, the magistrates should be empowered to confiscate all the timber carried illegally.

Rating of Seamen, Discharges, &c.

I.—That discharges should be exchanged for certificates of competency, similar to those issued to officers, and obtainable by a practical examination.

II.—That it should be made a penal offence to employ as an A.B. a seaman unprovided with such a certificate.

III.—That similar certificates should be issued under similar conditions to firemen, cooks, and stewards.

IV.—That discharges should be "continuous," *i.e.*, should contain a record of the whole of a seaman's career instead of his last voyage.

Water-tight Compartments.

I.—That section 300 of the Act of 1854, repealed by the Act of 1862, should be re-enacted.

[§ 650.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 65

And an officer of customs or other person shall grant a clearance or transire for any iron steam ships required to be divided or fitted as aforesaid, unless the same is so divided and fitted; and if any such ship attempts to ply or go to sea without such clearance or transire, any such officer may detain her until she is so divided and fitted; and if any steam ship herein-before required to be so divided or fitted plies or goes to sea without being so divided or fitted, the owner shall incur a penalty not exceeding one hundred pounds.

Section 2 *of Act of* 1862.—The enactments described in Table (A.) in the schedule of this Act shall be repealed as therein mentioned.

Schedule: Table A.—Sections 300, 323, 504, and 505 to be repealed immediately on the passing of this Act.

Liability of Shipowners.

Sections 502–516 *of Act of* 1854.

Sections 54–56 *of Act of* 1862.

Liability of Shipowners.

I.—That the Employers Liability Act of 1880 should be extended to seamen.

Presence of unauthorised Persons on board Ship.

Section 5 *of Act of* 1880.—When a ship is about to arrive, is arriving, or has arrived at the end of her voyage, every person not being in Her Majesty's service or not being duly authorised by law for the purpose, who—

(I.) Goes on board the ship without the permission of the master, before the seamen lawfully leave the ship at the end of their engagement, or are discharged (whichever last happens); or

(II.) Being on board the ship, remains there after being warned to leave by the master or by a police officer, or by any officer of the Board of Trade or of the Customs:

shall for every such offence be liable on summary conviction to a fine not exceeding twenty pounds, or, at the discretion of the court to imprisonment for any term not exceeding six months; and the master of the ship, or any officer of the Board of Trade, may take him into custody and deliver him up forthwith to a constable, to be taken before a court or magistrate capable of taking cognizance of the offence, and dealt with according to law.

Presence of unauthorised Persons on board Ship.

I.—That the provisions of this section should be extended to ships on the point of departure.

Life-saving Appliances.

Section 6 *of Act of* 1888.—The rules made under this Act shall not apply to any sea-fishing boat which is for the time being registered in pursuance of the Sea Fisheries Act, 1888.

Life-saving Appliances,

I.—That the Merchant Shipping (Life-saving Appliances) Act, 1888, should apply to fishing boats.

Fishing Boats.

Section 8 *of Act of* 1887.—(1.) After the first day of July one thousand eight hundred and eighty-eight, a trawler of twenty-five tons registered tonnage or upwards shall not go to sea from any port in the United Kingdom unless the second hand (as well as the skipper) thereof is the holder of a certificate of competency or service entitling him . . . . . to act as second hand of the trawler.

(2.) If any such trawler goes to sea contrary to this section, the owner thereof shall incur for each such offence a penalty not exceeding twenty pounds.

(3.) Every person who, except in cases of necessity—

(*a.*) Having been engaged to serve as second hand of any such trawler, and not being the holder of a certificate entitling him . . . . . to act as second hand of the trawler, serves as such second hand; or

(*b.*) Employs any person as second hand of any such trawler without having ascertained that he is the holder of a certificate entitling him . . . to act in that capacity:

shall for each such offence incur a penalty not exceeding twenty pounds.

Fishing Boats.

I.—That the provisions of the Act relating to certificates should be amended.

THE METALLIFEROUS MINES REGULATION ACT, 1872.

651. *Section* 3 *of the Act of* 1872.—This Act shall apply to every mine of whatever description, other than a mine to which the Coal Mines Regulation Act, 1872, applies (*i.e.*, mines of coal, mines of stratified ironstone, mines of shale, and mines of fire-clay).

I.—That the Act should apply to open quarries.

651.]	Text of the Act.	Proposed Amendments.	[§ 651.]
	Section 41 *of the Act of* 1872.—In this Act, unless the context otherwise requires— The term "mine" includes every shaft in the course of being sunk, and every level and inclined plane in the course of being driven for commencing or opening any mine, or for searching for or proving minerals, and all the shafts, levels, planes, works, machinery, tramways, and sidings, both below ground and above ground, in and adjacent to a mine, and any such shaft, level, and inclined plane, and belonging to the mine: The term "shaft" includes pit.		
	Section 15 *of the Act of* 1872.—A Secretary of State may from time to time appoint any fit persons to be inspectors of mines to which this Act applies . . . . . Any person appointed or acting as inspector under the Coal Mines Regulation Act, 1872, if directed by a Secretary of State to Act as an inspector under this Act may so act, and shall be deemed to be an inspector under this Act.	II.—That slate quarries, both underground and open should be placed under a special staff of inspectors.	

THE METROPOLITAN PUBLIC CARRIAGE ACT, 1869.

652.	*Section* 6.—One of Her Majesty's Principal Secretaries of State may from time to time license to ply for hire within the limits of this Act hackney and stage carriages, to be distinguished in such a manner as he may by order prescribe.	I.—That the licenses should be granted by the London County Council or the Board of Trade, which authority should limit the number of licenses according to public requirements and convenience.	
	Section 9, *Sub-section* 3.—The said Secretary of State may from time to time, by order, make regulations for all or any of the following purposes; that is to say, for fixing the rates or fares, as well for time as distance, to be paid for hackney carriages, and for securing the due publication of such fares; provided that it shall not be compulsory on the driver of any hackney carriage to take passengers at a less fare than the fare payable at the time of the passing of this Act.	II.—To enable the Secretary of State to fix the price paid for cabs by drivers to proprietors.	
	Section 11.—Any license grantable by a Secretary of State under this Act may, if the said Secretary of State so direct, be granted by the Commissioner of the Metropolitan Police, or by such other person as the said Secretary of State appoints for the purpose.	III.—To transfer the control of the cab traffic from the Commissioner of the Metropolitan Police to the London County Council.	
	Section 13.—All penalties under this Act may be recovered summarily in the manner directed by 11 & 12 Vict. c. 43., and any Act amending the same.	IV.—To empower magistrates to deal summarily with cab thieves.	
	Section 15.—All the provisions of the Acts relating to hackney carriages and metropolitan stage carriages in force at the time of the commencement of this Act shall, subject to any alteration made therein by this Act or by any order or regulation of the said Secretary of State made in pursuance of this Act, continue in force, and all such provisions of the said Acts as relate to licenses granted under those Acts or any of them, subject to any alteration as aforesaid, apply to licenses granted under this Act.	V.—To repeal 46 Geo. III. c. 134. s. 35., forbidding cabs to ply for hire within 300 feet of any house in Bloomsbury Square, under penalty of 40*s.* or a month's hard labour. VI.—To amend 6 & 7 Vict. c. 86. s. 38., by substituting 10*l.* for 3*l.* as the amount recoverable by proprietors from drivers for wilful damage to cabs. VII.—To repeal 6 & 7 Vict. c. 86. s. 35., which enables proprietors to be called upon to produce drivers.	

THE MIDLAND RAILWAY (ADDITIONAL POWERS) ACT, 1867.

653.	*Section* 57.—The per-centage of their salaries which the officers and servants of the company shall contribute to the fund not exceeding the rate of two pounds ten shillings for each one hundred pounds of their respective salaries in the case of officers under 40 years of age at the time of becoming contributors to the fund.	I.—To prevent evasions of the provision of the Act to the effect that the company should pay an equivalent amount to the men's contributions to the mutual insurance fund.	
	Section 58.—The company shall, at the end of each and every half year after the establishment of the superannuation fund, contribute out of the revenues of the company a sum equal in amount to the sum which, during the same half year, has been contributed thereto by the officers and servants of the company, and such further sum as the company and the committee from time to time agree upon, not exceeding one half of such specified contribution.	II.—To repeal the provision to the effect that any member dismissed for dishonesty or retiring to avoid such dismissal should forfeit the whole of his contributions. III.—To establish instead a fund under the control of Government, but composed of subscriptions from the parties. IV.—To enact that the third of the three actuaries appointed in connexion with the fund should be appointed by the Chief Registrar of Friendly Societies or some other independent authority.	

[§ 654.] THE OUSE (LOWER) IMPROVEMENT ACT, 1884. [§ 65

Text of the Act.	Proposed Amendments.
654. *Section* 46 *of the Act of* 1884.—In addition to the byelaws which, under the provisions with respect to the byelaws to be made by the undertakers in the Harbours, Docks, and Piers Clauses Act, 1847, contained, the undertakers may from time to time make, it shall be lawful for them from time to time to make, alter, and repeal and renew such byelaws as they think fit for all or any of the following purposes (that is to say)	I.—That the Act should be brought more immediately under the control of the Board of Trade.
Section 47 *of the Act of* 1884.—All byelaws made by the undertakers under this Act, except so far as they relate solely to the undertakers or their officers or servants, shall be subject to the provisions, with respect to byelaws, of the Harbours, Docks, and Piers Clauses Act, 1847, incorporated with this Act, but shall not have any force or effect unless and until the same be confirmed by the Board of Trade.	

THE PAYMENT OF WAGES IN PUBLIC-HOUSES PROHIBITION ACT, 1883.

655. *Section* 3 *of the Act of* 1883.—From and after the passing of this Act no wages shall be paid to any workman at or within any public-house, beershop, or place for the sale of any spirits, wine, cyder, or other spirituous or fermented liquor, or any office, gardens, or place belonging thereto or occupied therewith save and except such wages as are paid by the resident, owner or occupier of such public-house, beershop, or place to any workman bonâ fide employed by him.	I.—That, in the case of canal boats, lighters, &c., the payment of freightage in public-houses should be prohibited.
Every person who contravenes or fails to comply with or permits any person to contravene or fail to comply with this Act shall be guilty of an offence against this Act.	II.—To forbid orders to workmen being given in public-houses.
And in the event of any wages being paid by any person in contravention of the provisions of this Act for or on behalf of any employer, such employer shall himself be guilty of an offence against this Act, unless he prove that he had taken all reasonable means in his power for enforcing the provisions of this Act and to prevent such contravention.	III.—That publicans should be liable for permitting the Act to be broken, only if it can be proved that they were aware that wages were being paid illegally under their roof.
	IV.—That a member of a gang of workmen should cease to be liable for paying his fellows in a public-house, such liability resting solely on the employer.
Section 4 *of the Act of* 1883.—Every person who is guilty of an offence against this Act shall be liable to a penalty not exceeding ten pounds for each offence; and all offences against this Act may be prosecuted and all penalties under this Act may be recovered by any person summarily in England in the manner provided by the Summary Jurisdiction (Scotland) Acts, 1864 and 1881.	V.—That offences against the Act should be punished by imprisonment instead of by fine.

THE PREFERENTIAL PAYMENTS IN BANKRUPTCY ACT, 1888.

656. *Section* 1.—(*b.*) All wages of any labourer or workman not exceeding twenty-five pounds, whether payable for time or for piece work in respect of services rendered to the bankrupt or the company during two months before the date of the receiving order, or as the case may be, the commencement of the winding up: Provided that where any labourer in husbandry has entered into a contract for the payment of a portion of his wages in a lump sum at the end of the year of hiring, he shall have priority in respect of the whole of such sum, or a part thereof, as the court may decide to be due under the contract proportionate to the time of service up to the date of the receiving order, or, as the case may be, the commencement of the winding up.	I.—To empower the official receiver or trustee to advance wages, on the date at which they become due, on the security of the assets in the estate.

THE RAILWAY REGULATION ACT, 1893.

657. *Section* 1.—If it is represented to the Board of Trade, by or on behalf of the servants or any class of the servants, of the railway company that the hours of labour of these servants, or of that class or, in any special case, of any particular servants engaged in working the traffic, or any part of the lines of the company, are excessive, or do not provide sufficient intervals of uninterrupted rest, between the periods of duty, or sufficient relief in respect of Sunday duty, the Board of Trade shall inquire into the representation.	I.—To enforce a maximum working day of ten hours for railway servants in general, and eight hours for signalmen on main lines, in boxes always open. To limit a week's labour to six shifts, and to cause Sunday and overtime work to be paid for at the rate of time and a half.
(2.) If it appears to the Board of Trade, either on such representation or otherwise, that there is, in the case of any railway company, reasonable ground of complaint with respect to any of the matters aforesaid, the Board of Trade shall order the company to submit	II.—To allow, on application to the Board of Trade by a majority of the men employed in handling the traffic in the service or in any one grade of the service of any railway company, the following regulations to be enforced in respect of the applicants:—
	(i.) The regulations of the hours of duty of railway men shall be such that the period of 10 hours shall not be exceeded in any one day's work, nor shall those

[§ 657.] TEXT OF THE ACT.

to them within a period specified by the Board of Trade such a schedule of time for the duty of the servants or of any class of the servants of the company as will in the opinion of the Board bring the actual hours of work within reasonable limits, regard being had to all the circumstances of the traffic and to the nature of the work.

(3.) If a railway company fail to comply with any such order, or to enforce the provisions of any schedule submitted to the Board in pursuance of any such order and approved by the Board, the Board may refer the matter to the Railway and Canal Commission, and thereupon the Railway and Canal Commission shall have jurisdiction in the matter, and the Board may appear in support of the reference and the Commission may make an order requiring the railway company to submit to the Commission, within a period specified by the Commission, such a schedule as will, in the opinion of the Commission, bring the actual hours of work within reasonable limits.

(4.) If a railway company fail to comply with any order made by the Railway and Canal Commission in pursuance of this section, or to enforce the provision of any schedule submitted to the Railway and Canal Commission, in pursuance of any such order, and approved by that Commission, the company shall be liable to a fine not exceeding one hundred pounds for every day during which the default continues.

(5.) The Railway and Canal Traffic Act, 1888, shall apply in the case of any jurisdiction exercised or order made by the Railway and Canal Commission under this Act as if it were exercised or made under or for the purposes of that Act: Provided that notwithstanding anything in section five of that Act the jurisdiction of the Commission for the purposes of this Act may be exercised by the two appointed Commissioners.

(6.) The Board of Trade and the Railway and Canal Commission respectively may from time to time rescind or vary any order made by them under this section, and make such supplemental order as the circumstances of the case may appear to require.

(7.) This Act shall not apply to any servant of a railway company who is in the opinion of the Board of Trade wholly employed either in clerical work or in the company's workshop.

PROPOSED AMENDMENTS. [§ 657.]

duties be resumed without there having been allowed an interval of nine hours for rest, excepting in the case of accidents. Where meal hours are allowed, an hour may be deducted from the total of the day's work in cases only where the workman has been for that period free to leave the railway company's premises and clear of all responsibilities and duties.

(ii.) In the case of signalmen and pointsmen, the signal cabins shall be scheduled into three classes, the hours of duty in each to be restricted as under:—

(*a.*) First class, not to exceed eight hours per day.
(*b.*) Second class, not to exceed nine hours per day.
(*c.*) Third class, not to exceed ten hours per day.

(iii.) The hours of duty of men employed exclusively in the occupation of shunting shall not exceed eight per day. In the event of a railway company keeping a workman on duty beyond the prescribed number of hours, it shall pay such workman for the said overwork at twenty-five per centum over and above the rate of pay for the ordinary day's work. Any failure to comply with this requirement shall, on being proved to the Board of Trade, be met by an order of the Board of Trade enforcing such payment. In any case where the day's work of a railway man exceeds twelve hours, it shall be reported to the Board of Trade, who will inquire into the cause of the said overwork, and, unless the same be found to have occurred through some accident or other unforeseen occurrence beyond the control of the responsible officers of the railway company, the Board of Trade shall have power to impose a penalty on the company for the offence.

III.—To make it compulsory for engine drivers to pass an examination and obtain certificates of competency from the Board of Trade.

IV.—That the Board of Trade should have power to appoint sub-inspectors to supervise the working of railways under the direction of the present inspectors, and especially to inquire into accidents to individual railway servants, who are not at present specially brought to the notice of the Board of Trade and to ascertain whether such accidents were due to excessive hours of work.

THE SHOP HOURS ACT, 1892.

658. *Section* 1.—This Act may be cited as the Shop Hours Act, 1892.

Section 2.—This Act shall come into operation on the first day of September one thousand eight hundred and ninety-two.

Section 3.—(1.) No young person shall be employed in or about a shop for a longer period than seventy-four hours, including meal hours, in any one week.

(2.) No young person shall, to the knowledge of the employer, be employed in or about a shop, having been previously on the same day employed in any factory or workshop, as defined by the Factory and Workshop Act, 1878, for the number of hours permitted by the said Act, or for a longer period than will, together with the time during which he has been so previously employed, complete such number of hours.

Section 4.—In every shop in which a young person is employed a notice shall be kept exhibited by the employer in a conspicuous place, referring to the provision of this Act, and stating the number of hours in the week during which a young person may lawfully be employed in that shop.

Section 5.—Where any young person is employed in or about a shop contrary to the provision of this Act, the employer shall be liable to a fine not exceeding one pound for each person so employed.

Section 6.—Where the employer of any young person is charged with any offence against this Act, he shall be entitled upon information duly laid by him to have any other person whom he charges as the actual offender brought before the court at the time appointed for hearing the charge, and if after the commission of the offence has been proved, the said employer proves to the satisfaction of the court that he has used due diligence to enforce the execution of the Act, and that the said other person has committed the offence in

I.—To make the closing of shops in each town at a fixed hour compulsory.

II.—To give local authorities power to enforce any regulations for the closing of shops, which shall receive the support of two-thirds of the shopkeepers in any town or district.

III.—To compel employers to give references except for a just cause.

IV.—To forbid shop assistants signing agreements not to take future situations within a certain distance of theirpresent situation.

V.—Instead of enforcing the early closing of shops, to introduce an eight hours' day for shop assistants.

VI.—To establish a fair rent court for shopkeepers.

VII.—To require shop assistants engaged in heavy work to have medical certificates of fitness.

VIII.—To insert in an Act enforcing early closing by local option a provision as to intervals for dinner and tea.

IX.—To extend the operation of the Act to every shop assessed for rates of 13*l.* and upwards.

X.—To exempt certain trades from its provisions, *e.g.*, tobacconists, restaurants, chemists, &c.

XI.—To suggest to the local authorities the advisability of ordering the shops within their jurisdiction to be closed at 7.0 p.m. on four, and at 9.0 p.m. or 10.0 p.m. on two days of the week.

XII.—To state in the text of the Act the fund from which town or county authorities are to pay the inspectors they "may appoint."

[§ 658.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 6

question without his knowledge, consent, or connivance, the said other person shall be summarily convicted of such offence and the occupier shall be exempt from any fine.

Section 7.—All offences under this Act shall be prosecuted, and all fines shall be recovered in like manner as offences and fines are prosecuted and recovered under the Fact and Workshop Act, 1878, and sections eighty-eight, eighty-nine, ninety, and ninety-one of the said Act, and so much of section ninety-two thereof as relates to evidence respecting the age of any person, and the provision relating to the application of the said Act to Scotland and Ireland, so far as these provisions are applicable, shall have effect as if re-enacted in this Act, and in terms made applicable thereto.

Section 8.—The council of any county or borough, and in the city of London the Common Council, may approve such inspectors as they may think necessary for the execution of this Act within the areas of their respective jurisdiction, and sections sixty-eight and seventy of the Factory and Workshop Act, 1878, shall apply in the case of any such inspector as if he were appointed under the Act, and as if the expression workshop as used in those sections included any shop within the meaning of this Act.

The powers conferred by this section may be exercised in Ireland by the council of any municipal borough, and by the commissioners of any town or township.

Section 9.—In this Act unless the context otherwise requires:—

"Shop" means retail and wholesale shops, market stalls, and warehouses in which assistants are employed for hire, and includes licensed public-houses and refreshment houses of any kind.

"Young person" means a person under the age of eighteen years.

Other words and expressions have the same meanings respectively as in the Factory and Workshops Acts, 1878.

Section 10.—Nothing in this Act shall apply to a shop where the only persons employed are members of the same family dwelling in the building of which the shop forms part, or to which the shop is attached, or to members of the employer's family so dwelling, or to any person wholly employed as a domestic servant.

XIII.—To appoint Government Inspectors under the Act.

THE THAMES CONSERVANCY ACTS, 1857–1870.

659. *Section* 2 *of the Act of* 1857.—There shall be twelve conservators for carrying this Act into execution, and such conservators shall be a body corporate by the name of "the Conservators of the River Thames," and by that name shall have perpetual succession and a common seal, and shall have power . . . . . .

Section 3 *of the Act of* 1857.—The Lord Mayor shall be one of the conservators, two other of such conservators shall be aldermen of the said city, four other of such conservators shall be members of the Common Council of the said city, one other of such conservators shall be the Deputy Master of the Trinity House for the time being, two others of such conservators shall be appointed by the Lord High Admiral of the United Kingdom of Great Britain and Ireland, or by the Commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland, one other of such conservators shall be appointed by the Lords of the Committee of the Privy Council appointed for the consideration of matters relating to trade and foreign plantations, and one other of such conservators shall be appointed by the Master, Wardens, and Assistants of the Corporation of Trinity House of Deptford Strond.

Section 5 *of the Act of* 1864.—In addition to the twelve conservators acting under the principal Act, ... there shall be six conservators elected under this Act . . . . . .

Section 6 *of the Act of* 1864.—The six additional conservators . . . . . shall, ... be elected by the following classes of electors . . . . . ; namely,

Two by owners of shipping registered in the Custom House books of the port of London:

One by owners of steamers surveyed and certificated as passenger steamers by the Board of Trade (under

I.—That the authority in control of the Thames should be popularly elected.

659.]

TEXT OF THE ACT.

the Merchant Shipping Act of 1854, and Acts amending the same), and plying on the River Thames not seaward of Gravesend . . . . . .

Two by owners of lighters and steam tugs used on the River Thames:

One by occupiers of docks on the River Thames established under charter or Act of Parliament, and of legal quays and sufferance wharves on the River Thames appointed by the Commissioners of Customs . . . .

Section 3 *of the Act of* 1866.—In addition to the existing number of eighteen conservators of the River Thames constituting the body corporate of the conservators, there shall be five other conservators.

Section 6 *of the Act of* 1866.—Of the conservators added by this Act, one shall be appointed by the Board of Trade; . . . . . .

Section 7 *of the Act of* 1866.—Of the conservators added by this Act four shall be elected by such persons as for the time being respectively possess some one or more of the qualifications required for Upper Navigation Commissioners, and as before the passing of this Act have taken and subscribed the oaths or affirmations by the Upper Navigation Act of 1795 required to be taken and subscribed by them respectively so as to be authorised to act as Upper Navigation Commissioners if this Act had not been passed, or as after the passing of this Act make and sign at a conservancy meeting a declaration of qualification in the form given in the Second Schedule to this Act, or as after the passing of this Act deliver to the secretary of the conservators such a declaration made and signed in the presence of and attested by a justice of the peace or an attorney or solicitor of one of the superior courts.

Section 4 *of the Act of* 1870.—A person shall not be qualified to be an elector or an elected conservator under the Thames Act of 1866 at any election after the passing of this Act by being seized of lands, or being heir apparent, or residing as therein mentioned except subject to the conditions following (namely):—

Not by being seized of lands, as therein mentioned, unless the lands or a sufficient part thereof are or is in a parish or parishes some part of which or of each of which is within five miles of the Thames:

Not by being heir apparent, as therein mentioned, unless the estate of the person of whom he is heir apparent, or a sufficient part thereof, is in such a parish or parishes as aforesaid:

Not by residing, as therein mentioned, unless he resides in such a parish as aforesaid.

PROPOSED AMENDMENTS.

[§ 659.]

THE TRADE UNION ACTS, 1871–1893.

660. *Section* 4 *of the Act of* 1871.—Nothing in this Act shall enable any court to entertain any legal proceeding instituted with the object of directly enforcing or recovering damages for the breach of any of the following agreements (namely):—

2. Any agreement for the payment by any person of any subscription or penalty to a trade union.

3. Any agreement for the application of the funds of a trade union—

a. To provide benefits to members.

But nothing in this section shall be deemed to constitute any of the above-mentioned agreements unlawful.

Section 8 *of the Act of* 1871.—All real and personal estate whatsoever belonging to any trade union registered under this Act shall be vested in the trustees for the time being of the whole union, appointed as provided by this Act, for the use and benefit of such trade union and the members thereof.

Section 13 *of the Act of* 1871.—With respect to the registry, under this Act, of a trade union, and of the rules thereof, the following provisions shall have effect:—

1. An application to register the trade union and printed copies of rules, together with a list of the titles and names of the officers, shall be sent to the registrar under this Act.

2. The registrar, upon being satisfied that the trade union has complied with the regulations respecting registry in force under this Act, shall register such trade union and such rules.

3. No trade union shall be registered under a name identical with that by which any other existing trade

I.—To extend to trade unions the power of recovering contributions due from members.

II.—To prevent portions of trade union funds appropriated to benefits being expended in strikes.

III.—To prohibit trade unions supporting members out of employment through their own misconduct.

IV.—To allow trade union funds to be invested in co-operative enterprises.

V.—To give greater facilities for the registration of trade unions.

VI.—To render void the registration of any code of trade union rules that contains clauses providing for the restriction of the proportion of apprentices to journeymen.

[§ 660.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 6

union has been registered, or so nearly resembling such name as to be likely to deceive the members or the public.

4. Where a trade union applying to be registered has been in operation for more than a year before the date of such application, there shall be delivered to the registrar before the registry thereof a general statement of the receipts, funds, effects, and expenditure of such trade union in the same form, and showing the same particulars, as if it were the annual general statement required, as herein-after mentioned, to be transmitted annually to the registrar.

5. The registrar, upon registering such trade union, shall issue a certificate of registry, which certificate, unless proved to have been withdrawn or cancelled, shall be conclusive evidence that the regulations of this Act with respect to registry have been complied with.

6. One of Her Majesty's Principal Secretaries of State may from time to time make regulations respecting registry under the Act, and respecting the seal (if any) to be used for the purpose of such registry, and the forms to be used for such registry, and the inspection of documents kept by the registrar under this Act, and respecting the fees (if any) to be paid on registry, not exceeding the fees specified in the Second Schedule to this Act, and generally for carrying this Act into effect.

Section 6 *of the Act of* 1876.—Trade unions carrying or intending to carry on business in more than one country shall be registered in the country in which their registered office is situate; but copies of the rules of such unions and of all amendments of the same, shall, when registered, be sent to the registrar of each of the other countries, to be recorded by him, and until such rules be so recorded the union shall not be entitled to any of the privileges of this Act or the principal Act, in the country in which such rules have not been recorded, and until such amendments of rules shall be recorded the same shall not take effect in such country.

In this section "country" means England, Scotland, or Ireland.

VII.—That registration performed in one country of the United Kingdom should hold good in all the others.

Section 1 *of the Act of* 1893.—A trade union duly registered under the Trade Union Acts, 1871 and 1876, shall be entitled to exemption from income tax chargeable under Schedules A., C., and D. of any Acts for granting duties of income tax in respect of the interest and dividends of the trade union applicable and applied solely for the purpose of provident benefits.

VIII.—To exempt from taxation the interest derived from the investment of such portions of trade union funds as are specifically set apart for provident purposes.

(*Already adopted.*)

THE TRUCK ACT, 1887.

661. *Section* 8.—No deductions shall be made from a workman's wages for sharpening or repairing tools, except by agreement not forming part of the contract of hiring.

I.—To allow agreements to be made only for reasonable deductions, *i.e.*, not for pick sharpening, lamps, doctor's fees, and mutual insurance.

II.—To prohibit deductions from the wages of spring knife cutlers for workroom, gas, power, and the use of tools.

III.—To incorporate in the Act a decision arrived at by a voluntary board of conciliation in connexion with the nail trade, fixing a minimum rate of wages.

IV.—To compel every workman to submit to a certain deduction from his wages, for the purpose of purchasing shares in his employer's business at par, when the aggregate amount deducted reaches a certain figure.

THE WATERMEN'S AND LIGHTERMEN'S AMENDMENT ACT, 1859.

662. *Section* 23 *of the Act of* 1859.—When and so often as any member of the said court dies or is removed, the said court of master, wardens, and assistants shall elect from amongst the freemen for the time being of the said company such persons as to them seem meet, for supplying such vacancy, and the person so elected shall continue in the said office during his life, unless he resigns, or is removed therefrom, as aforesaid.

I.—That the authority in control of the Thames should be popularly elected.

Section 46 *of the Act of* 1859.—Every freeman of the said company (the Company of Watermen and Lightermen of the River Thames), or widow of a freeman, may take such apprentices as he or she thinks fit, for the purpose of having them instructed in the navigation of barges, lighters, boats, vessels, and other like craft, subject to the following conditions, that no apprentice

II.—That apprentices should not be permitted to work for any one but the person to whom they are bound.

62.] TEXT OF THE ACT. PROPOSED AMENDMENTS. [§ 662.]

shall be bound for a less period than five years, and that the persons to whom such apprentice is bound shall undertake to find him proper board and lodging, either on his own premises or elsewhere.

Section 54 of the Act of 1859.—If any person, not being a freeman licensed in pursuance of this Act, or an apprentice, qualified according to this Act, to a freeman, or to the widow of a freeman of the said company (except as herein-after is mentioned) shall at any time act as a waterman or lighterman, or ply, or work or navigate any wherry, passenger boat, lighter, vessel or other craft, upon the said river, from or to any place or places, or ship or vessel, within the limits of this Act, for hire or gain (except as herein-after mentioned), every person shall forfeit and pay, for every such offence, any sum not exceeding forty shillings: Provided always, that it shall be lawful for any person who shall obtain a license as is herein provided, or is an apprentice qualified as herein provided, to work as a lighterman within the meaning of this Act.

III.—That it should be made illegal for a ship's crew to usurp the proper function of qualified watermen and lightermen by taking men to and from the ship in the ship's boat.

GEOFFREY DRAGE,
Secretary.

NOTE.

In August 1891, the Secretary was directed to communicate copies of the following letter to the War Office and Admiralty, with the request that they should be forwarded to the Superintendents of Her Majesty's Dockyards, Arsenals, and Clothing Factories. The Secretary was further directed to send copies of the same to the County, Municipal, and Local Authorities in Great Britain and Ireland. The Returns came in slowly, the last being received in 1893, when the Secretary was directed to prepare the following Memorandum from the answers received, for the use of the Commission. Nearly nine hundred returns have been received; of these nearly three hundred were made by Lunatic Asylums, Poor Law Unions, Hospitals, and other similar bodies with which it has not been thought desirable to deal in this memorandum.

ROYAL COMMISSION ON LABOUR,

Telegraphic Address—
"ENTWINED, LONDON."

44, PARLIAMENT STREET,
LONDON, S.W.,
189 .

SIR,

The Royal Commission on Labour having decided to inquire into the Policy of State Regulation of Hours of Labour and the effect of State or Municipal Employment of Labour, I am directed to ask you if you would favour the Commission with any information in your power on the subject, and especially on the following points:—

1. What number of persons, if any, including the clerical staff, are employed by your Department, Corporation, Board or Trust?
2. What is the class of work in which they are engaged?
3. What are the rates of pay of different classes of work, including the clerical staff?
4. What is the number of working hours per week?
5. What are the Disputes, if any, that have occurred between your Department, Corporation, Board or Trust, and the persons in its employ?
6. What are the comparative efficiency and profitableness of work done under public and private management?

I beg to enclose for your further guidance copies of the papers issued by the Commission, and I have to add that it would greatly facilitate the work of the Commission if the answers to the above questions are returned as early as possible.

I am, Sir,
Your obedient Servant,
GEOFFREY DRAGE.

STATE AND MUNICIPAL EMPLOYMENT OF LABOUR.

A. CONDITIONS OF LABOUR.

1. WAGES.

(i.) STATEMENTS OF WAGES.

I. Municipal Employment.

[§ 663.] Nature and extent of information, and method of dealing with it.

663. The information contained in the returns from municipal and local authorities on the subject of wages is at once wide in extent and minute in detail. It has therefore been possible to obtain from them ample and accurate statistics. The English returns include 18 towns with a population of 100,000 and over, the figures for which are given separately in the following tables. There were, secondly, a large number of smaller corporations, and a still larger number of local boards, which have been grouped in counties. With regard to London, information was received from the London County Council and from several of the vestries. Returns were also sent from a few County Councils. For Scotland, statistics were received from the three corporations of Aberdeen, Dundee, and Glasgow; from several smaller towns, and from the County Councils of Stirling and Caithness. For Wales, the Corporation of Cardiff and various smaller corporations and local boards sent returns. In nearly every case the exact wage of every man employed by the town or county was given, together with the number employed at each rate. To obtain the average of any town, therefore, each rate of pay was multiplied by the number of men receiving that rate, and the whole divided by the total number employed. As it was possible therefore to weight the averages for each class of labour an accurate average could be obtained for the whole body. The average for each town in a county having been determined in this manner, the total average for the county was obtained from them. It was found possible in most of the large towns, and in a few of the smaller ones, to obtain separate statistics for police, roads, pavements, and sewers, gas and water works, and tables have accordingly been drawn up for each of these departments. One general table has also been prepared in which the averages for all classes of labour in every district from which returns have been received, are given in descending order.

Wages in municipal employment.

664. I.—Table showing the Means of Returns received of Weekly Wages of Police in England and Scotland, 1891–2.*

District.	Local Authority.	Wage per Week.
		s. d.
England:		
Nottingham	Corporation	32 4
Yorkshire (Wakefield and Huddersfield).	Corporations	29 3
Bolton	Corporation	29 1
Hull	„	29 0
Lancashire (Clitheroe, Burnley, Rochdale).	Corporations	28 4
Salford	Corporation	27 9
Bradford	„	27 8
Manchester	„	27 4
Rutland	County	26 9
Worcestershire (Kidderminster).	Corporation	26 6
Brighton	„	26 5
Herefordshire (Hereford).	„	25 4
Scotland:—		
Glasgow	„	28 5
Fifeshire (Dunfermline).	„	27 9

* In calculating these averages no account has been taken of the uniform, boots, &c., given in addition to wages.

The averages include inspectors, sergeants, and constables. Where the wages of each rank were given separately, but the numbers of each were not specified, the proportion given in the case of Bolton has been taken, viz., three inspectors to 15 sergeants and 93 constables.—G. D.

Summary of Results of Table II.

	s.	d.
Mean wage for England	22	11
Mean wage for Scotland	19	11
Mean wage for England and Scotland	22	5

* In the returns from Sheffield, some of the London Vestries, and some of the towns included in the counties, no information was given as to the numbers of the classes of men receiving different rates of pay. It was thus necessary to calculate the averages as though, *e.g.*, foremen and ordinary labourers were employed in equal numbers, and the averages in these cases are, therefore, probably somewhat too high. For details with regard to London *see* the following table.—G. D.

[64.] TABLE showing the MEANS of RETURNS received of WEEKLY WAGES paid by the LONDON VESTRIES to persons employed on ROADS, PAVEMENTS, and SEWERS.*

Vestry.	Wages. s.	d.
S. Saviour's, Southwark	34	1
S. Mary, Newington	32	7
Holborn	29	0
S. Giles'	29	0
S. George, Hanover Square	28	9
Chelsea	27	1
S. Mary, Islington	27	1
Rotherhithe	26	6
Bermondsey	26	5
S. Mary, Battersea	26	3
S. Leonard, Shoreditch	25	9
Bethnal Green	25	9
S. Marylebone	25	7
S. George the Martyr	25	4
Limehouse	25	3
Lewisham	25	0
S. Olave	25	0
Wandsworth	23	6
S.S. James and John, Clerkenwell	23	6
S. James, Westminster	23	0
Poplar	21	6
Average	26	5

* In the returns for S. Saviour's, Southwark, S. Mary, Newington, Holborn, S. Giles, S. George, Hanover Square, and Limehouse, no information was given with regard to the numbers of each grade employed, and the averages were thus calculated as if foremen and ordinary labourers were employed in equal numbers, and are, therefore, in these cases probably somewhat too high.—G. D.

III.—TABLE showing the MEANS of RETURNS received of WEEKLY WAGES of MEN employed by LOCAL AUTHORITIES in GASWORKS, 1891–2.

District.	Local Authority.	Wage per Week. s.	d.
ENGLAND:—			
Leicester	Corporation	35	1
Salford	,,	30	8
Warwickshire (Coventry).	,,	29	9

TABLE summarising RESULTS of TABLE III. [§ 664.]

	s.	d.
1. Mean wage for England	26	10
2. Mean wage for Scotland	25	0
3. Mean wage for England and Scotland	26	8

NOTE.—In the returns for Leicester, Salford, Coventry, Blackburn and Birmingham, and for some of the towns included in Lancashire and Staffordshire, no information was given as to the numbers of the different grades of labour employed. As these could not, therefore, be taken into account in estimating the averages, it is probable that they are in these cases somewhat too high.—G.D.

IV.—TABLE showing the MEANS of RETURNS received of WEEKLY WAGES of MEN employed by LOCAL AUTHORITIES in WATERWORKS.

District.	Local Authority.	Wage per Week. s.	d.
ENGLAND:—			
Devonshire (Torquay)	Corporation	33	6

Aberdeen	,,	20	11

SUMMARY of RESULTS of TABLE IV.

	s.	d.
1. Mean wage for England	25	2
2. Mean wage for Scotland	23	2
3. Mean wage for England and Scotland	25	0

NOTE.—In the returns from Torquay, Nottingham, Winsford, Sheffield, Manchester, and Leicester, and for some of the towns included in Lancashire and Yorkshire, no information was given as to the numbers of the men receiving different rates of pay. As, generally speaking, there are more of the lower paid than of the more highly paid classes, the averages in these cases are probably rather too high.—G. D.

(*a.*) *Police.* (*a.*) It will be seen from Table I. that returns of the wages of police have been received from 14 English corporations and from only one county, Rutland, which must therefore be taken as representing the average wages of police in country districts. The extent of the variations in England is from 32*s.* 4*d.* in Nottingham to 25*s.* 4*d.* in Hereford. It may be observed that so far as the information goes, the averages of the northern towns are, without exception, higher than those of the southern. Further, the one estimate for the rural police, though above that of the southern corporations, is below those of the towns in the northern group, to which from its geographical position it naturally belongs. The Scotch averages, though comprising only two towns, are in both cases high.

§ 664 (b.)] (b.) *Roads, pavements, and sewers.*

(b.) The wages in Table II. vary from 29*s.* 2*d.* in Sheffield to 14*s.* in Rutland. This range is somewhat reduced, however, by the facts that the averages given for the highest towns are probably too high (*see* footnote to table), and that the lowness of the wage in some districts may be accounted for by the employment of old men on the roads as an alternative to the workhouse. Generally speaking, wages are higher in the north than in the south of England, and in the large towns than in the rural districts. This last fact is particularly noticeable in Scotland, where there is a difference of 3*s.* 2*d.* between the lowest corporation and the highest local board. In the appended table giving the rates of wages paid by the London vestries it will be noticed, when the fact is taken into account that several of the averages given are too high (*see* footnote), that the variations in the rates are slight, most of the vestries averaging between 25*s.* and 27*s.*

(c.) *Gas-works.*

(c.) With regard to municipal gasworks (*see* Table III.) information has only been received from northern and midland towns; it is therefore impossible to draw any comparison between the north and south. Wages appear to be on the whole higher in the large than in the small towns; though the highest, Leicester, (35*s.* 1*d.*) and the lowest, Preston, (19*s.* 6*d.*) are both corporations of over 100,000 population.

(d.) *Water-works.*

(d.) The rates in waterworks range from 33*s.* 6*d.* in Torquay to 20*s.* in Hereford (*see* Table IV.). Here again, with the exception of Torquay, the average of which is probably too high (*see* footnote to table), the higher rates are found in the northern and midland rather than in the southern towns; but the distinction between the large and small corporations, though clearly perceptible, is hardly so marked as in the other tables. It will be seen from the summaries appended to the tables that the highest wages are earned by police, who average in England 27*s.* 11¾*d.* The average in gasworks is 26*s.* 10*d.*, and in waterworks 25*s.* 2*d.*, while that for workmen employed on roads, pavements, and sewers, sinks to 22*s.* 11*d.* The average for Scotland is lower than that for England in every instance except in the case of police, whose wages exceed the English rate by 1*d.*

SUMMARY of RESULTS of above TABLE.

	s.	d.
1. Mean wage for England	21	1½
2. Mean wage for Wales	19	5
3. Mean wage for Scotland	19	10½
4. Mean wage for England, Wales, and Scotland	20	5½

(*c.*) The above table shows the average wages paid by local authorities in various districts to all persons in their employ. This includes, besides the four departments comprised in the preceding tables, a staff of persons engaged in sanitation; in the large towns officials connected with such institutions as public parks and gardens, cemeteries, baths, and in some cases museums and art galleries. The same conclusions appear to be borne out by this table which have been noticed in the others, and it may be noted that this is also the case in the complete returns of wages in 1886 prepared for the Board of Trade by Mr. Giffen. The rates in the large towns are, generally speaking, higher than in the smaller, and with the exception of London the northern and midland towns pay higher wages than the southern. The London County Council heads the list, with its average of 28*s.* 11*d.*, and the rates paid by the London vestries are also high. Preston is, as usual, the lowest of the northern corporations; while Hull and Nottingham maintain the high places they held in the former tables, and Birmingham is raised by the high rates paid in its improvement works and museum. Such county councils as have sent returns are in every case but that of Durham below the general average for England. Bedfordshire appears to afford a good instance of the superiority of town over country rates, its corporations averaging 23*s.* 4*d.*, while its county council stands at the bottom of the list with an average wage of 13*s.* On the other hand, the evidence of Gloucestershire points to an opposite conclusion. Here the county council pays an average of 19*s.* 1*d.*, while the wages paid by the corporation of Cheltenham and by various local boards only amount to 17*s.* 2*d.* As in the case of the table for roads, pavements, and sewers, the lowness of the wage in some of the worst paid districts may be explained by the fact that it is usual to employ old and infirm men who would otherwise be paupers, and who, of course, are not worth the high rates which can be paid in other localities. The variations of wages in Wales and Scotland are considerably slighter than in England, and it is difficult to trace in them any connection with geographical situation. It appears, however, that wages tend to be higher in the central than in either the northern or southern counties of Scotland. Even Aberdeen, which as a large corporation might be expected to rank high, falls below several of the small towns of the central districts.

665. Most of the work in all departments of local employment is paid by time, and wages are variously calculated by the hour, the day, or the week. Hourly wages are the least usual, and are generally found in the different branches of the building trades. Stone-breaking appears to be almost invariably paid by the piece; instances of this mode of payment are also found in the sanitary departments of various towns. [§ 665.]

666. With regard to allowances the information given in the returns is somewhat slight. It is probable that the police are supplied with their uniform in addition to their regular wages, but it is only at Hull and Clitheroe that this is definitely stated. Their wages at Glasgow are said to include boot money, but at the other towns this point is not mentioned. In other departments, foremen and keepers of parks and baths frequently receive houses, coals, &c., and have their rates paid for them, and in some cases uniform or boots are supplied. Allowances.

667. In the case of a few corporations information was supplied as to the proportion of pay allowed during sickness. In some instances full pay, and in others half-pay, was said to be given for a limited period. The most complete data on this subject came from Preston. Here the scale is as follows:—"Under one year's employment, nil; 1–5 years, one month half-pay; five years and upwards, thirteen weeks' half-pay." This rule is stated to hold for all classes of labour except paviors and flaggers.

II. GOVERNMENT EMPLOYMENT.

668. Statistics of wages in Government employment were received from several departments, but in only three of these, *i.e.*, Dockyards, Royal Engineers and Ordnance Stores, was the information at all complete. In these cases it was given in the same form as in the returns from municipalities; and has been dealt with in the same manner. A table has been drawn up showing the average rates in the three departments in several districts, including Scotland, Ireland and the Channel Islands. The information as to the Artillery Inspection Department, Ordnance Factories, Victualling Yards, the Quarter Master General's Department, and the Army Clothing Factory, Pimlico, was too scanty to admit of detailed tables; and one general statement has therefore been prepared giving simply the average rate in each of these departments irrespective of locality. Nature and extent of information and method of dealing with it.

669. VI.—TABLE showing the MEANS of RETURNS received of WEEKLY WAGES of persons employed in the ROYAL ENGINEERS and in GOVERNMENT DOCKYARDS and ORDNANCE STORES.* Wages in Government employment.

15. Plymouth	—	19 4	—	19 4
16. Scotland	—	16 0	20 9	18 4
17. Jersey, Guernsey, and Alderney.	—	16 0	20 2	18 1
18. Ireland	—	15 8	20 4	18 0
19. North Eastern District	—	16 0	18 7	17 4
20. Western District	—	12 1	—	12 1

* In the returns from the Dockyards of Sheerness, Devonport, Portsmouth, and Chatham, and from the Royal Engineers, Home District, no information was given as to the numbers and the classes of men receiving different rates of pay. In the Ordnance Store Department at Aldershot statistics were only given for the more highly paid officials. The averages in these cases are therefore probably somewhat too high. On the other hand, the averages of the Royal Engineers in various districts are low, because in several cases old men and "pensioners" were employed, and in others men were engaged in work, such as lamp-lighting which did not occupy their whole time, and therefore received low wages.—G. D.

[§ 669.]

VII.—TABLE showing the MEANS of RETURNS received of WEEKLY WAGES in various Departments of GOVERNMENT EMPLOYMENT.

Department.	Weekly Wage.
	s. d.
1. Inspection Department, Artillery	29 1
2. Ordnance Factories (Woolwich, Birmingham, Enfield, and Waltham Abbey).	27 0
3. Victualling Yards:— Royal Victoria, Royal Clarence, Royal Alexandra, Royal William	23 3
4. Quarter Master General's Department:—(Supply Reservoir Depôt, Woolwich.)	20 2
5. Army Clothing Factory, Pimlico	17 6
Total	23 5

(a.) Royal Engineers, Dockyards and Ordnance Stores.

(*a.*) It appears from Table VI. that the widest range of wages is found in the Royal Engineers' Department, where they vary from 33*s.* 3*d.* in the home district to 12*s.* 1*d.* in the western district. The former average is, however, probably too high, and the extreme lowness of the latter may be accounted for by the employment of old men and "pensioners" (*see* footnote to Table). In consequence, perhaps, of this last fact, the total average for this department both for England (20*s.* 8*d.*), and for the United Kingdom (19*s.* 10*d.*) is the lowest of the three. That for dockyards (26*s.* 11*d.*) is considerably the highest, but it has been already stated that this is probably too high (*see* footnote, p. 463). The conclusions arrived at in the case of municipal employment as to the relative wages in the northern and southern districts of England do not hold good in this table; and the comparison of large with small towns is, of course, inapplicable. The summary appended to it shows, however, that the average for England is still higher than that for other parts of the United Kingdom.

(b.) Other departments.

(*b.*) Table VII. shows the average weekly wages in various miscellaneous departments of Government employment, which range from 29*s.* 1*d.* in the Inspection Department, to 17*s.* 6*d.* in the Army Clothing Factory, Pimlico.

Mode of payment.

670. Practically all the work in these departments of Government employment is paid by time. Daily pay appears to be the rule in the dockyards, but in the Royal Engineers and Ordnance stores both daily and weekly wages are found, and there are also a few cases of payment by the hour, occurring chiefly in the building trades. Of the five departments in Table VII., it appears that in the two highest, viz., the Inspection Department and the Ordnance factories, payment is by the week, while in the other three it is usually by the day, though there are a few instances of weekly payment.

Allowances and deductions.

671. Little reference was made to allowances in addition to wages, but in a few instances free quarters were mentioned, and in others it was stated that for special kinds of work suitable clothing and tools were supplied. On the other hand, occasional mention was made of deductions of a few pence per week for quarters. These occurred chiefly among the Royal Engineers.

[§ 67

672. The only case in which reference is made to any system of sick pay is in the dockyards, where it is stated that half pay is allowed, and special consideration shown to men injured in the execution of their work.

Sick pa

(ii.) COMPARISON OF PRIVATE WITH MUNICIPAL AND GOVERNMENT EMPLOYMENT.

I. MUNICIPAL EMPLOYMENT.

Nature and ext of infor tion, an method dealing with it.

673. In order to institute some comparison between municipal and private management in respect of wages, tables have been drawn up showing the average wages paid by local authorities in 1891, and by all classes of employers, municipal and private, in 1886. The data for the latter were obtained from the Returns of Rates of Wages prepared for the Board of Trade by Mr. Giffen, and in order to obtain similar districts for comparison it was necessary to re-group the statistics for 1891 on the lines adopted therein. The tables drawn up in this manner include roads, pavements, and sewers, gas, and water; and a further one has been prepared for various branches of the building trade, in which the rates paid by private firms and by corporations in 1891 are compared.

* Figures obtained from Board of Trade Returns of Wages for 1886, and from the Answers to the Schedules of Questions on Municipal Employment for 1891.

In some of the returns from which the averages for 1891 were obtained no information was given as to numbers of the classes of men receiving different rates of pay. The averages in these cases are, therefore, probably somewhat too high. (*See* Table II.) This is especially the case in London, Outer London, and the smaller towns of Lancashire.—G. D.

† Figures obtained from Board of Trade Returns of Wages for 1886, and from the Answers to the Schedules of Questions on Municipal Employment for 1891.

[§ 674 (a.)] (*a.*) Table VIII. gives the average wages of men employed on roads, pavements, and sewers in 1886 and 1891. In both years the average for London is the highest; and here, too, the greatest increase has taken place. With the exception of London and the neighbourhood, however, the southern districts of England were in 1886, as well as in 1891, below the northern. The rates in 1891 are in every case higher than those in 1886; and from the summary to the table it appears that this increase averages throughout Great Britain 9·8 per cent. *(a.) Roads, pavements, and sewers.*

(*b.*) Figures with regard to gasworks for 1886 and 1891 (Table IX.) could only be obtained from the northern and midland districts of England. In this industry the increase of wages is not so marked as in the preceding table, and in one case, the northern counties, there has been a decided fall. The total increase, therefore, amounts only to 3·6 per cent. *(b.) Gas works.*

(*c.*) In the rates for waterworks (Table X.) there has been a universal rise, but it is in some districts very slight. The total increase is only 6 per cent. in England and 7 per per cent. in Scotland. Compared with other trades for which statistics have been obtained for 1886 and 1891, the per-centage of increase in these three tables is very small, and it is possible that the elimination of the private employer in 1891 renders it less than it would otherwise have been. As, however, it was not possible to obtain statistics in which exactly the same classes of labour were compared at the two dates nothing definite can be arrived at as to this point. *(c.) Waterworks.*

4. Bradford - -	Carpenters, masons, and bricklayers.	31 4	31 2
5. Nottingham - -	Carpenters, bricklayers, plumbers, painters, and bricklayers' labourers.	30 0	33 0
Total - - -	- - -	32 10	31 10
	B. GASWORKS.†	33 6	26 10

* Figures obtained from the Returns from Master Builders and Trade Unions and the Answers to the Schedules of Questions for the Building Trades, and from Table III. and Summary, Group C., page 9, for gasworks.
† Of the three principal classes of workmen in gasworks—stokers, fitters, &c., and yard labourers—it appears that the wages of fitters are somewhat above, and those of yard labourers about the same amount below, those of stokers. The wages of stokers have therefore been taken in column 1 as representative of the whole trade. The lower paid classes of labour are, however, employed in larger numbers than the highly paid, and the average for private employers is therefore too high in comparison with that for corporations, where this fact has been taken into account.—G. D.

(*d.*) This table affords a more satisfactory basis for generalisation than the preceding, as it shows the wages paid by private employers and corporations respectively, to exactly the same classes of men, and at the same date and places. At Oldham, which is the highest in the list, the average for both is precisely the same. At Preston the wages of private employers are considerably higher than those paid by the corporation, and at Bolton and Bradford they exceed the corporation's rate in each case by 2*d.* At Nottingham, on the other hand, the corporation pay an average wage which is 3*s.* higher than that paid by private firms. The total average for private firms is thus only 1*s.* higher than that for corporations. *(d.) Building trades.*

II. Government Employment.

[§ 675.] Comparison of wages in private and Government dockyards.

675. The only industry in which any comparison can be drawn between Government and private employment in respect of wages is dock labour. Omitting those docks in which the rates given are probably too high (Table VI. and footnote), it appears that the averages in Government dockyards at Pembroke and Deptford are respectively 24*s.* 6*d.* and 20*s.* 3*d.* The wages in the private docks of London are stated to average 27*s.* 6*d.*; at Southampton, on the other hand, they are only 21*s.*[1] This was, however, stated, to be one of the worst paid ports in the kingdom. It would appear, therefore, that wages are somewhat higher in private than in Government docks.

2. HOURS.

(i.) STATEMENTS OF HOURS.

I. Municipal Employment.

Nature and extent of information, and method of dealing with it.

676. The information on the subject of hours was of much the same character as that with regard to wages, though slightly less extensive, as a few municipalities which sent returns of wages supplied no information as to hours. It has been dealt with in the same manner. The average for each town has been accurately determined by multiplying the number of men working any number of hours per week by that number, and dividing the sum by the total number employed. The towns with a population of 100,000 or over are given separately in the tables, and those with a smaller population have been grouped in counties. As with wages, separate tables have been drawn up to show the hours worked under local management, by police, on roads, pavements, and sewers, in gasworks and in waterworks. A general table is also given, showing the average hours of all persons employed by municipalities.

[§ 677.] It appears from these tables that the high wages which have been noticed in the northern counties of England as compared with the southern are by no means generally accompanied by any increase of hours. The reverse seems, in fact, to be more often the case, and hours are, generally speaking, longer in the southern districts, though the variations of hours appear to be connected much less closely with geographical situation than was the case with wages.

(*a.*) The hours of police, of which, however, only a few instances could be obtained, vary from 52 in Salford to 63 in Rutland, or, if Scotland is included, to 70 in Fifeshire. The one county council from which returns have been received—Rutland—is at the bottom of the English list, but its hours are only equal to those of Glasgow, which represents the corporations of Scotland. The total average for England (57) is thus considerably less than that for Scotland (66½). (*a.*) *Police.*

(*b.*) The table for roads, pavements, and sewers includes a much larger number of municipalities. The hours are, on the whole, shorter; the range of variations, though of the same extent, is from 49½ in Bradford to 60 in Rutland. The bulk of the towns, too, show an average of from 52 to 55 hours per week, and the total average for England is thus only 54. The variations in Scotland are comparatively very slight. The shortest hours are worked in Forfarshire, which averages 55½, and the longest in Dundee (average 59¾). The total average for Scotland is 57½ hours. The appended table shows the hours worked in the London vestries, and gives an average of 55¼. (*b.*) *Roads, pavements, and sewers.*

(*c.*) In gasworks the average for England rises to 55⅓; the wide range in the number of hours (from 49½ to 62) may be accounted for by the fact that though certain towns have adopted an eight hours' shift, in those districts where it has not been introduced the hours are generally longer than in other industries. Only one Scotch corporation—Aberdeen—sent returns of hours in gasworks, and its average (53½) is less by two hours than that for England generally. (*c.*) *Gas-works.*

(*d.*) The same phenomenon is observable in waterworks, where Scotland is represented by three towns. Hours in this industry range in England from 49⅓ in Bradford to 60 in Nottingham and Herefordshire. This average for Nottingham is somewhat remarkable, as in the other tables it has appeared high in the list, and has never averaged more than 56. (*d.*) *Water-works.*

SUMMARY of RESULTS of above TABLE.

1. Mean number for England	55¾
2. Mean number for Wales	57¾
3. Mean number for Scotland	57
4. Mean number for Great Britain	56¼

(*e.*) This table, showing the average hours worked per week by all persons in the employ of local authorities, presents several points of contrast with the corresponding table of wages. It is true that, with a few exceptions, the towns down to a certain point are all included in the northern districts; but below this point no connection between geographical situation and hours of work can be detected. Cornwall and Norfolk, *e.g.*, are above Hull and Cheshire. Further, the superiority of large over small towns, which was so pronounced in the case of wages, hardly exists with regard to hours. In only one large corporation — Sheffield — are shorter hours worked than in the small towns of Yorkshire, and the difference here is only 20 minutes. Brighton appears nearly at the bottom of the list. In Leicester and in the small towns of Leicestershire the hours worked per week are precisely the same; and, finally, under the Durham County Council they are only 53, *i.e.*, only 15 minutes per week more than in the corporation of the same name. London, it will be observed, appears twice in the list. The County Council is second only to Sheffield, but the vestries work an average of 55¾ hours per week. The summary appended to the table shows that this number (55¾) is also the average for the whole of England. That for Great Britain amounts to 56¼, being raised by the rates for Wales and Scotland—57¾ and 57.

(*e.*) *Municipal employment generally.*

678. With regard to payment for overtime, very little information was given. As, however, it was occasionally stated that "foremen were not paid for overtime," it is possible that in some cases payment is to be assumed where nothing to the contrary is asserted. In some of the returns it simply appears that "overtime is paid," or that "extra pay for night work" is allowed; in others the amount of pay is given. This is in many towns merely the same rate; in others it varies from time and a quarter to time and a half. Where payment for Sunday labour is mentioned, it is in all cases time and a half, except at Reading, where it is paid at double rate.

Overtime and Sunday labour.

679. Holidays were scarcely mentioned in the returns. Where any reference was made to them it was only to state that the general holidays were allowed. The ordinary pay appears to be given on these days, except at Preston, where only half pay is allowed.

Holidays.

II. GOVERNMENT EMPLOYMENT.

680. The information on the subject of hours under Government employment comprised the same departments as those dealt with under the heading of wages. Tables similar to those for wages have been drawn up,

Nature and extent of information, and method of dealing with it.

but as the average in dockyards was the same in each yard, it has been thought sufficient to give only one general average for this department in the second table. Table XVII. includes, therefore, instead of three, only two departments, viz., the Royal Engineers and Ordnance Stores.

681. XVII.—Table showing the Means of Returns received of Number of Hours worked per Week by Persons employed by Government in the Royal Engineers and in Ordnance Stores.

District.	Royal Engineers.	Ordnance Stores.	Average.

7. Quarter Master General's Department (Supply Reservoir Depôt, Woolwich).	54
8. Royal Engineers*	54½
Total	52½

* *See* Table XVII.

[§ 681(a.)] (a.) *Royal Engineers and Ordnance Stores.*

(a.) Table XVII. shows the average hours worked per week in the Royal Engineers in 17 districts of the United Kingdom, and in 14 districts in Ordnance Stores. The hours in the latter are decidedly shorter than in the former, the variations extending from 45 at Aldershot to 54¾ in the eastern district, with an average of 51½; while in the Royal Engineers they range from 50 in the western district to 62 in the north-western, with an average of 54½. The total average for the United Kingdom is 53 hours.

(b.) *Other departments.*

(b.) In Table XVIII. the range is very slight. The shortest hours worked are 51, and the highest 54½, or, excluding the Royal Engineers, 54. The average is 52½.

(ii.) COMPARISON OF PRIVATE WITH MUNICIPAL AND GOVERNMENT EMPLOYMENT.

Nature and extent of information.

682. Tables similar to those given under the heading "Wages," comparing the rates paid by local authorities and by private employers on roads, pavements, and sewers, and in gas and water works, could not be obtained for hours, as no data were available corresponding to the Board of Trade returns of wages in 1886. This difficulty does not, however, exist in the case of the building trades; and in order that some comparison may be made between private employers and local authorities with regard to hours, the following table has been drawn up in the same manner as Table XI. under the heading "Wages."

683. XIX.—Table showing the Means of Returns received of Number of Hours worked per Week by Persons employed by Private Firms and by Corporations in the Building Trades, 1891–2.

Town.	Class of Labour.	Hours worked per Week.	
		Employer.	Corporation.
1. Bolton	Carpenters, masons, bricklayers, and painters.	47½	51½
2. Bradford	Carpenters, masons, and bricklayers.	48	49½
3. Preston	Carpenters and plumbers.	48½	54½
4. Nottingham	Carpenters, bricklayers, plumbers, painters, and bricklayers' labourers.	49	53
5. Oldham	Carpenters, masons, and bricklayers.	51	49½
Total		49	51½

General conclusions with regard to private and municipal management.

So far as this table goes, it appears that the relation between wages and hours under private employers and corporations respectively tends to differ considerably. Whereas under private employers the tendency appears to be that short hours and low wages or long hours and high wages should go together, under corporations the reverse is the case. At Oldham, for instance, where the highest wages are paid (*see* Table XI.—Wages) the hours under the corporation are only 49½. At Preston, on the other hand, where wages are considerably lower than in the other towns, they amount to 54½. Only five towns, however, altogether are included in the table, and it is, of course, unsafe to generalise from so slight a basis. The range of variations under private employers is from 47½ at Bolton to 51 at Oldham; under corporations from 49½ at Oldham and Bradford to 54½ at Preston. The corresponding averages are 49 and 51.

(iii.) EIGHT HOURS' DAY.

Municipal employment.

684. It appears from the returns that there is but little experience under municipal management of the system of eight hours work a day. The experiment

[§ 684.] where it has been tried occurs almost exclusively in the comparatively large towns. Most of the cases where it is found are corporations with a population of 100,000 or over; and the rest, though not falling under this category, are towns of a considerable size, such as Halifax and Darwen. Among the small corporations and local boards no definite mention of the system is made, though the hours in some cases are short enough to make it probable that it has been practically adopted. With very few exceptions the eight hours' system (where it has been introduced at all) occurs only in the gasworks of the various corporations. This is the case in Birmingham, Salford, Leicester, Manchester, Nottingham, and other towns. It is found in a few waterworks, and in miscellaneous departments of some corporations. Generally speaking, it has, as at Manchester, been introdued in consequence of a petition from the men. Very few of the returns give any information as to the results of the introduction of the system, but it is probably to be assumed that it has been successful where nothing is stated to the contrary. At Middleton, however, although in ecember 1889, the gas stokers, among other things, requested and obtained the establishment of an eight hours' shift, by April 1890, they asked to revert to the old system. At Middlesbrough the gas manager states that the men do more relative work under the eight hours' system than when working twelve hours a day, but that in consequence of the decrease in absolute returns, it costs 12 per cent. more. At Newcastle, on the other hand, there is a conspicuous instance of the successful introduction of the system. For five years, it is stated, the Corporation has destroyed part of the town refuse by fire. The operation is carried on in furnaces requiring pretty constant attention. For 3½ years the men worked alternate shifts of 12 hours each; but in the winter of 1889, a new arrangement was made on the request of the men, of three shifts of eight hours. The result was, that "with identically the same furnaces, "the amount burnt was so largely increased that the "cost per ton was slightly reduced."

[§ 6

685. An eight hours' day appears to have been adopted in some cases in the various departments of Government employment, but beyond the mere statement of hours no information was given.

In Gov ernme employ ment.

686. A memorandum has been handed in to the Commission enumerating certain advantages enjoyed by the men employed in Government Dockyards. It appears that a pension on retirement is granted to the "established" men, and those on the "hired" list receive gratuities on discharge. The work is regular, and is carried on for the most part under favourable conditions. When this is not the case extra pay is given. Various medical and educational advantages are enjoyed; rooms have been fitted up for the men's use, and canteens exist in certain yards at which tea, coffee, &c., can be purchased.

Other condit of labo Gover dockya

B. GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED.

I. Municipal Employment.

General relations.

687. Nearly every town from which returns have been received has supplied some information as to the relations existing between employers and employed. It appears from the data thus available that these relations are particularly good. It must, however, be borne in mind that the returns express the opinions of only one side, the employers', and are, therefore, liable to be biassed. A large number of corporations answer simply, "None" to the question in the Schedules as to the disputes that have occurred. Some, however, give more explicit evidence of the friendly feeling said to exist. Thus in one department at Birmingham "general satisfaction" is said to be felt; and at Burton-on-Trent it is asserted that no dispute has ever occurred, the men having always been dealt with fairly. This is also the case at Grimsby, while at Dundee "the work-"men take no part in trade disputes, their wages being "for the most part regulated by the rates paid by local "contractors." It may be noted that at Barnsley, when the masons employed by private firms struck, those employed by the Corporation continued work on the understanding that they abode by the results of the strike.

So-called "disputes." Applications for increased wages, &c.

688. The signification given to the word "disputes" in the returns is so wide that it is necessary to make some sort of classification. Under this term are included not only strikes, or even such disputes as might lead to strikes, but dealings between employers and employed, such as applications for increased pay or shorter hours, however well received, or whatever their results. The greater number of the so-called disputes fall under this head. Such applications have been made at Glossop, Stalybridge, Mossley, Bath, Ripon, and several smaller towns. In the majority of cases the demands made have been granted, whether under protest or not; but at Sutton Coldfield and Lyme Regis there have been instances of refusal, which were not, however, followed by strikes. "Any question," writes the town clerk of Dundee, "that has arisen as to wages, "hours of labour, times of payment, &c., has been in-"variably settled by an amicable arrangement ac-"quiesced in by both employers and employed." This conciliatory spirit appears, indeed, to be very widespread. Thus, at Newcastle, the usual method of procedure is described as follows:—"In case of grievance or desire "for rise of wages they (the men) are expected to bring "their case before the city engineer, who either deals "with it at once, after the needful inquiries, or lays it "before the committee in whose charge the special "matter happens to be. They deal carefully with the "facts laid before them, and if the decision is to accede "to the wishes of the men, that ends the matter: if the "decision is adverse, then the men are called before "the Committee, and state their own case either per-"sonally or through their Union secretaries. This "mode has been found to work smoothly." The London County Council states that "it cannot be said that any "disputes have occurred between the Council and the "persons in its employment. Representations have "from time to time been made by various classes of "servants, and these have all been carefully considered, "and modifications have been made in the hours and "conditions of work."

Strikes

689. Serious disputes have, however, taken place in a few towns, but the accounts are in most cases so fragmentary that it is impossible to glean from them more than the causes and general results. It is noticeable that nearly all the important strikes occurred in the gas departments of the different towns. The causes are various, but the most usual are demands for higher wages and shorter hours, and questions connected with Trade Unionism.

(a.) In Gasw

(a.) A serious dispute at Manchester arose from certain demands on the part of the men for better conditions, and was immediately caused by a refusal to work with non-unionists. The other demands were conceded by the Corporation, but on this point they would not yield. In consequence, the Stokers' Union ordered the men in the Salford Corporation Gasworks to come out; and, as no compromise could be effected, men were eventually obtained from a distance to carry on the work. The formation of the Gasworkers' and General Labourers' Union was alleged to have led to a strike at Coventry on a question of wages and hours, in which the men had no real grievance. As soon as the true state of things was understood they willingly came back, expressing satisfaction with the treatment they received from the department. At Darwen, on the other hand, the men demanded certain alterations in wages and hours, and, though the Mayor offered the conditions prevalent at either Bolton or Blackburn, they refused so persistently that new men were imported by the Corporation. Disputes on the same subjects at Oldham and Mossley were won by the men.

(b.) In other Depart ments.

(b.) The few strikes that have occurred in other departments arose in every case on some question of the conditions of labour. The results were various. In some cases the Corporation gave in; in others they forced the men to yield.

II. Government Employment.

Genera relation

690. No actual disputes are recorded under Government employment, but applications for increase of pay, &c., have occurred in almost every department. These appear to have been generally conceded.

C. COMPARISON OF PRIVATE WITH MUNICIPAL AND GOVERNMENT EMPLOYMENT AS TO EFFICIENCY AND COST.

I. Municipal Employment.

691. A considerable number of the returns, among which is that of the London County Council, merely state in answer to the question as to the comparative merits of municipal and private management, that they are unable to judge, not having the necessary data on which to form an opinion. Others, again, simply offer an opinion that public management is more efficient, but say nothing as the comparative cost of the two systems. By far the larger number of the returns, however, consider that municipal management is superior, both as to efficiency and cost, to private control. The Chichester clerk goes so far as to state that "the maximum of efficiency and profitableness is "obtained when work is done by those in the employ "of the corporation; the reverse when done by "contract." In many cases this opinion is given without any information as to the grounds on which it is based. Arguments are, however, brought forward in support of it by a few corporations. Thus the Birmingham town clerk writes that "profitableness is "increased by being able to borrow money on the "public rates for the purpose of new works at less "interest than people care to invest on share capital." In the return from West Hartlepool it is argued that "there is no sub-contracting and, consequently, no "scamped work in order to bring in the two profits." The work also, it is said, costs infinitely less in repairs. This view is upheld by several corporations. Others again argue that the responsibility of municipal bodies to the ratepayers and the strict audit of accounts ensure work being done better and at less cost under public management; while in one case the same result is attributed to the fact that "public management often "looks to the future, while private management some-"times ignores the future and looks only for present "returns." Instances in which work under public management has actually been carried out with greater efficiency and at less cost are also occasionally adduced. Thus, at Howden, it is stated that "the scavenging "which was until last June done by a contractor, was "not well done, the result being that this Board have "employed a man to work, under the superintendence of "the surveyor, with advantage in the execution of the "work and a saving of about 25*l.* per annum in the "cost"; and the Fleetwood town clerk quotes the case of a private contractor refusing to tender for a new highway "owing to the commissioners being able to do "the work with greater efficiency and at less cost." It is, of course, possible that the opinions given in the returns are biassed by the position of the clerks. The town clerk of Croydon, indeed, while declaring himself in favour of municipal management, adds that "contractors probably hold a different opinion." In a large number of cases the view is held that public work, though more efficient, is considerably more costly and often slower. In some, this is ascribed to the deliberate adoption of a policy of philanthropy. In the Chelsea Vestry, *e.g.*, there is a "tacit under-"standing that employment shall be given to the "parishioners first, and not necessarily to the fittest "and best men," while at Lyme Regis and Bethnal Green old men are employed who would otherwise have to go the workhouse; and the work is therefore done more slowly than would be the case under a contractor. Even where the cost of municipal undertakings is accounted for by no such reason, certain considerations are urged which may be set against the increased expense. That it is compensated, or more than compensated for, by the increased efficiency is contended in several of the returns. The town clerk of Abersychan uses a similar argument when he writes that "when "work is done by contract on the score of cheapness, "it is generally at the cost of efficiency, unless very "rigid supervision is exercised; the cost of such "supervision frequently being equal to if not in excess "of the difference in cost of the two methods." Others again urge that "profit is not considered," the object of municipal work being not profit making but the general good of the public. It is therefore contended that though no pecuniary gain is made, a benefit accrues to the community in the form of reduced rates, gas, &c., at cost price, which is of greater value.

[§ 692.] Neutral opinions.

692. Another opinion frequently met with in the returns is that there is no difference as to efficiency and cost between public and private management. Some consider that the question depends on the respective ability of the managers or the men employed; and others that it varies according to the kind of work. For the current work of a town it is generally held that public management is superior; for the erection of buildings and other large works where wide experience and extensive plant are necessary the contract system is to be preferred.

Opinions in favour of private management.

693. Of the few clerks who record an opinion in favour of private rather than public management, it is noticeable that nearly all bring forward arguments in support of their view. By some the absence of the element of self-interest is mentioned as a serious drawback to the success of work done under municipal control. "A private firm," writes the clerk of Oswaldtwistle, "is obliged to adopt measures to secure "efficiency and a profit, while there is no such existing "motive in a board or corporation, at least not "necessarily." Others argue that the members of a corporation do not possess the varied experience of a contractor, while a large number of small towns complain of the want of special plant. It is further contended that outside influences operate harmfully against the work of a public body; each member of a board or corporation being entirely dependent on outside support for the position he holds.

Various suggestions with regard to municipal employment.

694. A few suggestions made in the returns for the better conduct of municipal enterprises may conveniently be appended here. The town clerk of Kirkheaton complains of the difficulty experienced in rural districts in obtaining a sufficient number of able men to form a board, and adds that the result is that such places are "kept back and not encouraged to "advance with the times." He advises, therefore, that all small districts should be amalgamated and worked by district councils. Complaint is made by two clerks that the officers are so much at the mercy of the local authorities as to be afraid to discharge their duties honestly. One, therefore, suggests a right of appeal to a larger area; the other considers that officers should not be removable except for misconduct or incompetency; and recommends a right of appeal to the Local Government Board. He further advises the granting of a pension to incapacitated officers which would have the effect of removing one incentive to dishonesty.

II. Government Employment.

Opinions with regard to private and Government management.

695. The returns of Government employment state in several instances that no data exist for drawing a comparison with private management; or sometimes that the question is inapplicable, as the work done is of a kind not carried on in the general trade. The answers, however, that have been received are practically unanimous. In the return from the Chatham Dockyard it is stated that work done by contractors is equal in efficiency to that done in the yard; but all the others agree that Government work is more efficient than that done under private management, though it is often more costly. In two instances a reason is brought forward for this conclusion. In the return from the Inspection Department, Woolwich, the increased efficiency is ascribed to the facts that Government shops are not subject to competition for low prices or bent upon making a profit, and that, therefore, more care and better material can be used in the manufacture of any article. Hence, though dearer at first, it is more durable, and therefore more profitable in the long run. In the Ordnance Stores Department, at Portsmouth, it is asserted that the men employed "are from their training, after having served "some time in the Department, specially qualified for "carrying out the work required." Their work is therefore said to be more efficient and profitable than that done for the Department by contract.

Geoffrey Drage,
Secretary.

APPENDIX III.

SUMMARY UPON THE EMPLOYMENT OF WOMEN.

	Page
A. CONDITIONS OF LABOUR	476
1. Wages	476
2. Hours	504
3. The Employment of Married Women	507
4. Sanitation and Health	510
5. Inspection and Legislation relating thereto	528
6. Other Conditions of Labour	535
B. ORGANISATIONS	539
C. TRADE DISPUTES	546

NOTE.

In accordance with a Resolution of the Commission, the Secretary was directed to prepare a Summary of the Evidence (oral and written) received by the Commission on the subject of the Employment of Women. This Evidence includes:—

A. INFORMATION RECEIVED BY THE COMMISSION.

1. The Seventeen Reports drawn up by the four Lady Assistant Commissioners.
2. The Evidence given before the three Committees of the Commission, and also before the Commission Sitting as a Whole.
3. The Answers to the Schedules of Questions.
4. The Rules of Associations of Employers and of Employed.
5. Summaries of Evidence given before the Commission.
6. Certain other Documents handed in or forwarded to the Commission, but not printed with the above
7. Further Correspondence on certain subjects.

B. INFORMATION OBTAINED FROM OFFICIAL SOURCES.

8. Reports of the Chief Inspectors of Factories and Workshops for 1891 and 1892.
9. Returns of Wages published between 1830 and 1886 issued by the Board of Trade.
10. Statistical Tables and Report on Trade Unions. Fifth Report, 1891.
11. Report on Strikes and Lock-outs issued by the Board of Trade for 1889, 1890, and 1891.
12. Reports of the Select Committee of the House of Lords on the Sweating System.

C. INFORMATION OBTAINED FROM GENERAL SOURCES.

13. Certain Non-official Publications bearing on the subject, including Reviews, Pamphlets, Reports of Women's Associations, &c.

An attempt has been made to group together all the information received under certain specific heads following in main outline those adopted in the summaries of the evidence taken before the Commission. At the same time the instructions of the Lady Assistant Commissioners have been carefully borne in mind, and the information has been arranged in such a way as to bring out clearly, (i) the difference in the rate of wages of men and women, (ii) the alleged grievances of women, (iii) the effects of women's industrial employment on their health, morality, and the home. Further sections have been added with regard to trade disputes and trade organisations.

It has been found impossible to deal with the information collected by the Lady Assistant Commissioners on precisely the same lines as those adopted in the other summaries, owing to the different nature of the information. The witnesses examined before the Committees of the Commission, the majority of whom were employers or trade union officials, showed a knowledge of the trade not only in their own locality but also in the whole area embraced by the union, as well as some acquaintance with the conditions of labour as a whole. The evidence given before the Commission sitting as a whole bore in a still greater degree on general questions connected with labour. It was therefore usually possible to give from the evidence itself any generalisation or conclusions arrived at. On the other hand, the information collected by the four Lady Assistant Commissioners referred for the most part to special districts, and hence consisted more often of a great number of particular facts relating to the employment of women in certain localities. While in some cases generalisations were made and conclusions were drawn with reference to the conditions of work in certain special districts or in certain parts of an industry, there were very few on the general questions connected with the employment of women as a whole. Hence in an attempt to group and arrange all the facts, with a view to bringing out the more salient points in connection with the subject, it has in some cases been found impossible to avoid a certain amount of generalisation and deduction from the facts given. This is especially true in the section on Wages.

TABLE OF CONTENTS.

A. CONDITIONS OF LABOUR.

Page

1. WAGES - - 476–504

GENERAL QUESTION OF LOWNESS OF WOMEN'S WAGES - - 476–7

696. The Wages of Women - 476–7

DIFFERENCE IN RATES OF WAGES OF MEN AND WOMEN - - 477–9

697. Difference in Wages and Rates of Wages arising from— - - 478–9
(a.) Difference in kind of work - - 478
(b.) Different standard by which women's wages are estimated - - 478–9

COMPETITION BETWEEN MEN AND WOMEN - - - - 479–82

698. Nature and Extent of Competition - 479

699. Objections of the Men - - - 479–80
That they are thrown out of employment 479
That their wages are reduced - - 479
(a.) The Yorkshire Textile Industries 479
(b.) Tailoring Trade - - 479–80
(c.) Miscellaneous Trades - - 480

700. Attitude of the Men - - - 480
Oppose female labour altogether - 480
Or try and raise the rate of women's wages to their own - - - 480

701. Possible Effect of an Equal Rate of Wages upon the Employment of Women - - - - - 480–1
Question of superiority of men's labour - 480–1

702. Effect of Competition of Men and Women in the same Employment upon their respective Wages - - 481–2

GENERAL CONCLUSIONS WITH REGARD TO WOMEN'S WAGES 482–3

703. Question of the Standard by which Women's Wages are estimated - 482–3

WAGES IN HOME INDUSTRIES AND "SWEATED TRADES" - - 483–4

704. Very low Wages obtained in Domestic Industries - - 483

705. Effect of this upon Rates of Wages in Factories and Workshops - - 483–4

GRIEVANCES CONNECTED WITH THE CALCULATION OF WAGES AND THE METHOD OF PAYMENT - 484–6

706. Fines - - - - - 484–5
(a.) Disciplinary - - - 484–5
(b.) Fines for damages - - - 485

707. Deductions - - - - 485–6
For extra service - - - 485–6
For materials - - - 486

708. Truck System - - - - 486

709. Bounty System - - - - 486

STATISTICS OF WOMEN'S WAGES ON WHICH ABOVE PARAGRAPHS ARE FOUNDED - - - 487–504

710. Tables of Wages in the Textile Trades - - - - 487–91
(a.) Table of Wages of Women in the Cotton Industry, 1891–2 arranged in descending order - - 487
(b.) Table of Wages earned by Women in the Woollen Industry, 1891–2 arranged in descending order - 488–9
(c.) Table of Wages earned by Women in Miscellaneous Textile Industries, 1891–2 arranged in descending order - - - 489–91

EMPLOYMENT OF WOMEN.

[In all cases of foot-notes to the text where reference is made to pages only, the Reports of the four Lady Assistant Commissioners are referred to. Where reference is made to other sources of information the title of the volume or document is quoted.—G. D.]

A. CONDITIONS OF LABOUR.

1. WAGES.

[§ 696.]

GENERAL QUESTION OF LOWNESS OF WOMEN'S WAGES.

Wages of women.

696. The following tables show the means of the returns of wages earned by women and girls in different industries and in different districts, collected by the Lady Assistant Commissioners. These means are in some cases probably not far from true averages, but in other cases they diverge. In the summarised tables (I.–VII.), the wage estimate is the arithmetic mean of the wages given in the detailed tables. The nature of the return in the latter tables and the method by which the means were determined is in each case indicated in the Remarks.

I. TABLE showing AVERAGE RATES of WOMEN'S and GIRLS' WAGES in FACTORIES and WORKSHOPS in various industries, 1891–2.*

(Arranged in descending order.)

Industry.	Arithmetic Mean of Mean Wages per Week collected.		Reference.
	s.	*d.*	
Shop Assistants (1) -	18	0	Paragraph 712.
Printing (including map-printing) (2).	16	0	„ 713.

Sack-making, rope-making, and rag-picking.	7	1	„ 716.
Straw plaiting - -	4	6	„ 711 (*c.*).
Mean of above estimates -	11	5	Detailed tables, paragraphs 710–718.

* Further details and explanations regarding all the wages mentioned in this table are found in the detailed tables (paragraphs 710 to 718), to which references are given in each case. For the relation between women's wages in these and in the so-called "sweated industries" (*i.e.*, those examined before the House of Lords Committee) *see* paragraph 718, and in particular footnote (1) appended to page 477.

(1.) It must be remembered that whenever board and lodging was wholly or partially provided, as in the case of shop assistants, barmaids, waitresses, &c., or whenever any "allowances" were made, such as beer to laundresses, the monetary value has been taken into account as far as possible in estimating the average wage.

(2.) The high average obtained in the printing trade is explained by the fact that the wages of apprentices or learners have not been taken into account, and thus the wages of comparatively skilled labour only are given.

(3.) The statistics from which the average wage for straw hat-making were obtained were furnished by factories in which apparently the best class of hat was made.

(4.) The wages given for shirt and collar manufacture refer only to the non-sweated part of the industry.

(5.) Miscellaneous trades include upholstery, unloading boats, soap manufacture, box-making, dock, wharf, and riverside labour, tobacco manufacture, saddlery and harness manufacture, pipe factories and potteries, and cocoanut-fibre mat-makers.

II. TABLE showing the FLUCTUATIONS of MEANS of RETURNS collected in DIFFERENT DISTRICTS.*

District.	Arithmetic Mean of Mean Wages per Week collected.	
	s.	*d.*
1. Lancashire and Cheshire - -	15	3

20. Birmingham - - -	10	5
21. Midlands - - - -	10	1
22. Liverpool and Birkenhead - -	9	9
23. Ireland - - - -	9	5

*Estimates obtained from the detailed tables (paragraphs 710–718). It has been found impossible to attempt any adequate explanation of the fluctuations of wages in various districts because very little information on the subject is given in the reports of the Lady Sub-Commissioners. That some of the chief centres of the principal branches of the textile industry come at or near the head of the list is not surprising, since that industry is in many places better paid and better organised than most others in which women are engaged, and it employs, moreover, a larger number of persons than perhaps any other. It appears probable that the low wages of such towns as Bristol and Liverpool is accounted for by the fact that they are ports with a vast miscellaneous population, in which there is a demand for all sorts of unskilled as well as skilled labour, and in which there is a large amount of home-work. The very large number of women workers, both married and unmarried, in Birmingham, and the practically unskilled character of the mechanical work on which they are employed in the factories, may also account for the low wages in that town. It is stated that the very low wages paid in many industries to women in Wales are attributed by most of those who offered opinions on the subject to the small choice of employment. The supply of labour greatly exceeds the demand. A number of country hands, the daughters of farmers, slate quarrymen, and miners, compete for employment with the daughters of tradesmen and mechanics in the town. "Any new opening . . . . . in a factory is stormed with applicants, and the managers can really fix the wages with almost arbitrary power. It is only when some skill is required, and the hands have become trained, that a rise in wages has been obtained." p. 242.

[§ 696.] It appears from the above that the mean of the estimated wages earned by women and girls in all industries from which information has been received is 11*s.* 5*d.* This is strikingly corroborated by the returns of wages paid to women and girls in the 23 chief industries in which they are employed, handed in to the Commission by Mr. Giffen. According to these statistics, 151,263 women earn an average wage of 12*s.* 8*d.*, 48,772 girls an average of 7*s.*; together earning an average wage of 11*s.* 3½*d.* It is, however, a significant fact that the mean of the returns of wages in the so-called "sweated" trades, which was obtained from details given in the evidence before the House of Lords' Committee on the Sweating System, was estimated at 12*s.*(1) The conclusion, therefore, appears to be, not that the wages paid in so-called "sweated" trades are high, but that in the majority of cases women's wages are low. A glance at the first of the above tables shows that in only 15 out of all the trades in which women are employed, and concerning which evidence has been obtained, does the mean of the returns collected rise above 11*s.* 5*d.*; in the very great majority of trades, therefore, women do not even receive so low a wage as is represented by the mean in all industries. Nor must it be forgotten that in 13 out of those 15 trades (2) in which the estimate is over—in some cases considerably over—11*s.* 5*d.*, the mean of the wages of women workers in certain places or in certain lower branches of the trade do not amount to that sum. In the remaining industries (those in which the mean is below 11*s.* 5*d.*) the wages of many sections of workers are exceedingly low. This can be seen by the detailed tables appended to the end of the wages section of the mean of the returns collected from the several departments of the various industries in different districts. Thus even in the textile trade the mean for woollen spinners is 7*s.* 6*d.* per week in Leeds, and 6*s.* in Ireland, and for workers in a worsted factory at Ayr only 5*s.* 10*d.* For spike nail makers in Worcestershire the mean amounted to 4*s.* 6*d.*, and for those engaged in rope teazing and sack sewing in London and Scotland it ranged from 4*s.* 9*d.* to 3*s.* In straw-plaiting at Luton the weekly earnings were estimated at 4*s.* 6*d.*, and the hourly earnings at ¾*d.*; while in "sprigging" embroidery at Donegal the wages of "hundreds of people" were stated to range from 2*d.* to 9*d.* a day, and the weekly wage to average 2*s.* 9*d.*(3) Such means of the returns collected are, of course, only of the nature of rough estimates but, as such, they yield a striking conclusion. Further illustrations were contained in the Lady Sub-Commissioners' accounts of visits to or interviews with individual workers, and in the evidence given before the House of Lords' Committee on the Sweating System. Thus a woman in the hosiery trade receives 3*d.* for "turning off and seaming feet of a dozen pairs of stockings. She can make 10 dozen in one week, which is equivalent to 2*s.* 6*d.*" Another woman seams men's socks for eight to nine hours daily at 4½*d.* per dozen. Her average earnings are 2¼*d.* per day or 1*s.* 1½*d.* per week. In the lace trade a woman was found beading frilling at 2½*d.*–3½*d.* per dozen yards. She could bead 3½ yards in an hour, and by "neglecting her home" she could earn 3*s.* a week.(4) [§ 696.]

*Total in all industries from which information has been obtained	11 5	—	—
Average wages in certain selected occupations, as estimated by Mr. Giffen (8)	(Women) 12 8 (Girls) 7 0	24 7	Average rate of men's wages 94 per cent. above average rate of women's wages (excluding domestic servants).

* The wages of men in the specific industries referred to in this table were in every instance but one determined from the summaries, and the sources of information were, therefore, more easily accessible than in the case of the wages of women. The method adopted was in all respects similar to that employed with regard to women's wages, and in the case of shop assistants the information was derived from the same source. The labour involved in drawing up the table would have been enormously increased by giving a *detailed* explanation of the method followed in determining the means, and in view of these facts it has not been thought necessary to do so. Moreover, this explanation has been already given, to some extent, in the detailed tables in the summaries themselves.

† This figure refers only to a special class of workers.

(1) This average was determined by a process exactly similar to that already adopted in the detailed table given in paragraph 17. Board, lodging, and premiums have been included wherever possible.

(2) The estimate given in the table is the arithmetic mean of the results given in the summaries.

(3) The average given by the Boot Manufacturers' Association for Leeds (taking the mean of the wages of riveters, clickers, and finishers) is 27*s.* 4*d.*, and that given by the Boot and Shoe Operatives is 22*s.* 6*d.* The mean between these results (*i.e.*, 24*s.* 11*d.*) was added to the average for Leicester and Aberdeen (given by the operatives) and divided by three to obtain the above.

(4) Seven statements were given in which wages were said to vary between certain specified limits. The arithmetic mean was taken in each case and finally the mean taken of the whole.

(5) Mr. Southwell stated that wages ranged from 32*s.* to 35*s.* The arithmetic mean was taken and the mean then taken between this result and the average given by the Aberdeen Carpet Weavers' Association.

(6) The number of hours worked on an average in Scotland (Section 341) is 58¾, and the mean rate of payment per hour 5*d.*, *i.e.*, a mean weekly wage of 24*s.* 4*d.* The hourly rate in England, Wales, and Ireland is also 5*d.* The mean wage in Scotland has, therefore, been taken as typical of the whole.

(7) It is not quite clear whether this represents the wage of men alone or men and boys together. If the former, then the wage would be lower in 1891 than in 1886 (*see* Table IV.). The latter has, therefore, been assumed to be the case.

(8) See Tables of Wages handed in by Mr. Giffen. The average applies to 38 selected occupations, but they may be taken, according to Mr. Giffen's evidence, as representative of industries as a whole. The average refers to the year 1885, which was one of depressed trade, but these rates do not differ very materially from those paid at the present time. (*See* Mr. Giffen's evidence before the Commission Sitting as a Whole.)

(1) The table of women's wages on p. 502 was obtained from the details given in the evidence before the Committee of the House of Lords appointed to investigate the "sweating system." With few exceptions the returns of wages in the various industries are as high, or higher, than those given in the tables obtained from the reports issued by the Lady Sub-Commissioners; and the mean of these returns given above (12*s.*) is higher than that obtained from those tables (11*s.* 5*d.*). It may be noted that the results in the above table may to a certain extent serve to corroborate those already obtained. Where they do not agree the difference would appear to be accounted for by the fact that the means in this table are determined solely (except in the case of the tailoring trade in London) from statements made by individual witnesses, and frequently apply only to certain more highly-paid classes of labour in the industry under consideration; whereas those in the previous tables apply, unless otherwise specified, to the industry as a whole. This is particularly the case in the wages given in the tailoring trade, which are thus considerably higher than the means already obtained. In other cases (*e.g.*, in the buttonhole-making industry of London) daily rather than weekly wages have been given, the latter having been calculated from the former on the basis of six days' work a week, and this fact may account for the high rate in these instances. In some industries the results obtained from the two sources agree, or differ but slightly. In the tailoring trade of Walsall, for instance, the mean given above is 12*s.* 7*d.*, while that previously obtained was 12*s.*; and in the saddlery and harness trade the two rates were respectively 9*s.* 10*d.* and 10*s.* 4*d.* In the nail-making industry the mean given above is 5*s.* 6*d.*, and the maximum rate was stated to be 11*s.* 9*d.* In the tables obtained from the reports of the Lady Sub-Commissioners the mean for hand nail makers was given as 10*s.*, and that for spike nail makers as 4*s.* 6*d.*

(2) *i.e.*, with the exception of barmaids and London milliners. Detailed tables of wages, pp. 20-21.

[§ 697 (a).] Difference in wages.

(a.) *Arising from difference in the kind of work.*

697. (*a.*) It has been already seen that the mean of the returns of weekly wages for women and girls in all industries from which information has been obtained is 11*s.* 5*d.* It appears from the above table that the average weekly wage of men is 24*s.* 7*d.** The difference in remuneration is largely accounted for by the difference in the kind of work. The average wage of men is calculated as far as possible upon a basis sufficiently representative of the whole number of industries in which men are employed, and this includes a number of the best paid, best organised, and most highly skilled trades such as mining and engineering, for which women are physically unfitted. The mean of the returns collected for women is determined from a far smaller number of trades. These include a certain proportion which are also common to men, but women's work is to a large extent confined to the unskilled, unorganised, and ill-paid industries. In the case of those industries in which both men and women are employed, the difference in the rate of wages is also partly explained by the same cause, difference in the kind of work. Except in a few branches of the textile trade, it is very unusual to find men and women employed in exactly the same part of any industry. Under the present system of subdivision of labour, there is a constant tendency towards the appropriation of the heavier and more highly skilled—and therefore better paid—portions of the work by the men, while the easier, lighter, and more mechanical—and therefore worse paid—portions are left over for the women. A good deal of evidence in support of this was given by various witnesses examined before the Commission and by the Lady Sub-Commissioners, with reference to the textile and other industries, and in the Answers to Schedules of Questions in the miscellaneous trades of Group C., with reference to cabinet-making, hosiery, brush-making, printing, bookbinding, boot and shoe making, tailoring, tobacco and snuff-making.(1) The different wages paid to men and women in the textile industries were almost always accounted for by the men by the fact that the work was different. Thus, the representatives of the Amalgamated Card and Blowing Room Operatives' Association in Lancashire, which comprises districts in Cheshire, Derbyshire, and Yorkshire, stated that the wages of the women were not quite so high as the men, as their work was "not quite so heavy."(2) A wool and worsted cloth manufacturer at Huddersfield accounted for the difference in the wages of the two sexes by the fact that "the women weavers "get the simpler, cheaper kind of work, the men get the "more complicated kind."(3) Very often the difference lay not so much in the work itself as in the inability of the women to perform some necessary process connected with it. Thus a male weaver from Yorkshire explained that women could not "tune," *i.e.*, keep in repair, their looms, and their wages were less as someone else had to be paid to do it for them. In silk picking "they are compelled to have the aid of the men," in wool combing they "cannot tend and clean machinery."(4) At a carpet mill in Halifax, and in a printing house at Edinburgh, where men and women did the same work, a member of the firm explained that the women required assistance in the heavier part of the work. In the comb-cutting department in a vulcanite factory where the men's wages are 50 per cent. more than the women's, "the "men's work requires more skill, and they also sharpen "their tools."(5) From these facts arises the extreme difficulty of any comparison between the wages of men and women. Any conclusion which does not take them into account is necessarily fallacious. As, however, the work performed is usually either altogether or partly different in kind, there are no certain data for comparison. [§ 697 (a).]

(*b.*) But though it appeared that in most cases wages are different because the work is different or inferior in amount or quality, it would appear from the evidence that women are not merely paid a different amount, but they are paid at a different rate. Not only do they equitably receive less wages for less or inferior work, but these would appear in most cases to be estimated by a different standard. Thus: from Table III. men's wages are seen to be nearly twice as good as women's in those industries in which they are commonly employed. Nor does an examination of the details of this table mentioned above throw any light upon the great difference of remuneration in these trades. A Huddersfield weaver stated that in his district the women weavers did exactly the same work as the men, but were paid at a different rate. He acknowledged that they could not "tune" their looms, but he considered that 2½ per cent. "would be "ample" to pay "not only the whole of the cost of "'tuning,' but would also pay the capitalist for the "diminished product of the loom." The women's wages, however, were from 15 to 50 per cent. less than the men's.(1) At Ayr it was noted that women had been taking the place of the men for the last ten or twelve years in the warping departments in tweed and shawl mills, and that they were doing work for 11*s.* or 12*s.* a week for which the men were formerly paid 22*s.* to 28*s.* Though it was stated that the women did not produce quite so much, and they required some assistance, this hardly explains such an inequality in wages.(2) A Huddersfield woollen cloth manufacturer was asked, "Supposing a woman was "working at precisely the same work as the men, would "there be any difference in the price paid?" "There "would be, I think, roundly 20 per cent," was his reply.(3) A silk manufacturer also stated that though the women usually did lighter kinds of work for less wages, when they happened to do similar work they did it at "about half the price paid to the men." The plea so often given to account for the difference in wages in work that "women require assistance in the heavier parts," scarcely seems adequate to account for the difference of 38 per cent. paid in the wages of men and women in the Halifax Carpet Factory.(4) In the printing house before mentioned, the rate of pay to women was 4½*d.* and to men 6¾*d.* per 1,000 words. The employer reckoned that 1*d.* would cover the extra labour involved in assisting the women, so 1½d. or 18½ per cent. would represent the difference in rate, after allowing for the cost of assistance. Men tailors, an employer stated, were usually engaged for certain skilled work which the women could not do, but even when both sexes were employed on the same work, he had "no hesitation in saying that women are paid at a lower rate." This was also corroborated by the evidence of journeymen tailors.(5) In a certain branch of brush-making, it was observed that in the same work the women received 9*d.* where the men received 1*s.* An employer in the Glasgow potteries owned that though women's work was slightly different, they were paid at a lower rate.(6) Evidence was also given in the nail and chain trade that the women, although doing the same work as the men, received only about half as much wages.(7) From the foregoing evidence—and similar instances might be multiplied—it may be gathered that the difference in wages of men and women in industries in which they are both employed is not wholly explained by the difference in the nature, amount, or quality of the work performed, nor by the extra assistance sometimes necessary. It appears then that a deeper reason must be found to account wholly for the lowness of women's wages. Such lowness is partially explained by the fact that women have a practical monopoly of some of the most unskilled and worst-paid industries, and do the easier and lighter branches in those trades in which men and women are both employed together, while women's work is for some reasons inferior in quantity or quality. The evidence obtained on the subject pointed to the additional conclusion that even when all this is taken into account, women are paid at a lower rate, and their wages are estimated by a different standard. And though not equally evident in those industries in which only women are employed, because there are no data for comparison, the inference may perhaps be drawn that the miserably low wages that are often received are due largely to the same cause. But there is one notable

(*b.*) *Difference in standard by which women's wages are estimated.*

* It must be remembered that the term "women" has usually been taken to include "women and girls," while the term "men" has referred to men only. Hence none of the comparisons between the wages of men and women can be considered exact; they can only illustrate general tendencies. Thus a comparison is made in the last section which shows that the wages of men apparently tend to rise at a higher rate than the wages of women, and had it been possible to procure the wages of women alone as distinguished from those of women and girls, in so far as the evidence goes, it appears probable that the same conclusion would have been arrived at. The reason for taking the wages of women and girls together was the impossibility of separating them. In the reports of the Lady Sub-Commissioners they were practically treated together, and the line of demarcation between them was too undefined for any clear or consistent division to be made. Moreover, the term "girl" is often used of all young unmarried women, and therefore it comprises the vast majority of female workers. This is not the case with men and boys. The line of demarcation between men's and boys' wages is much more clearly drawn, and the difference in earnings appears to be greater than the difference (where obtainable) between the earnings of women and girls (*see* Tables IV. and V. for year 1886). Thus, the average wages of men in 1885, according to Mr. Giffen, were 24*s.* 7*d.*, and of boys, 9*s.* 2*d.*, while the average of women were 12*s.* 8*d.*, and of girls, 7*s.* Therefore, a comparison of the wages of women and girls (since they are in most cases inseparable) with those of men and boys would really be more misleading than a comparison with those of men only. This fact, however, must be borne in mind in connection with the summary.

97 (b.)] exception to this rule, the weaving industry of Lancashire, and to a certain extent of Yorkshire. A representative of the Northern Counties' Amalgamated Association of Weavers states that men earn no more than women, the highest wages for adults of either sex being 28*s.* or 30*s.*, and the lowest 12*s.* In Yorkshire the custom appeared to vary, at Huddersfield the women were paid on a lower scale, at Bradford it was the same as the men's.(1) The explanation of the equal rates of wages paid to the weavers of both sexes in Lancashire and Bradford seemed to lie in the fact that the women weavers, who are in a great majority in both districts, make up a large part of the men's unions. They form two-thirds of the association in the first case and nearly three-quarters in the second.(2)

COMPETITION BETWEEN MEN AND WOMEN.

ent of
petition
ween
n and
nen.

698. The extent and nature of the competition between men and women has already been partially dealt with in the last paragraph. In certain trades, such as engineering or millinery, for which one or other sex is obviously unfitted, the question does not arise. In many other industries, as has been shown, in which both sexes are employed, custom and expediency have relegated certain more difficult or heavier branches to one sex, and other easier and lighter branches to the other. Where, however, the line of demarcation is not very clearly drawn, as in the tailoring trade, or where women are trying to work their way into more skilled and better paid departments, hitherto monopolised by the men, friction appeared to arise. This is also the case in those comparatively few industries such as weaving, in which exactly the same work is done by the men and the women. Thus in Yorkshire we find "weaving and wool "combing are the two branches of the textile manufacture "in which women compete largely with men. In most "other branches the work is recognised as belonging "exclusively to one or the other."(3) In Lancashire the greater part of the spinning is the monopoly of the men, and the Amalgamated Association of Operative Cotton Spinners contains 18,926 members who are all males. It was observed that the "ring and throstle" spinning, in which women were employed, competed "slightly" with the "mule spinning" of the men. The different conditions required by the former process, however, render it unlikely that the women will replace the men to any serious extent.(4) In the jute and flax industry of the north, and in the cotton industry of the west of Scotland, men and women do not compete with each other, as spinning and weaving proper are mostly confined to the women. Carpet weaving is the only branch in which men are employed in the western district, and even then they are employed exclusively on hand looms. At Arbroath there are also a few male weavers in the flax manufactories. Nor is there much competition in the woollen industry in the south either, for there spinning is performed solely by the men, and weaving for the most part by the women.(5) The extent to which women as well as men are employed in other industries can be estimated in some measure by the Answers to the Schedules of Questions. It appears that the great majority of employers in Group C., which comprises all the miscellaneous industries in which women chiefly work, employ some proportion of female labour. In 122 answers, the number of women employed is said to be equal to or greater than the number of men. Excluding the 73 answers which come from the textile trades, 17 come from tobacco, 16 from clothing, 9 from printing and bookbinding, 5 from potteries, and one each from the rope spinning and baking trades.(6) There are many other answers in which the number of women employed is said to be at least half the number of men. In the industries comprised under Groups A. and B., women are only employed in the nail and chain and nut and bolt trades; in canal boats; and also to a certain extent at the pit's mouth, especially in Lancashire and Cornwall.(7)

699. The most salient points that arose in connection with the wide question of the competition of men and women may be briefly summarised thus. The men object to the competition of women on two grounds. Women, they complained, encroach upon their trades and tend to push them out of employment. Not only are they liable to be thus displaced, but the competition of women's labour, being cheaper, tends to pull down their rate of wages. This, they assert, happens in two ways: Either the women do the same work at a lower price, or they do more unskilled work with the aid of machinery. It appears that the men try and protect themselves, either by adopting an altogether unfriendly attitude and endeavouring to exclude women entirely from certain trades or branches of trades through Trade Union rules, &c., or by trying to raise the rate of women's wages for similar work to a level with their own. [§ 699.]

(a.) The Yorkshire textile industries.

(*a.*) The evidence with regard to the competition of women in various trades, more especially in the Yorkshire weaving and in the tailoring trades—where the pressure is very acute—illustrates all these points. That women were supplanting men by cheaper labour was a bitter complaint on all sides where the work of the two sexes tends to overlap. The Bradford and Huddersfield Power Loom Weavers' Associations state respectively, that "women do the same work as the men. Men are being displaced," and that "women have for some time been driving men out of "the trade on account of less wages."(1) "We have scores, "I may say hundreds, of able-bodied men, good weavers, "walking the streets," said a male weaver, "in the "Huddersfield district, who cannot get employment "in consequence of women's labour." At Bradford equal rates of wages are the custom, while at Huddersfield women are paid less; and it appeared that the competition for work is most acute in the latter district. But the other grievance, that this cheap female labour tends to bring down the men's wages, is brought forward on all hands. At Huddersfield, it was asserted that "men are offered women's wages now," and "unfortunately" many have accepted those terms, as it was a choice of no work at all or work at the "women's statement."(2) In the same way representatives of the West Riding of Yorkshire Power Loom Weaving Association stated that weavers received lower wages than any other class connected with the industry, because they alone suffer from competition with female labour.(3) Although the rate of wages is the same for both sexes in Bradford and Batley, the very low wages of the weavers in those districts, *e.g.*, 13*s.* 4*d.* and 10*s.* to 12*s.*, was explained by the fact that the proportion of women to men is larger there than in any other Yorkshire towns. They form three-quarters of the weavers' association.(4) Why wages are reduced by the competition of women in the textile industries in Yorkshire to so much larger an extent than in Lancashire was partially explained by the statement of one of the Yorkshire male weavers concerning organisation. Only one-sixteenth of the weavers in the West Riding, he said, were members of the Association. He attributed this largely to the preponderance of women, who do not care to subscribe as they are always intending to leave the mills when they are married.(5) In Lancashire not only are the male cotton weavers much better organised than the male woollen weavers in Yorkshire, but the women are as well organised as the men.(6) As far as that evidence from Yorkshire is concerned, it at least supported these two conclusions in connection with the competition of men and women. "Where women predominate largely, men are working at the women's wage."(7) "The tendency with all employers is to substitute women's labour for that of men, and some have entirely done so."(8)

(b.) Tailoring.

(*b.*) The extent and nature of the employment of women in the tailoring trade varies in different places. Speaking generally, women are far more extensively employed in the lower branch trade, which consists mainly in "ready-made" clothes, and is largely sweated, than in the upper branches of the trade, which consists chiefly of "bespoke goods" and "customers' work," the best part of which is done by hand on the premises by men tailors. There are, however, infinite varieties of grades and classes of shops in the tailoring trade, and the subdivision of labour is carried on to such an extent that some persons spend their lives in sewing on buttons. In many places, however, women are employed in the "bespoke" trade, or in certain of its less skilled parts; it is also partially sweated, especially in its lower branches. Thus it appeared from the evidence that neither sweating, nor the amount and nature of the work done by women, depends absolutely on the "higher" or "lower" parts of the trade. This was also shown by the evidence given before the House of Lords' Committee on the Sweating System and the reports of the Lady Sub-Commissioners.(9) There was a consensus of opinion amongst journeymen tailors that the extensive employment of women in "lower class trade has a tendency to lower wages. Of "course if an employer can get a woman to make trousers

Mr. Burnett's Report on the Sweating System in Leeds.

[§ 699 (b.)] "or 10½d., he will not employ a man to make them for "2s. 9d. or 3s." A member of the executive council of Amalgamated Society of Tailors complained that women turned out the men, because they did 24s. worth of work for 14s. The disputes that occur in this trade illustrate the constant struggle that competition causes between the women who are trying to fight their way into the better paid and more skilled branches of a trade, and the men who desire to exclude them.(1) In Glasgow the two departments in which women compete with men are vest making and trouser making, but this is only in the second-class, third-class, and lower grade shops. In first-class shops, which are chiefly engaged in "customers' work" which requires a high standard of skill as regards cut and finish, women are never employed, except occasionally on vests which are given out to home workers. Vest making is the branch of the trade which, it is said, women can most easily take up when they are allowed to do so. As they "take the vests "at the employers' own terms, while men insist on being "paid at the union rates, the result is that vest making "has become the chief plank by which women are being "floated into the trade." In third-class and lower grade shops the women have succeeded in procuring for themselves most of the vest making, and a great part of the trouser making. In the second-class shops, however, the struggle appears to be still going on.(2)

(c.) Miscellaneous trades.

(c.) In the printing trade in Edinburgh there is a good deal of jealousy of the women compositors who were introduced during the men's strike in 1872 for a 51 hours' week. As they work at a lower rate than the men they are considered to furnish a standing obstacle to any movement on the part of the men for an advance in wages. The competition, however, is limited, because the physical disabilities of women prevent their taking up the heavier branches of the trade. It was further stated by an employer that women rarely remain long enough in the trade to learn the most skilled work.(3) Bitter complaints were made by male representatives of the chain and nail industry as to the disastrous effects of the competition of women on the rate of wages. They were paid, it was asserted, at a lower rate, and the tendency was for this rate to become general. The Lady Sub-Commissioner who subsequently invested this industry did not think that this point was clear.(4) A wharf and barge labourer objected to the employment of women in such rough work as bottle washing, sacking and bag making, because it "threw the men out of work" and "lowered wages." Similar complaints came from the hosiery trade.(5) Another occasion for the displacement of male by female labour was stated to be the introduction of labour-saving machinery. The man who previously performed the process by hand is, it is said, supplanted by the girl who can tend the machine at a low rate of pay. This amounts simply to the substitution of cheaper unskilled labour for dearer skilled labour. In the watch trade at Coventry the introduction of women's labour was opposed by the men for the first five years, but the women now enter very little into direct competition with them, as the skilled work is for the most part done by the men. The hand work for which men were formerly paid about 18s. a week is now done by women with machinery for about 12s.(6) Similar instances were noted in the pottery and pipe factories at Glasgow. Plates which were once made by hand labour by the men are now made very cheaply by the girls with the aid of a machine called the "jolly." It was observed that except in one or two departments of the watch trade attempts to promote women to skilled work have failed. They seem to prefer mechanical work which requires little attention to skilled work which requires a great deal more. An employer at the potteries stated that he had long been anxious to educate women workers in the more highly skilled decorative departments of the trade, for which he thought they would be quite capable. He was willing, moreover, to pay them at the same rate as the men. But all his efforts had been hitherto frustrated by the opposition of the latter. This last statement, however, was contradicted by the manager of the works.(7)

Attitude of the men (i.) Oppose female labour altogether.

700. The attitude of the men or of their unions to the competition of cheap women's labour in many of the cases described above appears from the evidence to be one of uncompromising opposition. This is the position taken up by the Potters' Union in Glasgow, the Typographical Society, the Operative Pearl Button and Stud Worker Protection Society. By rule 21 of the latter any member who either teaches a woman any part of the trade or works in the same shop with a woman shall be fined.(8) Mr. Gordon, the honorary secretary of the Master Tailors' Association, complained of the great opposition offered by the Amalgamated Society to the employment of women tailors—who, he affirmed, were given the less skilled work at lower wages. He instanced a strike that had occurred on account of the employment of two tailoresses. The union would not allow its members to return unless a guarantee was given that no work should be "given out" and no woman employed except in machining. He further stated that there was plenty of room for the women in the lower branch of the trade, as in the busy season they suffered from a dearth of men. The men refuse to take apprentices, and the employers need some other supply of labour to take the place of boys. In his opinion the plain sewing part should be allotted to the women, and the highly skilled part to the men.(1) The rules of the Scottish National Operatives Tailors' Society contain a clause by which members are forbidden to assist a woman in work connected with the trade. A change of attitude, however, has been observed amongst the men in this society in the last two years. Their opposition is now not to the employment of women, but to their employment at a lower rate of wages. At a conference in 1892 a resolution was passed to the effect that "it be an instruction to the N.E.C. to initiate a movement for the organisation of the female workers in our trade, the funds of our society to be responsible for the initiatory expenses." Steps in this direction have been taken.(2) At Liverpool also the Trades Council assisted the formation of a Tailoresses and Coat Makers' Union on the occasion of a strike.(3) The women were also supported by the Manchester Tailors and Pressers' Society. A male weaver from Yorkshire stated that he believed there had been for some time "a growing feeling "that if women do the same amount of work as the men, "their wages should be the same."(4) It seems, therefore, that if women were paid at equal rates for the same work as the men, a great deal of the opposition of the latter would disappear. Though any increase in the number of workers in any industry tends to limit the chance of the individual of employment, if all are competing on equal terms there is no real grievance. One witness was willing to admit the woman's "right to live." "The great difficulty," said a weaver who was advocating equal payment for equal work, "that the men fear is that the employer will force the rate of men's wages down to the women's, not that the women's will be raised to the men's."(5) The experience of the textile industries in Yorkshire gives some grounds for this apprehension. But where this result does not occur, equal wages to both sexes for equal work is obviously desirable.

(ii.) Or try to raise the rate of women's wages to their own.

Possible effect upon the employment of women of equal rate wages, and question of the superiority of men's labour.

701. Though an equal rate of wages would be an unmixed advantage to the woman worker who secured employment, the effect produced upon the extent of the employment of women is, it appears, not so unquestionable. It is at this point that the absolute superiority of men's labour would come in. Though there may be many women workers who do as good or better work than men, speaking generally, it is probably true to say that men from their greater physical strength and power of endurance are more profitable workers than women. The question is often rather one of quantity than quality. The superior strength of a man enables him to produce a larger output. In the textile and other industries he can perform certain necessary mechanical operations in which women have to seek assistance. He is also less liable than the woman to interruptions of a domestic character or from ill-health, and is therefore presumably more regular. A larger output, from whatever cause, means a larger return to the employer on the capital sunk in plant and machinery. Hence on economic grounds, if a man and a woman compete for certain work, for which the rate of pay to both sexes is equal, the preference will probably be given to the man. "When the time comes that I have to pay females the "same price as males, I shall have no females," was the remark of an employer in the nail and chain industry which was quoted by a male worker in reference to this question.(6) This apprehension appeared to prevail amongst the tailoresses of Glasgow. It was observed "what women chiefly fear is that any agitation on the "part of the men for the payment of equal rates to women "workers might result in the exclusion of the latter from "the trade. The general opinion among the more intelli-"gent and experienced female operatives . . . seems "to be that it would be more judicious for the women to "aim at a time log of their own, which would give not "equal rates, but a partial re-adjustment of the dis-"crepancy that now exists between their rates and those

" of the men, at least until altered conditions allow of a " woman's obtaining the same training and skill as are " possessed by the men workers, and being admitted to " first-class shops and all the branches of the trade. " Opinion is, however, much divided on the point."(1) It is difficult to ascertain from the evidence the absolute or relative superiority of the work of men over that of women, and it is still more difficult to make any general statement on the subject, owing to the contradictory nature of the evidence. Thus a Huddersfield employer said " good men weavers will do even more than good women weavers," while a representative of the Northern Counties Amalgamated Association of Weavers was of opinion that " a female is as good a weaver as a man, in fact in most cases better."(2) A woollen manufacturer in Scotland stated that when men and women were employed in weaving at the same rate, " the woman makes more money as she is more " dexterous." On the other hand the secretary of the Cotton Spinners and Manufacturers' Association in North Lancashire said that although a good woman weaver would earn as much as " many a good male weaver," yet, " upon the whole, the balance " would be slightly on the side of the men. " Men are capable of more continuous " exertion than women, and they are stronger no doubt."(3) In the fustian velvet-cutting department, it was stated that men and women were " paid at the same rate, but " men earn about twice as much as women, because of " their greater strength."(4) An employer at the Glasgow potteries preferred men workers on account of their greater strength and " steadiness of attendance."(5) The evidence from Glasgow distinctly supported the view that men's labour is on the whole superior to women's. The decay of the cotton industry in that district was largely attributed to the fact that weaving was there entirely confined to women. " It is generally believed in Glasgow that the " proportion of men workers is an immense advantage for " the English manufacturer, the men's continuity at their " work, their greater physical strength, their ability to " keep the machinery in order . . . all combine, it is " asserted, to give a higher standard of application and " production in Lancashire than in Scotland, where the " trade suffers from general causes which affect women " workers."(6) Thus in spite of somewhat conflicting evidence, it appears that the conclusion arrived at above expresses a general truth. In so far as the causes which tend towards the superiority of men's labour do not operate, men and women would stand an equal chance of employment on similar work at a similar rate of pay. But in so far as they do operate, women are at a disadvantage as compared with men in the race for employment at an equal wage. However this may be, there is apparently no doubt that the standard of an equal rate of pay for both sexes should be the one which should be approximated to. If, however, the rate of pay in the case of women could be so adjusted as recommended by the tailoresses at Glasgow as to allow roughly for the superiority of men's labour, the equality between the two sexes would be more real, and the rate of pay would express the " economic value " of the work. The great danger is that the women's wage would then be estimated by a different standard to the men's, and that under the specious plea " inferiority," either of quantity or quality, a far larger amount would be deducted than is equitably attributable to that cause. It has been shown in the second section that the evidence shows that this is what has so frequently happened. [§ 701.]

Effect of competition of men and women in the same employment upon their wages respectively.

702. It appears from the evidence that the competition of men in industries in which women are employed has a tendency to raise the rate of women's wages. On the other hand, various instances have already been given of the almost invariable tendency of the competition of women in the same industries as the men to lower the rate of the men's wages. It must, however, be remembered that such factors as organisation and skill must be taken into account. The chief textiles may be taken to represent, as far as women are concerned, the skilled and well organised industries. It will be seen in Table VI. (line 4) that between 1860 and 1891 the mean of the returns of women's wages in the cotton, hosiery, woollen, and worsted trades have increased as much as 42 per cent., although the cotton industry, in which the rise has been most marked and in which by far the largest number of women are employed, is only regarded as of equal importance with the other industries. The extent of the increase in wages in these industries can be estimated by comparison with the rate of increase in other industries in the same period, which is given in the same table.

14. (2) Shoddy and Flock manufacture.	—	8 0	—	—	—	7 6	The average in the 2nd column refers to the period 1880.

(1) Details obtained from returns of wages between 1836 and 1886, and for 1886 issued by the Board of Trade from the Lady Assistant Commissioners' Reports, and from Appendix to volume of evidence given before the Commission as a Whole.
(2) Evidence was also given to the effect that the rates of wages had fallen in the confectionery trade, the umbrella covering trade (Scotland), and among the straw-hat machinists and finishers.
(3) It was not always quite clear whether the average referred to women alone or to women and girls together, but the division has been made as accurately as possible.

VI. SUMMARY of RESULTS of above TABLE.*

Industries.	Mean of the above Estimates; 1860–1. Women and Girls.	Mean of the above Averages; 1886. Women and Girls.*	Mean of the above Estimates; 1891. Women and Girls.	Percentage of increase in first two periods.	Percentage of increase in last two periods.	Percentage of increase in whole period.
	s. d.	*s. d.*	*s. d.*			
Industries numbered 6, 7, 9	7 10	7 11	—	1%	—	—
Industries numbered 5, 11, 12, 13, 14	9 1	—	8 11	—	—	—2%
Industries numbered 2, 5, 9, 11, 12, 13, 14	8 11	—	9 9	—	—	9%
Industries 1, 3, 8	8 9	10 5	12 5	19%	19%	42%

* It may be noted that the average wage for women and girls in the year 1886, in certain typical industries given in Appendix 124 to the volume of Evidence given before the Commission Sitting as a Whole, is 12*s.* 8*d.* for women and 7*s.* for girls. This is in very close agreement with the above means for women and girls together.

GENERAL CONCLUSIONS WITH REGARD TO WOMEN'S WAGES.

Question of the standard by which women's wages are estimated.

703. The following table summarises the main conclusions arrived at on the question of the wages earned by women.

VII. TABLE summarising RESULTS of TABLES III., IV., and VI.

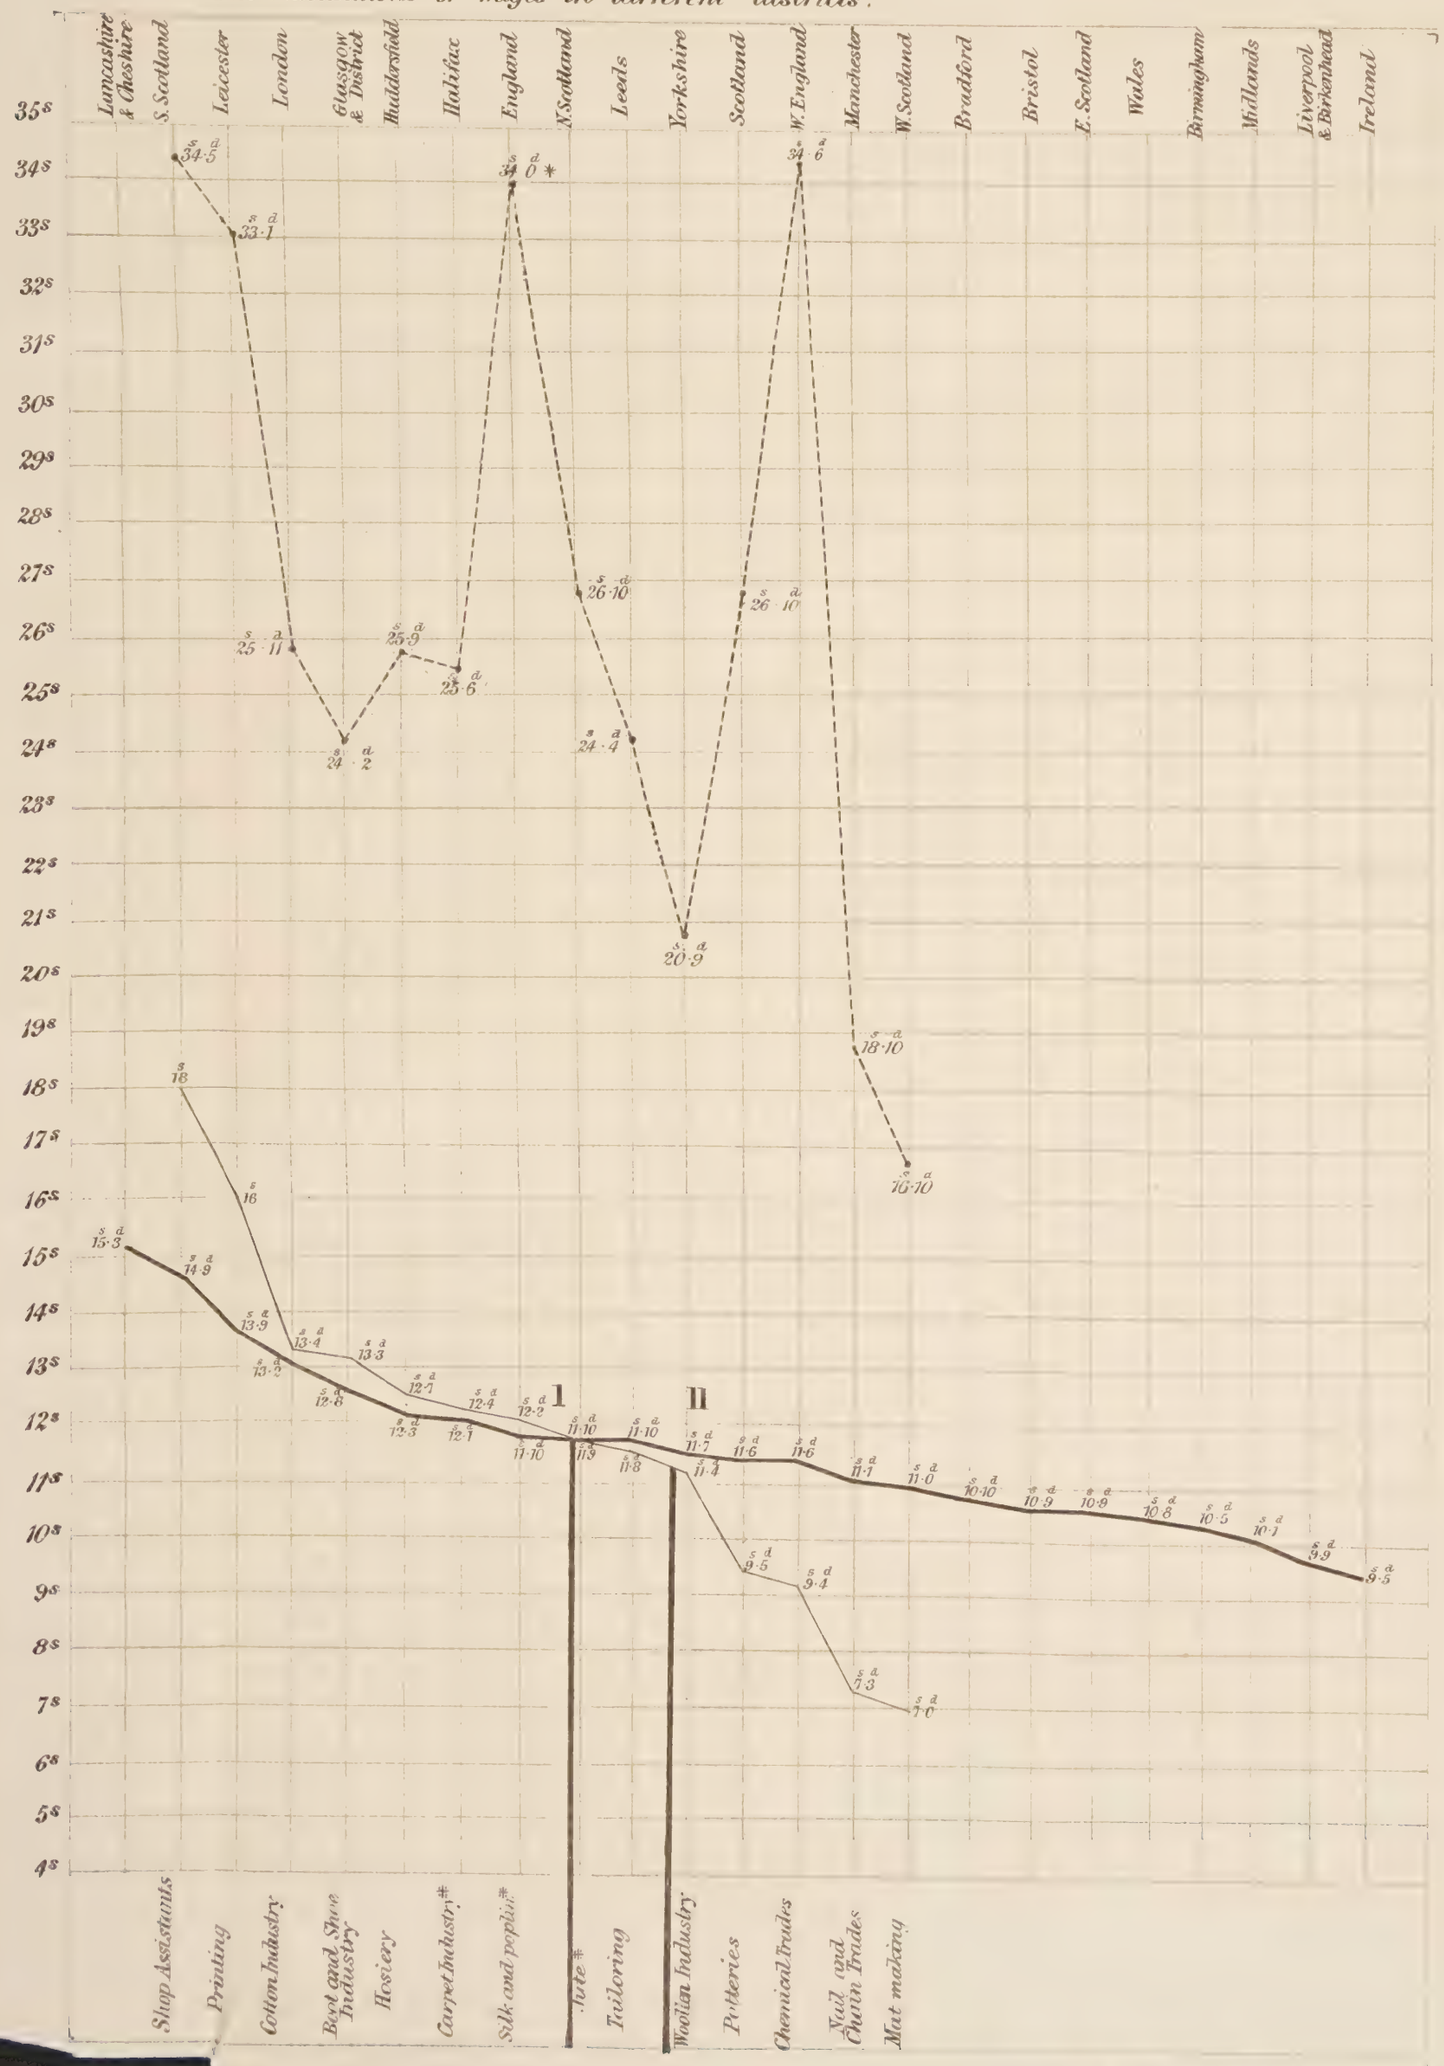
A. MEN'S WAGES.*

Industries.	Mean of the Estimates given in Table IV. (Weekly Wages). 1860–1.	1890–1.	Percentage of Increase.
	s. d.	*s. d.*	
1. Hosiery and Carpet	22 1	29 7	34%
2. Cotton	22 0	25 11	18%
3. Cotton, Hosiery, and Woollen	21 5	27 4	27·6%
4. Cotton, Hosiery, Carpet, Woollen	24 9	28 10½	17%

* The rise in men's wages in the last 50 years has been about 100 per cent. according to Mr. Giffen. These estimates have only been given for the sake of detailed comparison with women's wages. The general result established by Mr. Giffen has been used in the text.

DIAGRAM SHEWING.

1. *The wages of men compared with those of women and girls in various districts* ⁜
2. *The fluctuations of wages in different districts.*



EXPLANATION OF DIAGRAM.

(i) *Dotted line, thus _____; Wages of Men in industries specified below.*

(ii) *Thin black line thus ___; Wages of Women and Girls in industries specified below.*

(iii) *Thick black line thus ▬; Wages of Women in districts specified above.*

(iv) *Thick erect black lines; mean wage of Women and Girls.* I *In industries dealt with in the diagram.* II *In all industries.*

⁜ *It was not always quite clear whether the wage given referred to women alone or to women and girls together. In those of the industries specified below (which are marked thus* ⁜*) the wages given refer probably to women alone.*

* *This figure refers only to a special class of workers.*

B. Wages of Women and Girls.

Industries.	Mean of the Estimates given in Table V. 1860-1.	Mean of the Estimates given in Table V. 1890-1.	Percentage of Increase or Decrease.
	s. d.	s. d.	
1. Carpet (Kidderminster), Potteries, Tobacco, Rope-making, Shoddy, and Flock.	9 1	8 11	−2%
2. Boot and Shoe, Carpet, Worsted, Potteries, Tobacco, Rope-making, Shoddy, and Flock.	8 11	9 9	9%
3. Cotton,* Hosiery, and Woollen	8 9	12 5	42%

The mean of the returns collected for woman in 1860–1 in the Kidderminster carpet, pottery, tobacco, &c., rope-making, shoddy and flock trades was 9*s.* 1*d.* The mean in 1891 was 8*s.* 11*d.* If these statistics are to be trusted, and so far as the mean of the returns can be taken as representing true averages, women's wages in those trades would seem to have not merely been stationary, but to have positively decreased. It appears probable that if the information concerning the alleged decline in wages in the confectionery, umbrella covering, and straw-hat trades were sufficiently reliable, and covered a sufficiently long period to be taken into account, the same conclusion might be drawn from a larger number of industries. The means of the returns given in 1860–1 in the above-mentioned trades, and also in the boot and shoe and worsted industries, which group represents the greatest number of industries under consideration, both skilled and unskilled (excluding the organised industries), was 8*s.* 11*d.* In 1891 it was 9*s.* 9*d.*; it had therefore increased by only 9 per cent. The apparently arbitrary selection of the industries which furnish data for these comparisons is explained by the fact that the necessary information was only forthcoming in these instances. Women's wages, in the industries under consideration, except in certain skilled and organised trades, have either decreased, remained stationary, or have increased but slightly. It may, perhaps, be the case that the number of women engaged in the organised industries is so large that the gain there, relatively greater than that obtained by the men, would outweigh the comparatively stationary rate of wages in the other industries. In the Census Returns for 1891, it appeared that while the number of women in the cotton industry was nearly 333,000, the number of women employed in all the other industries enumerated in Table V. amounted to about 370,000. Taking this into account in finding the averages over the whole period, women's wages would probably appear to have risen faster than men's. On the other hand it must be remembered that the industries mentioned in Table V. include less than 800,000 women workers out of a total of more than 1,800,000 in the industrial class. The wages of a million women, therefore, in the industrial class, that is excluding domestic service, remain unaccounted for; and the evidence obtained both by the House of Lords' Committee and by the Lady Assistant Commissioners, and from other sources, went to show that this large proportion of women belonged rather to the body of unorganised and underpaid workers than organised and better paid.

Women and girls in domestic service are, however, on an average, better remunerated than those engaged in other occupations. Whereas the average yearly wages of women in non-domestic employments amounts to about 32*l.*, in domestic employments it is nearly 50*l.* Similarly, the average remuneration for girls in non-domestic employments is about 23*l.*, and in domestic employments nearly 28*l.* a year. It is moreover important to note that domestic service engages about a third to one-half of all the women and girls occupied. For this reason, although the average wages of women, excluding domestic servants, were only about half those of men; including domestic servants, the proportion rises from one half to two-thirds.

* This industry has not been weighted in estimating the above mean; if it had, the rise would have been greater.

WAGES IN HOME INDUSTRIES AND "SWEATED TRADES." [§ 704.]

Very low rate of wages obtained in home industries.

704. Home industries are attacked on two grounds. Firstly, because of the starvation wages paid to many workers in them. Secondly, because this low rate of pay has a distinct tendency to lower the ordinary rate of pay in factories and workshops. Both these points have been incidentally touched upon in part of the foregoing summary, in reference to the low average wage of women, and to the competition between men and women. Some more detailed information, however, may be given on both points. It is impossible, as may be seen from the detailed account of visits to home-workers in the Lady Sub-Commissioners' Reports, to make any general statement concerning the ordinary rate of pay in home industries, as it varies enormously in different trades, parts of the trade, and districts. In some cases a respectable wage was earned, but more often wages were exceedingly low. Thus, two very different classes of home workers in the tailoring trade at Glasgow were mentioned. One woman was an experienced worker, and her monthly wages ranged from 1*l.* 1*s.* in February to 6*l.* 15*s.* 4*d.* in July. The other woman was elderly, and during an unusually bad winter she was driven to accept an order for finishing trousers at ½*d.* a pair, each pair taking two hours' work. She only executed one order, "finding," as the narrator remarked, "that it was easier to starve without the work."(1) The average hourly wage of outworkers in the villages round Dudley who supply much of the clothing trade of that town was 1½*d.*(2) A widow in Manchester who "finished" shirts at 2½*d.* a dozen, whatever the work required might be, could never earn more than 2*s.* 2*d.* a week.(3) A tailoress in Lambeth "finished" boys' trousers for 3*d.* a pair, out of which 1*d.* had to be subtracted for thread and twist. It took her 2½ hours to finish one pair, so her rate of pay was less than 1*d.* per hour.(4) In the hosiery trade a woman seamed stockings for nine hours daily, and if she worked very hard earned ¾*d.* per hour. Her average weekly earnings were 3*s.*(5) A sack sewer and a rope teazer at Arbroath stated that their average wages were about 3*s.* and 3*s.* 6*d.* a week respectively.(6) It was stated that in the lace trade at Nottingham a great quantity of work which was formerly done inside the factories, such as scolloping, is now given out at reduced prices. An employer who at one time employed 50 women as "scollopers" in his factory, most of whom earned 15*s.* a week, now gives out this work to home workers, to whom he pays 6*s.* or 7*s.* a week. From the evidence of the out-workers, it appeared that the rate of payment was sometimes as low as ½*d.* per hour.(6) In Glasgow a woman was found who did tailoring work for Government contracts. The shop which gave them out paid 2*s.* 2*d.* per dozen for making Dungaree jackets, the dozen taking 14 hours. Another woman "finishes" them for 4*d.* per dozen, and makes perhaps "four dozen in a day." The total cost to the shop for the making and finishing a dozen of these jackets by outside workers was therefore 2*s.* 6*d.* Inspectors' "overalls" were also given out at 4*s.* 8*d.*, and certain "overall" trousers at 1*s.* 6*d.* per dozen. The witness said that she could make six inspectors' "overalls" in a day, or three pairs of "overall" trousers, *i.e.*, she could earn 2*s.* 4*d.* or 6*d.* for the day's work.(7) In all the cases quoted above the information was received from the home workers personally. One of the worst cases of sweating was that related by the secretary of the Shirtmakers' Union in Manchester. A man in Gorton had a workroom for which he paid 5*s.* 6*d.* a week. He took out work from Manchester, and employed women in this workroom at shirtmaking. He made them pay 1*d.* for rent and 1*d.* for fire, and a certain sum for cotton, which was 1½*d.* more than the price in retail shops in Manchester. The women also paid 1*s.* a week for the use of the machine, no matter how slack the work might be. Although they were nominally buying the machines on the hire system, they were never employed regularly or long enough to become the owners. Besides all these deductions, he only paid them 7*d.* a dozen for work for which the witness had been paid 1*s.* by another firm who had once employed her.(8)

Grievance that the competition of home workers lowered the ordinary rate of pay.

705. The grievance that the low rate of pay received by home workers lowered the ordinary rate of pay in factories and workshops was brought forward from many quarters. The complaint was made by unmarried with reference to married women, by women in factories with reference to those who worked at the same trade at home, by men with

[§ 704.] reference to all female home workers, and by women's Trades Unions in the tailoring trade with reference to the competition of both sexes in domestic workshops. Strong representations were made, it was stated, by unmarried women against the competition of married women in the tailoring trade. The latter, they urge, not being entirely dependent on their own earnings take work at a lower rate and thus lower wages. No evidence, however, was forthcoming in proof of this, and it appeared to the Lady Sub-Commissioners that any tendency amongst married women to take work at a lower rate was due to the greater pressure of their circumstances.(1) This view is corroborated by Miss Collet, "Whenever I have found "women who said they worked at very low rates, they have "been working for their living and for that of their "children; their husbands have always been men "disabled and out of work . . . The women I have found "working at really starvation wages—sack-makers and "carpet-slipper makers—were women who had either to "support themselves or to fall back on charity or the "workhouse."(2) On the other hand, the president of the Midland Counties Hosiery Federation stated specifically that in both Leicester and Nottingham married women worked for a lower rate of wages than single women, and this brought about a general reduction. "They come "into such keen competition with single girls because they "have got husbands at work, and they are generally the "people who can afford to accept reductions in wages."(3) The indirect effect of the competition of home workers was clearly shown by an umbrella maker. "Home workers," she said, "are used as a screw to reduce the others. "Married women take the work home and sit up till all the "hours of the night to do it, and lots of them get their "children to help them after school hours. They can thus "lift good wages, and when we complain, the employer "points to this and says, 'Look at so-and-so's big pay. "Why can't you make this?" Thus the fact that out-workers can be got to do the work for as low or a lower rate is usually the standing obstacle in the way of procuring a rise in wages on the part of the factory hands.(4) Whenever the work is of such a character that the children or any members of the family can help, a low rate of pay will be accepted by the out-workers, which is naturally insufficient for the single worker in a factory. In this way the competition of home industries is severely felt. It was stated that the objectionable features in the prevailing system of domestic workshops in Luton appeared when the attempt to arrive at any estimate of the wages there paid was made. The majority of straw-hat makers are small men who make a few special shapes on the chance of being able to sell them afterwards. When these are in demand they obtain good prices, but at other times they are obliged to sell them at a low price to the merchant who can afford to keep them in stock until they are again wanted. The weekly return on the capital and labour spent vary very considerably, and the small maker is only enabled to maintain what he regards as an independent position by the fact that his wife and children work for him without fixed wages. In good times the family are provided with clothes, and the children have pocket-money given them; in slack times they only buy what is absolutely necessary.(5) In the Bristol district, where much of the cheaper sort of the clothing trade is given to out-workers, the effect produced on the wages of factory hands is again indirect rather than direct. There appears to be little complaint that the out-workers actually take lower rates for the same work, but as they are in a great majority, and are able, moreover, to live on lower wages than would be sufficient if they had to incur all the expenses incident to factory work, it is probable that the rate of payment in factories is kept down.(6) The London Tailoresses' Trade Union complained of the "unfair" competition of tailoring domestic workshops. The workers in them worked much longer hours, and were content with lower rates of payment, and thus reduced the wages of others. A man and his wife and daughter, it was stated, would perhaps sit up all night to make a garment, which was given out to them in the evening to be taken back again in the morning.(7) The objections of the men to the competition of women, which in many cases meant the competition of home workers, have been already dealt with. It is especially noticeable in the chain and nail and nut and bolt trades. A representative of the latter industry stated that by means of boys' and women's cheap labour, sweaters are able to supply the principal employers with work done in home workshops at a lower price. They thus undersell the factories where the adult male operatives are paid at the "list price." This tends eventually to reduce wages. A witness representing the File Cutters' Association at Sheffield also complained that women were sweated in home workshops.(1)

GRIEVANCES CONNECTED WITH THE CALCULATION OF WAGES AND THE METHOD OF PAYMENT.

Fines.

706. Fines may be divided into two classes, those inflicted for purposes of discipline, and those inflicted in order to compensate for damage done. They are much resorted to in the textile industries, in shops and places of refreshment, and in some of the East London confectionery factories. In many cases some system of fining is the only means whereby discipline can be maintained; it seems to be a reasonable and necessary precaution, and prevents recourse to stronger measures, such as dismissal; hence, in well-managed factories or establishments no serious objections are raised. As, however, the system is not uniform, and the application of it depends necessarily on some individual—a foreman or shop-walker, as the case may be, who may or may not be a fit person to exercise this power—abuses constantly creep in. Complaints were made before the Commission, and to the Lady Sub-Commissioners, that in many cases the fines imposed were unfair, vexatious, and oppressive. It is with the grievances of women workers on this head that this section will be concerned.

(a.) Di
ciplina
fines.
(i.) Te
industi

(a.) The disciplinary fines which are imposed in the textile industries, particularly in England, are almost exclusively those inflicted to enforce punctuality and regularity of attendance. About these not very many complaints are made. They range from 1*d.* to 6*d.* in Yorkshire and Lancashire. The weavers' associations in the latter district object to the present system of fines for late attendance, but they endeavour to secure punctuality on the part of their members by other means. It was stated that at Rochdale the Union secretary, upon receiving a complaint with regard to unpunctuality, attended himself the following morning at the place where it had occurred, and excluded for the day all those who were not there at three minutes past six. This action on his part was accepted without any ill-will, and no complaint for unpunctuality has since been made by the firm.(2) At many mills, in addition to or instead of the fines, the gates are locked for periods varying from five minutes to two hours. This was much complained of by some of the silk operatives. The worker who arrives a few minutes late at certain mills is "locked out" as a rule until the next starting time. Not only does she suffer a proportionate loss in wages, but if her home is at a distance she finds it difficult to obtain shelter for the two or three hours during which she has to wait, and the consequent exposure in bad weather is sometimes attended by serious results. It was noted that Messrs. Beresford, Brothers, of Congleton, provided a room in which those who are late can find seats and shelter, although in this instance the gates are only locked for fifteen minutes. If this were always done, the hardship would be greatly lessened. A very good method was adopted in some cases by which the fines were presented to the local infirmary, or paid into the sick benefit club, or applied in some way for the benefit of the workers.(3) A different sort of case was reported by one of the Lady Sub-Commissioners from a Bradford mill. A girl had what is known as "ends down." The master's son threw a roving bobbin at her; the bobbin hit the girl's head and flew off on to a window, breaking it. The girl was then fined 2*s.* for the broken window.(4) The disciplinary fines inflicted upon shop assistants fall also largely under the head of unpunctuality, and were very often considered unobjectionable. Some instances of vexatious fines were, however, given, but the system varies so much in different shops and in different towns that generalisation is impossible. As a rule unfair fines were not a subject of general complaint in Ireland; one shop in Dublin was an exception. The assistants there stated that a fine of 2*s.* 6*d.* was charged if they spoke to each other, or if they failed to sell an article. In provincial towns in England similar grievances were narrated. One witness said that she was not often fined, but she "dared not let a customer go without buying anything." Another stated that anyone who left

06 (a).]

the counter on account of illness was fined for absence. Fines for various small irregularities were detailed, which, it was stated, were often deducted from the premiums or commissions on sales. If the latter were small, the fine sometimes exceeded the whole amount. In one shop, where the fines were very numerous, one of the most objectionable features of the system was that they were given to the clerk who inflicted them.(1) Corroborative evidence on the subject of fines was given by the secretary of the National Union of Shop Assistants before the Commission. "The shop assistant's life," he said, "is hedged in with a series of fines and impositions by the employer."(2) In Wales the shop assistants alleged that the fines were excessive in amount, too numerous, and unfairly imposed. Over 100 fines are in the rules in some places, and additional private rules inflicting others are also issued. One witness complained that in a house where the private rules for the use of shop assistants contain one against "misleading customers," she had been fined because she said a material would not wash, a statement that in her opinion was perfectly true. Another witness stated that if a certain employer thought that the shop-walkers—whose business it was to impose fines—were too lenient, he would say, "It is your duty to fine for a breach of the rules, and "if you fail to do so I shall fine you for neglecting your "duty." On the other hand, it was stated that fines were really for the advantage of the employées, as the forewoman was thus enabled to deal with small faults. Without fines the offender must be reported, and she would probably be then dismissed at once.(3) The Dressmakers', Milliners', and Mantlemakers' Society, London, states that "there are fines sometimes if workers are late "to business. This varies from the loss of one hour to a "quarter of a day." A Bond Street dressmaker is mentioned who fines any worker who is late 6*d.*, and the money thus procured is divided amongst the punctual workers. Instances of vexatious and oppressive fines were mentioned by Miss James, secretary of the Confectioners' Trade Union. Girls, she said, were fined for "eating "bread and butter, looking out of the windows, talking, "and such trivial offences. . . . I have myself slipped "under my bench or gone round a stack of jam to eat a "piece of bread and butter." "At a firm where the "women are washing bottles, if they pick up a sack to "keep the water off them they are fined." A girl whose wages were 6*s.* a week was fined 1*s.* for some irregularity, and the next day "she was fined 2*s.* 6*d.* because she slipped "down in the dining-room. Then the other girls came "out on strike. . . . When they went back it was "on much better terms, and all fines were abolished."(4)

) *Lon-n con-tionery ade.*

(b.) Fines for damages excited a great deal of discontent amongst many textile operatives, especially amongst the weavers. It was contended in some cases that the fine exceeded the amount of damage done, in others that the damage was not due to the fault of the person on whom the fine was inflicted. Thus, the Yorkshire weavers state that "tuners" are responsible in many cases for the damages for which the weavers are fined. "In one mill a weaver "was fined 6*s.* for the jacquard dropping 10 times. This "was the full piece wage, and the damage was the "tuner's" "fault. The following week the full piece wage, 11*s.* 6*d.*, "was stopped, and again the following week the same "amount also, making in three weeks a total of 29*s.* "These three pieces after they had been 'milled' were "passed as 'perfect,' and the weaver claimed the return of "the money which she had been fined. She was allowed "to buy the first piece on which she had earned 6*s.*, and "on the other two she could only obtain 10*s.* She thus "lost 13*s.* on the three weeks' work although all the pieces "had been passed as perfect, and the original damages "were not her fault."(5) "Fines," said a male weaver, "are given as a rule for circumstances over which the "weaver has no control. For instance, a loom may be "out of order, it makes a thin place or a thick place, as "the case may be, and the weaver is held responsible for "it, although it is the fault of the loom." A weaver was fined 4*s.* 6*d.* for weaving a 3*s.* 6*d.* piece. The fault complained of in this case was what is known as "broken picks," which are due to the state of the weft. She was fined 6*d.* for every broken pick, and the piece contained nine. Thus she was fined the whole of her week's wages, and a shilling from the next week's.(6) At another mill a weaver was fined 11*s.* 6*d.* upon a 15*s.* 8*d.* piece for the same cause. The piece when finished was passed as "perfect," but the money though claimed was not returned.(7) Menders in a certain mill complain that they are fined more than their piece wage for not having mended "hard twined ends," which cannot be seen until after the piece has been dyed, and cannot therefore be seen by the mender. Menders are not shown the piece when a fine is imposed, and when they ask to see it, in order to be satisfied that it is theirs, and that there has been neglect on their part, they are threatened with dismissal.(1) The president of the Dublin United Trades Council stated before the Commission that the girls who worked in a linen weaving factory at Harold's Cross, near Dublin, complained that the fines were "positively unbearable."(2) The fines for damages in the textile industry in the north of Ireland were objected to as both heavy and unfair.(3) In the cloth trade in Trowbridge the method adopted differed from the Yorkshire system, as the weavers' damages are assessed by the menders, and thus a very bitter feeling has been created between these two classes of workers. It appears to be a common custom in the West of England to subtract a sum ranging from 1*s.* to 2*s.* from the price of every piece of cloth after it has passed the weaver. As the actual damage done varies considerably, a standing account is kept against him, and the balance in the weaver's favour is entered against his name as a debt. Such debts frequently amount to 2*l.* or 3*l.* The amount of damage is calculated after it has passed the mender, and the weavers complain that they never know what sum is standing against them in the books, or for what faults they have been fined.(4) In Lancashire it appears that the fines for damages are as a rule lighter than in Yorkshire, though they are not always lighter in proportion to the value of the cloth. In every district weavers complained of fines inflicted for what is known as "black oil," that is, for cloth stained during the process of weaving, by oil dropping from some part of the loom. The employers admit that the stains may not have been caused by any carelessness on the part of the weaver, and the weavers state that the damage is seldom due to their neglect, but is more frequently caused by the condition of the "pricking band," for which the "tackler" should be held responsible. "The "weavers further state that, when the oil supplied is of an "inferior quality, it is impossible to prevent it 'flying' on "to the cloth. At a number of mills they are allowed "to wash out the oil stains at their own cost, and at "a few mills this is done at the cost of the firm."(5) In the case of barmaids and waitresses it was stated that no fixed custom prevailed with regard to payment for breakages. Some witnesses declared that they always had to pay 2*s.* a week whether anything was broken or not, and others stated that they had to pay for all breakages, whether or not they were due to their carelessness. "Unavoidable accident was no excuse." On one occasion a large shelf of glasses, and a pier glass, were thrown down by the vibration of a goods train during the night, and 2*s.* each was levied from every girl in the station bars.(6) In some East End confectionery and goods factories it was stated that the fines for damages were both heavy and unfair. If a girl were labelling a bottle of jam which was cracked and it broke in her hands, she would have to pay the full price for it, although the jam would be used afterwards. One girl at a drysalter's who was earning 5*s.* a week, had to pay 7*s.* for damages; it was stopped out of two or three weeks' pay. Accidents occurred "because the girls had to carry "very heavy weights, and had to go backwards. If there "is any oil or anything on the floor, they are apt to slip "down, and for all accidents they have to pay, and at full "prices, out of their wages."(7) The five London branches of the Laundresses' Union mention fines "for 'damage' often "not the worker's fault."(8)

[§ 706 (b.)]

) *Fines for mages.*) *Textils brics.*

(ii.) *Barmaids and waitresses.*

707. Various complaints are made with regard to deductions. In some cases it is stated that the deductions are in themselves unfair, in others that an undue amount is deducted, in others, again, that a certain amount of work is not paid for. The further complaint that such insufficient or false particulars are supplied that it is impossible to estimate the real wage is dealt with under the heading Inspection. Deductions which are made in some parts of the textile industries of England for the renewal and repair of brushes and oil cans, damage to the machinery, and for the oiling of looms, are much resented. It is urged that the quality of brush supplied is so poor that it cannot last for the time expected by the employers, and that as the operatives are obliged to oil the machinery while it is in motion, it is impossible to avoid occasional accidents. The charge for oiling the looms is also objected to as unjust in itself, and the weavers are of opinion that they might with

Deductions.

For extra service.

[§ 707.] equal right be charged for the oiling of the engine which runs the looms or for the wages of the tackler who attends to them.(1) They further contend that the weekly levy of ½*d.* per loom is considerably in excess of the wages paid to the oiler, who is, morever, engaged upon other work for the firm for the greater part of his time. A similar complaint is made by the tailors and tailoresses at Glasgow. A certain sum is deducted from the price paid for the making of each garment for "machinery." Theoretically, this sum goes to pay the "wages of the women machinists, "the cost of the thread, and the upkeep of the sewing "machine." Practically, the sum deducted for this purpose would appear to be disproportionate. On an average, it is stated, an employer takes 4*s.* per week off the wages of every man employed in his shop. In a third-class shop, 20 men may be employed, therefore, 4*l.* would be deducted. For 20 men, two women machinists may be kept who are paid 15*s.* a week. Hence by this system of deduction a profit of 50*s.* is made. It was noted that the women, and more especially the members of the Tailoresses' Union, consider that they are used in this way as a means of unfair deductions from the men, and from *esprit de corps* they object to the practice.(2) Great complaints were made by some workers about deductions for materials used. One witness stated that workers in the umbrella trade suffered large deductions in their gross earnings on this account. She quoted two instances, in which 41*s.* and 19*s.* respectively had been earned in a fortnight, and 6*s.* and 3*s.* 3*d.* had been deducted for thread. In a certain department in the manufacture of sewing-machines it was stated that the workers earn from 9*s.* to 10*s.* a week. Out of this wage they pay from 9*d.* to 1*s.* 6*d.* a week for oil, pumice, rags, and flint.(3) In this case it was observed that so much was wasted before this rule came into force that some check had to be instituted. The employer of the umbrella makers explained that as he required a very good quality of thread for his work, he insisted on his workers buying it from himself, as otherwise they purchased an inferior kind. No explanation, however, was offered as to why the workers should be required to pay for the thread, any more than for the material itself, though both cases point to the necessity of some check on the use of inferior material and the tendency to wastefulness. Such deductions for material are very common in home industries, especially in connection with the clothing and tailoring trade, as for instance in a case already quoted where trousers were finished for 3*d.* a pair, out of which 1*d.* was deducted for thread and twist.(4) Presumably the payment for the work is raised to cover the cost of the extra material necessary, but the above case hardly supports this theory. Apart from the question of the equity of such deductions in themselves, one objection that applies to the system, whether it takes the form of deduction for materials or for extra labour involved, somewhat resembles that raised against the truck system. Under the truck system it is very difficult for the worker to ascertain whether the wages paid in kind are exactly equivalent to their nominal money value. Under the deduction system it is very difficult for the worker to determine whether the amount deducted for material or extra service is exactly equivalent to the actual cost incurred by the employer.(5) Compulsory deductions for "the infirmary" or for "medical attendance and physic," or for "compulsory sick club" were mentioned in a few cases. The secretary of the Confectioners' Union stated that "in most factories they have 1*d.* payments for the hospital and the doctor stopped out of their wages." Sometimes these compulsory deductions were considered a grievance, and the medical attendance was complained of.(6)

or materials.

Many cases were mentioned in the textile industry of the difficulty of calculating wages which appear to come under the operation of clause 24 of the Factory and Workshop Act of 1891.* Several instances were brought forward in other trades not thus protected, of payment for less work than was actually done. Evidence was obtained from a Trades Union official who was not in the pen trade, and from women who worked in certain pen factories in Birmingham, that a strong suspicion existed amongst the pen-makers "that they were given more "work to do than formerly for the same pay. It was stated "that they were paid by the 'lot'; this was supposed to be "such a weight of metal as would give 100 gross of pens, "but neither the weight nor the number was stated to the "girls. They believed that the weight was increasing, and "that they were now making many more gross to a 'lot' "than before."(1) A lace-worker who earns only 3*s.* a week by "beading frilling," stated that one yard extra was put into each roll of a dozen and not paid for.(2)

[§ 707.]

708. As regards the alleged system of truck in the straw hatmaking industry, several women stated that they bought their plait where they chose, and were under no compulsion of any kind to buy it from the merchant or manufacturer who bought their hats. Others said the same thing, but added that if their customer obliged them by buying their hats, they liked to oblige him by buying his plait.(3) Undoubted breaches of the Truck Act occur in the hosiery trade at Nottingham. Much of the work is done by outworkers, through middlemen and middlewomen, who pay only in kind. "The quality of the goods sold and "the prices charged compare unfavourably with the "goods and prices in other shops. Thus the truck "price for tea was 2*d.* per ounce, and the ordinary price "¾*d.* per ounce; the truck price for bacon was 9*d.* per "pound, the ordinary price 6*d.*" The workers further stated that the truck system is not confined to provisions, and that if they succeed in securing money, their wages are calculated at a lower rate than if they accept goods. A hand seamer who was visited stated that she earns 7½*d.* and 8*d.* per dozen pairs of stockings. She receives no money payment, and all goods at the middlewomen's shop are dearer than elsewhere; flannel, for example, costs 5*d.* a yard more.(4) Another breach of the Truck Act is reported from the north of Ireland in the linen manufacturing district. A certain firm keep a shop in which provisions, clothing, hardware, and other things are sold, and at which the workpeople are obliged to spend their wages. A foreman who gave evidence on the subject stated that he had been obliged to dismiss three workpeople for buying goods at other shops in the village.(5)

Truck system.

709. In the jute trade in North Scotland considerable exception is taken by the women operatives to the "bounty" system, *i.e.*, the premium that is paid on production over and above a certain quantity. This is known among mill-workers as "overspin." It was alleged that advantage was sometimes taken of this system to pay at a lower rate, while production is forced up by overdriving in order to get the premium. The statement was made that in one factory "there was a tacit understanding that the "weavers should clean their looms and do other things "pertaining to their work during meal hours in order to "take off a certain amount of cloth. If they failed in this "way they incurred a risk of being dismissed by the tenter, "who was paid a premium on production." A tenter and a man of large experience stated that the children employed as half-timers are frequently overdriven if not beaten in mills where the premium, popularly known as "blood-money," on production is given. "The little craters are harder wrocht than iver they were," said another witness.(6) The same complaint was made by a male weaver from South Lancashire who represented the Burnley Weavers' Association. The practice was there called "driving." As a "poundage" on the output is paid to the "overlookers," those who do not produce the requisite amount are liable to be abused or dismissed. The result is that "those who are physically weak and perhaps not so "able as others to follow up so keenly have to fall out of "the race." "It often causes . . . young persons "and females . . . . a great amount of anxiety and "trouble." It was further stated that where the employer paid a higher rate of poundage there was far less driving.(7)

Bounty system.

(1) p. 115. (2) p. 268. (3) pp. 277, 279. (4) p. 79. (5) This point can be illustrated by reference to an incident which has recently taken place. It appears that Miss Abraham, recently appointed Sub-Inspector under the Home Office, prosecuted the owners of a jute factory for a breach of the Truck Acts, on account of the fines and deductions levied on the workpeople. She based her prosecution on the clause in the Act which provides that the entire amount of the wages earned by an artificer shall be paid in coin of the realm. The defence was based on a decision of Justices Matthews and Grantham, and the stipendiary magistrate gave the case against the Home Office, although he admitted that he personally inclined to the Sub-Inspector's reading of the law. An appeal against this decision has now been made to a higher court.—("Women's Trade Union Review," October 1893, p. 12.) (6) Reports, pp. 99, 235, Group C., Minutes, Vol. I., Miss James, 8433–63; Answers to Schedules of Questions, Group C., p. xliii.

* It is enacted that "sufficient particulars" shall be supplied to enable the worker to "calculate the rate of wages." It is contended that this clause is evaded in many places, and that insufficient, fraudulent, or even no particulars are supplied in various cases, pp. 99, 106, 107, 111, 115, 143, 175, 298, 301, 302, 324.

(*a*) TABLE of WAGES EARNED by WOMEN in the COTTON INDUSTRY, 1891–2.

(Arranged in descending order.)

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Reports, &c., pp. 119–29 - Minutes of Evidence, Group C., Wilkinson, 1682, 1705; Birtwistle, 1503, 1508–9; Rawlinson, 2869–71.	Weavers - -	Lancashire and Cheshire.	20 2	This estimate is determined from tables giving 183 different averages, which vary from 4*s.* to 9*s.* 6*d.* for a single loom. In some instances the average per loom was given as such. Where the average was said to vary between certain specified limits the arithmetic mean has been taken. In these reports the average number of looms worked per woman is not stated. In the evidence, Mr. Birtwistle stated that the number of looms varied from two to six (*i.e.*, average four). Mr. Rawlinson estimated that the average number of looms run in the district of Burnley was 3·9. It was also stated by Mr. Wilkinson that in the district of Haslingden the number of looms worked per week was four on an average. The average weekly wage for cotton-weavers in Lancashire and Cheshire has therefore been taken to be 4 × 5*s.* 0·5*d.* (average per loom), *i.e.*, 20*s.* 2*d.* It may be noted in corroboration of this result that the weekly wages in Burnley were stated by Mr. Birtwistle to average 20*s.*, and Mr. Rawlinson gave the average weekly wage as 21*s.* These averages are in almost exact agreement with the estimate given in the table.
Answers to Schedules of Questions, Group C., p. 99.	Spinners - -	Oldham	16 10	The wages for a skilled datal hand and for a datal hand as feeder were stated to be 9*s.* 4*d.* and 17*s.* 7*d.* per week respectively. On piece work, females, heavy frame coupled, receive 1*l.* 0*s.* 2*d.* per week; single frame, 19*s.* 5*d.*; one heavy and one light frame coupled, 19*s.* 5*d.*; light frame coupled, 18*s.* 4*d.*; light frame single, 13*s.* 11*d.* The arithmetic mean of these averages is given in the table.
Reports, &c., pp. 119–29 -	Card-room	Lancashire and Cheshire.	15 0	This estimate was obtained from 105 different averages. In some cases the average was given as such. Where wages were said to range between certain specified limits the arithmetic mean has been taken.
Reports, &c., p. 193 -	Spinners - -	Bridgeton - (Glasgow).	14 7	The average wages of spinners in two factories employing respectively about 680 and 240 workpeople were given as 14*s.* 9*d.* and 14*s.* 6*d.* The arithmetic mean has been taken.
Reports, &c., pp. 119–29 -	Winders - -	Lancashire and Cheshire.	14 3	This estimate was determined from 24 different averages varying from 10*s.* to 18*s.* 6*d.* In some instances the average was given as such. Where wages were said to vary between certain specified limits the arithmetic mean has been taken as before.
Reports, &c., p. 191 -	Weavers - -	Lanark - -	14 0	The wages of weavers were said to average 14*s.* a week.
Reports, &c., p. 191 -	Winders - -	„ - -	13 0	The wages of winders were said to vary from 12*s.* to 14*s.* The arithmetic mean has been taken.
Reports, &c., p. 193 -	Card-room workers	Bridgeton	12 3	The wages of card-room workers were stated to average 12*s.* 6*d.* and 12*s.* respectively in two factories. The arithmetic mean has been taken.
Reports, &c., pp. 190–1 -	Calico-weavers -	Kilmarnock -	11 0	The wages were said to vary from 10*s.* to 12*s.* The arithmetic mean has been taken.
Reports, &c., p. 191 -	Cotton-spinners -	Lanark - -	10 0	In a factory employing about 400 people the wages of spinners were said to average 10*s.*
Reports, &c., p. 190 -	„ -	Johnstone -	10 0	The wages of spinners were said to vary from 8*s.* to 12*s.* The arithmetic mean has been taken. Several workers confirmed the wage average given by employers.
Reports, &c., p. 190 -	Card-room workers	„ -	9 0	Wages were said to vary from 6*s.* to 12*s.* The arithmetic mean has been taken. In this case also the employers' averages were confirmed by the workpeople.

* These means are in some cases probably not far from true averages, but in other cases they diverge. The nature of the Returns in each case is indicated in the Remarks.

§ 710 (b.)] (b) TABLE of WAGES EARNED by WOMEN in the WOOLLEN INDUSTRY, 1891-2. [§ 710 (b.)]

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. *d.*	
Reports, &c., pp. 299-300 - Minutes of Evidence, Group C. Wilson, 7497-7511.	Weavers - -	South Scotland	18 1	This wage is the arithmetic mean of 15 different averages obtained from the Report. These averages were, in some instances, given as such; in others, wages were said to vary from 16*s.* to 20*s.*, 17*s.* to 20*s.*, 16*s.* to 19*s.* or 20*s.*, &c. In these cases the arithmetic mean has been taken. In one instance wages were said to vary from 17*s.* to 18*s.* in busy times, and from 14*s.* to 15*s.* in slack times. The wage has in this instance been taken to be the arithmetic mean between 17*s.* 6*d.* and 14*s.* 6*d.*, *i.e.*, 16*s.* In another instance the rate for fast looms was said to vary from 15*s.* to 25*s.*, and for slow looms from 15*s.* to 20*s.* The wage has been taken as the mean between 20*s.* and 17*s.* 6*d.*, *i.e.*, 18*s.* 9*d.* It may be noted that in the evidence before the Commission, Mr. Wilson stated that the wages of skilled women lie between 20*s.* and 24*s.*, and of unskilled women, between 10*s.* 6*d.* and 14*s.* The arithmetic mean of these rates is 17*s.* 1½*d.* This average only slightly differs from the mean between the wages of weavers and winders, *i.e.*, 16*s.* 10*d.*
Reports, &c., pp. 299-300 -	Winders -	„	15 9	This wage is the arithmetic mean of six different averages obtained from the Report. These averages were, in some instances, given as such. Where the rates were said to vary between certain specified limits the arithmetic mean has been taken.
Reports, &c., pp. 103-5 - Digest, Group C., Vol. I., p. 19. Minutes of Evidence, Group C., Gee. 4835; Thomson, 7079.	Weavers - -	Huddersfield -	14 5	This wage is the arithmetic mean of 27 different averages obtained from the Report. These averages vary from 7*s.* to 20*s.* (full-time average). In some instances the averages were given as such, but where wages were said to range between certain specified limits the arithmetic mean has in all cases been taken. It may be noted that in the evidence given before the Commission, the wages of women weavers were said to be from 15 to 30 per cent. less than those of men weavers, and sometimes even lower. The average wage of men weavers was given as 17*s.* 6*d.* The average wage of the women would therefore be probably somewhat lower than 13*s.* 6*d.* Mr. Thomson stated, however, that the average wages of women weavers varied from 16*s.* to 17*s.* The arithmetic mean between 16*s.* 6*d.* and 13*s.* 6*d.* is 15*s.*, which differs but slightly from the estimate obtained from the Lady Sub-Commissioners' Reports.
Reports, &c., pp. 184-5, 190-1	„ - -	West Scotland -	13 7	This estimate is obtained from different averages for weavers in Glasgow; the carpet industry, Ayr; shawl and tweed weaving, Alva; and woollen weavers, Kilmarnock. In some instances the actual average was given; in others, wages were said to vary between certain specified limits. In these cases the arithmetic mean has been taken. It may be noted that in several cases the averages given by the employers were confirmed by the workers themselves. In the carpet factory of Ayr, on the other hand, the employers stated that wages varied from 10*s.* to 15*s.*, and the employed from 5*s.* to 12*s.* In the opinion of the Sub-Commissioner the latter estimate was judged to be more correct; 8*s.* 6*d.* has therefore been taken in this instance.
Reports, &c., pp. 109-10 -	„ - -	Halifax - -	13 7	The rates of wages in four instances were said to be 10*s.*, 13*s.* 10*d.*, 14*s.* 5*d.*, and 16*s.* (full time) respectively. The arithmetic mean of these rates has been taken.
Reports, &c., pp. 110-12 -	„ - -	Leeds - -	13 6	This estimate is the mean of 26 different rates of wages varying from 10*s.* to 17*s.* 3*d.* In some instances, as before, the average was given as such. Where wages were said to vary between certain specified limits the arithmetic mean has been taken. In a few instances the full-time averages only were given. Where the averages were given both for full and slack times the arithmetic mean has been taken.
Reports, &c., pp. 106-9 - Digest, Group C., Vol. I., pp. 20, 24, 28. Minutes of Evidence, Group C., Arnold-Forster, 6463 9742-4, 11,381; Foster, 6642 Wilson, 11,429.	„ - -	Bradford -	12 1	The wages given are the arithmetic mean obtained from 27 different averages, which vary from 6*s.* 4*d.* to 16*s.* In some instances the average was given as such. Where wages were said to vary between certain specified limits the arithmetic mean has been taken in every case. Sometimes the average was stated to be the full-time average. Sometimes the general average was given, but in the majority of cases this point was not mentioned. It would appear that there has been a fall in wages in late years. In three instances where wages were said to average at the present time 11*s.* 6*d.*, 12*s.*, and 14*s.* respectively, the corresponding former averages were 20*s.*, 15*s.* 6*d.*, and 19*s.* The evidence given before the Commission on weavers' wages in this district was of a contradictory nature. Men, it appears, are paid at the same rate as women. Messrs. Turner and Drew stated that the average wage of weavers was 11*s.* 9*d.*, or 9*s.* a week allowing for slack time. Mr. Arnold-Forster stated that the average during the last year was 14*s.* 6*d.* "including all holidays, and stoppages, and breakdowns, and feasts, and everything." Mr. Foster, also an employer, estimated the average during the last four years at 12*s.* 7½*d.* Mr. Arnold-Forster, when recalled, added "I do not think either side has figures to go upon; he only gives us his personal impression, and we only state our personal impression." This witness later obtained statistics of the actual wages paid, and stated as a result that the wages of weavers averaged 13*s.* 3·84*d.* per week. The returns with regard to wages on which this estimate was based were not, however, complete, and Mr. Wilson stated: "I "do not doubt the returns which have come; I simply wish for those "that have not come, which are far below those which have come." It may be noted that the arithmetic mean between 13*s.* 3·84*d.* and 11*s.* 9*d.* (Mr. Wilson's average) is about 12*s.* 6*d.* This differs but slightly from the estimate given in the table.
Reports, &c., pp. 106-9 - Digest, Group C., Vol. I., p. 24. Minutes of Evidence, Shaftoe, 5876; Marran, 5951.	Wool-combers -	Bradford	11 9	This estimate is the mean of five rates varying from 11*s.* to 12*s.*, which were given as the average for wool-combers. It may be noted that this was confirmed by the oral evidence. One witness stated that wages averaged 12*s.*, and another that they varied from 10*s.* to 13*s.*, of which the arithmetic mean is 11*s.* 6*d.* The mean thus obtained is 11*s.* 9*d.*
Reports, &c., pp. 346-7 -	Weavers - -	Ireland -	11 6	This estimate is determined from five different averages varying from 8*s.* 6*d.* to 14*s.* In two cases the average was given as such; in the others, where wages were said to vary between certain specified limits, the arithmetic mean was taken.
Reports, &c., pp. 110-2 -	Rag-sorters -	Leeds - -	11 3	This estimate is the mean obtained from seven different rates of wages varying from 5*s.* 6*d.* to 13*s.* 6*d.* In some cases the average was given as such. Where wages were said to vary between certain specified limits the arithmetic mean has been taken. In one instance the limits given were stated to be those for full-time employment; in the others this point was not mentioned.

[§ 710 (b.)]

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. *d.*	
Reports, &c., pp. 145–6	Weavers	West of England.	10 11	This estimate is the mean obtained from 21 different rates of wages varying from 8*s.* to 15*s.* In every case but one the average was given as such. In the case in which wages were said to vary between specified limits the arithmetic mean has been taken. In half the instances the averages given were those for full time.
Reports, &c., pp. 109–10	Winders	Halifax	10 10	This is the mean obtained from five different rates of wages varying from 8*s.* 6*d.* to 13*s.* 6*d.* In every case but one the average was given as such. In the instance in which wages were said to vary between specified limits the arithmetic mean has been taken as the average.
Reports, &c., pp. 106–9	Winders	Bradford	10 6	This is the mean of two rates of wages, viz., 9*s.* and 12*s.* In the latter case wages were said to vary between 10*s.* and 14*s.*, and the arithmetic mean has been taken as the average. In the former case the average was given as such.
Reports, &c., p. 238	Flannel, shawl, tweed workers.	Wales	10 5	This was obtained from statistics with regard to the weekly wages earned by 433 women in woollen shawl, tweed, and hosiery factories. The wages of 62 did not exceed 7*s.*; of 64 exceeded 7*s.*, but under 8*s.*; the wages of 82 were between 8*s.* and 9*s.*; of 90 were between 9*s.* and 12*s.* 6*d.*; of 111 between 12*s.* 6*d.* and 15*s.*; and of 24 between 15*s.* and 1*l.* The aggregate amount of wages earned has been determined by multiplying the number of women receiving certain rates of pay by the arithmetic mean of those rates. The total thus obtained has been divided by the number of women employed, and the result has been taken as the average.
Reports, &c., pp. 103–5	Winders	Huddersfield	10 2	This is the mean obtained from three rates, 8*s.*, 10*s.*, and 12*s.* 6*d.*, given as the average wages of winders.
Reports, &c., p. 185	,,	West Scotland	10 0	This is the mean obtained from five rates of wages. In three cases 10*s.* was given as the average; in the others wages were said to vary from 11*s.* to 12*s.* and from 8*s.* to 9*s.* respectively. In these cases the arithmetic mean has been taken. It may be noted that in one instance the statistics given by the employer were confirmed by the workers.
Reports, &c., pp. 106–9 Digest, Group C., Vol. I., p. 28. Minutes of Evidence, Foster, 6642, 6752; Watson and Sutcliffe, 10,348–49.	Spinners	Bradford	9 1	This is obtained from nine different averages varying from 7*s.* 6*d.* to 10*s.* 6*d.* In most cases wages were said to vary between certain specified limits, and the arithmetic mean has been taken. It was stated in the oral evidence that the wages of spinners vary, according to the number of sides minded, from 8*s.* 6*d.* to 11*s.* 6*d.*, full time. The mean would therefore be 10*s.* This is, however, for full-time, and this may account for the difference between this and the estimate given in the table.
Reports, &c., pp. 109–10	,,	Halifax	9 1	This is obtained from three averages, which vary from 8*s.* 3*d.* to 10*s.* 6*d.* In one instance the average was given as such; in the others wages were said to vary between certain specified limits, and the arithmetic mean was taken.
Reports, &c., pp. 145–6	,,	West of England.	8 2	This is obtained from five different averages, which vary from 6*s.* to 9*s.* 6*d.*
Reports, &c., pp. 110–2	,,	Leeds	7 6	Wages were in one instance said to vary from 4*s.* to 10*s.* In another the average was stated to be 8*s.* The arithmetic mean between 7*s.* and 8*s.* was taken.
Reports, &c., pp. 346–7	,,	Ireland	6 0	Wages were in one case said to vary from 5*s.* to 7*s.*, and in another case from 4*s.* to 8*s.* The arithmetic mean has been taken.

(c) TABLE of WAGES EARNED by WOMEN in MISCELLANEOUS TEXTILE INDUSTRIES, 1891–2.

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. *d.*	
Reports, &c., p. 187	Linen-winders	Dunfermline	17 6	Miss Irwin stated that the ordinary wage of winders ran from 17*s.* to 18*s.*, although numbers make considerably more in busy seasons.
Reports, &c., p. 187	Linen-weavers	,,	16 0	The ordinary wages of weavers were stated to run from 15*s.* to 17*s.* per week, although numbers make considerably more in busy seasons. The arithmetic mean has been taken.
Answers, &c., Group C., p. 103. Minutes of Evidence, Group C., Roy, 11,367.	Jute and linen winders.	Forfar	15 6	The wages of warp and weft winders were stated to be 17*s.* and 14*s.* respectively. The arithmetic mean has been taken.
Reports, &c., p. 190	Flax spoolers and reelers.	Johnstone	15 6	The wages of spoolers and reelers were stated to vary from 15*s.* to 16*s.* The arithmetic mean has been taken. It may be noted that the wage averages given by employers were confirmed by several workers.
Minutes of Evidence, Group C., Hadwen, 6944.	Silk-preparers	Halifax	15 0	
Reports, &c., p. 184	Carpet-weavers	Glasgow	15 0	In a factory where 600 people were employed the wages of weavers were said to average 15*s.* a week.
Reports, &c., p. 325	Poplin	Dublin	14 6	The wages earned were stated to vary from 9*s.* to 1*l.* a week. The arithmetic mean has been taken. It may be noted that the workers are unemployed during four months in the year.
Minutes of Evidence, Group C., Roy, 11,367.	Jute and linen weavers.	Forfar	14 5	The average wages of weavers were obtained from six different averages varying from 10*s.* 6*d.* for two looms (8*s.* to 13*s.*) to 18*s.* for four looms. In some instances the average was given as such. Where wages were said to vary between certain specified limits the arithmetic mean has been taken.
Reports, &c., pp. 307–9	Jute-weavers	North Scotland	14 3	This is determined from 13 different averages varying from 11*s.* to 17*s.* 9½*d.* In some instances the average wage was said to vary between certain specified limits, and the arithmetic mean was taken. In other instances the averages were given for single and double looms, and for broad and narrow looms, and the arithmetic mean between the different rates given was again taken.
Minutes of Evidence, Group C., Wates, 12,547–8.	Worsted-spinners	Leicester	14 3	This is the arithmetic mean between the average or time workers' *i.e.*, 11*s.* 9*d.* (10*s.* 6*d.* to 13*s.*), and piece workers, *i.e.* 16*s.* 9*d.* The average for piece workers, whose wages varied from 13*s.* 6*d.* to 20*s.*, include those of preparers, spinners, doublers, and reelers.

[§ 710 (c.)]

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Reports, &c., p. 184	Carpet-winders	Glasgow	14 0	In a factory where 600 people were employed the wages of winders were stated to average 14*s*.
Reports, &c., pp. 307-9	Jute-winders	North Scotland	13 7	This is determined from fourteen different averages, which vary from 11*s*. 10½*d*. to 15*s*. In some instances the average was given as such. Where it was said to vary between certain specified limits the arithmetic mean was taken as the average.
Minutes of Evidence, Group C., Southwell, 15,452.	Carpet-weavers	United Kingdom.	13 6	The wages of weavers in the carpet industry were stated to vary from 12*s*. to 15*s*. The arithmetic mean has been taken.
Reports, &c., pp. 308-9	Linen-winders	North Scotland	12 11	This was determined from six different averages varying from 11*s*. 10*d*. to 15*s*. 5*d*. Generally speaking the rates were given separately for warp and weft winders, and these were stated to range between certain specified limits. The arithmetic mean of the rates given has in each case been taken.
Reports, &c., pp. 308-9	Linen-weavers	„	12 3	This was determined from six different averages varying from 10*s*. to 13*s*. 6*d*. In some instances two or three different rates of wages were given, and the arithmetic mean of these rates was taken. In one instance three rates were given for single looms (varying from 8*s*. 9*d*. to 12*s*. 11½*d*.), three rates for double looms (varying from 9*s*. 1½*d*. to 17*s*.), three rates for treble looms (varying from 15*s*. 7½*d*. to 17*s*. 0½*d*.). The arithmetic mean of these nine rates has been taken.
Reports, &c., p. 192	Thread-spinners	Paisley	11 2	In one factory, employing 3,200 workpeople, the wages of spinners were stated to average 9*s*. In the spinning department of another factory, employing between 3,500 and 4,000 workpeople, the wages of two-thirds of the workers were stated to average 14*s*., and the remainder 12*s*. (*i.e.*, an average of 13*s*. 4*d*.). The arithmetic mean between 9*s*. and 13*s*. 4*d*. has been taken for the estimate in the table.
Reports, &c., pp. 307-9	Jute-spinners	North Scotland	11 2	This was determined from 16 different averages varying from 10*s*. to 12*s*. 6*d*. In some instances the average was given as such; in others it was said to vary between certain specified limits, and the arithmetic mean was taken. Where the rates were given for single and double frames the arithmetic mean between these rates was taken.
Reports, &c., p. 140	Carpet-weavers	Kidderminster	11 0	The average wage earned by weavers of Turkey carpets was 12*s*.; of Axminster rugs and chenille, 11*s*.; of ordinary rugs and chenille, 10*s*. The arithmetic mean of these three rates has been taken.
Reports, &c., p. 193	Flax-weavers	Port Glasgow	11 0	In a factory employing 240 workpeople the wages of weavers were said to vary from 10*s*. to 12*s*. (piece work). The arithmetic mean has been taken.
Reports, &c., p. 352	Jute-spinners	Ireland	10 9	In one factory it was stated that 10*s*. could be earned by spinners and weavers when on full time. In another factory weavers can earn 3*s*. to 3*s*. 6*d*. a loom, and work three or four looms. The average wage in this factory has been taken to be 3*s*. 3*d*. multiplied by 3½. The figure given in the table is the arithmetic mean of these averages.
Reports, &c., p. 184	Carpet-weavers	Ayr	10 6	The employers stated that wages varied from 10*s*. to 15*s*.; the employed from 5*s*. to 12*s*. The average given by the employers would thus be 12*s*. 6*d*., while the average given by the employed was 8*s*. 6*d*. The arithmetic mean between these rates has been taken. It may be noted that Miss Irwin stated that "the evidence inclined "one to accept the latter figures as indicating the ordinary rates, "although there was evidently a great rise or fall according to the "supply of work at the factory."
Reports, &c., p. 190	Flax-reelers	Kilbirnie	10 6	The wages of reelers were said to vary from 9*s*. to 12*s*. The arithmetic mean has been taken. The figures given by the employers were confirmed substantially by several workers, who, however, stated that a large proportion of the girls could not make so much.
Reports, &c., p. 186	Hosiery-workers	Dalry	10 5	In a hosiery factory at Dalry three-fourths of the workpeople were stated to earn from 9*s*. to 13*s*. a week, and one-fourth 8*s*. to 9*s*. 6*d*. The mean of these rates has been taken.
Reports, &c., pp. 307-8	Flax-reelers	North Scotland	10 5	The wages of flax-reelers were determined from four different averages varying from 8*s*. 6*d*. to 12*s*. 6*d*. In some instances the average wage was given as such. Where wages were said to vary between certain specified limits the arithmetic mean has been taken.
Reports, &c., pp. 307-8	Flax-spinners	„	10 4	This was determined from four different averages varying from 9*s*. 6*d*. to 11*s*. 3*d*. Wages were in each case said to vary between certain specified limits, and the arithmetic mean was taken.
Reports, &c., pp. 341-5	Linen-weavers	Ireland	10 4	This was determined from 31 different averages, which vary from 5*s*. 5½*d*. to 14*s*. Twenty-nine of these averages were determined from the tables. In some instances the average was given as such, but generally speaking the wages were said to vary between certain definite limits, and the arithmetic mean was taken. One average was obtained from a factory at Belfast, where the wages of weavers were said to vary from 7*s*. to 20*s*. The arithmetic mean was taken. In a linen factory in the South of Ireland the wages of weavers vary from 6*s*. to 15*s*. (*i.e.*, average 10*s*. 6*d*.).
Reports, &c., pp. 137-9	Silk-weavers		10 3	This is determined from 14 different averages varying from 6*s*. to 16*s*. In some cases the average was given as such. In others, wages were said to vary between certain specified limits, and the arithmetic mean was taken. Where these limits were given both for slack time and full time the mean was again taken. Sometimes the average was stated to be the full time average, but generally speaking this point was not mentioned.
Reports, &c., p. 140	Carpet-winders	Kidderminster	10 1	This was determined from six different averages, varying from 8*s*. to 12*s*. Generally speaking the average was given as such, but in the two cases where wages were said to vary between certain specified limits the arithmetic mean was taken.
Minutes of Evidence, Group C., Simmons, 15,258.	Silk-trimmers	East London	10 0	Mr. Simmons stated in connexion with this average that it was "not "a fair average, because the average is subject to variation of "fashion."

[§ 710 (c.)]

Reference.	Class of Work	District	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Minutes of Evidence, Group C., Bean, 12,240–4.	Linen-weavers -	Brechin	10 0	This was stated to be the average for two looms.
Reports, &c., pp. 307–8 -	Flax-preparers -	North Scotland	9 10	This was determined from four different averages, varying from 9*s.* 1½*d.* to 10*s.* 9*d.* In one case the average was given as such; in the others, wages were said to vary between certain specified limits, and the arithmetic mean was taken.
Reports, &c., p. 193 -	Flax-spinners -	Port Glasgow -	9 9	The wages of spinners in a factory where 240 people were employed were said to vary from 9*s.* 6*d.* to 10*s.* (time). The arithmetic mean has been taken.
Reports, &c., p. 190 -	„ -	Kilbirnie - -	9 9	The wages of spinners in a factory where more than 800 people were employed were said to vary from 9*s.* to 10*s.* 6*d.* These figures, given by the employers, were confirmed by several workpeople.
Reports, &c., p. 190 -	„ -	Johnstone -	9 0	The wages of spinners in a factory where 1,000 workpeople were employed were said to average 9*s.* Several workers confirmed the wage-averages given by the employers.
Minutes of Evidence, Group C., Ritchie, 12,478–12,484; Mrs. Hicks, 12,512.	Jute-spinners -	East London -	8 11	Mr. Ritchie stated that the average wage of spinners in East London was 10*s.* Mrs. Hicks stated that they varied from 7*s.* 4*d.* to 8*s.* 4*d.* (*i.e.*, average 7*s.* 10*d.*), but she added, "If they work very hard they cannot take more than 10*s.*" The estimate given in the table is the arithmetic mean between 10*s.* and 7*s.* 10*d.*
Minutes of Evidence, Group C., Taylor, 13,288.	Linen-lappers -	Ireland (chiefly Belfast).	8 6	——
Reports, &c., pp. 137–9 -	Silk-winders -	- - -	8 3	This is obtained from 22 different averages varying from 5*s.* 6*d.* to 10*s.* 6*d.* In some instances the average was given as such. Where the average was stated to vary between certain specified limits the arithmetic mean has been taken.
Reports, &c., p. 141 -	Fustian and velvet cutting.	- - -	8 3	This was obtained from 10 different averages varying from 7*s.* 6*d.* to 9*s.* 6*d.* In one instance the average was given for long and short frames, and the arithmetic mean was taken.
Reports, &c., pp. 341–5 -	Linen-winders -	Ireland - -	8 3	The wages of warp and weft winders were determined from 24 different averages varying from 6*s.* to 11*s.* 6*d.* The average was in some cases given as such. Where wages were said to vary between certain specified limits the arithmetic mean has been taken. In some instances the wages of bobbin-winders, hank-winders, cotton-winders, and quill-winders, were given separately, and the average of these separate classes of winders was taken to represent the average for winders as a whole. In a typical factory in Belfast the average wage of winders and warpers was 10*s.* 1½*d.*, and in South Ireland 7*s.* 1½*d.*
Reports, &c., pp. 341–5 -	Linen-spinners -	„ - -	8 0	The mean wage of spinners was determined from 12 different averages, which vary from 5*s.* 9*d.* to 9*s.* 3*d.* Generally speaking wages were said to vary between certain specified limits, and the arithmetic mean was taken, but in a few instances the average was given as such. In a typical factory in Belfast the wages of spinners varied from 5*s.* 9*d.* to 12*s.* (*i.e.*, average of 8*s.* 10½*d.*); in South Ireland they varied 4*s.* to 8*s.* 6*d.* (*i.e.*, average of 6*s.* 3*d.*).
Reports, &c., p. 144 - -	Shoddy and flock manufacture (Sorters).	West of England	7 6	This was determined from three different averages varying from 6*s.* 6*d.* to 8*s.* In one case the average was given as such. In the others, wages were said to vary between certain specified limits, and the arithmetic mean was taken.
Reports, &c., p. 183 -	Worsted factory -	Ayr - -	5 10	In this factory wages were said to run from 4*s.* 6*d.* to 8*s.* 6*d.*, one-third of the workers earning 4*s.* 6*d.* Two-thirds of the workers were therefore calculated to earn 6*s.* 6*d.*

Wages in the clothing industries.

711. TABLES OF WAGES IN THE CLOTHING INDUSTRIES.

(*a*) Table of Wages earned by Women in the Tailoring Industry, 1891–2.

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Reports, &c., p. 91 -	Tailors, clothiers, and outfitters.	London -	16 9	The wages of tailoresses in the log drawn up by the Amalgamated Society of Tailoresses are 24*s.* for machinists and first-class tailoresses, 18*s.* second-class, and 14*s.* learners (*i.e.*, an average of 18*s.* 8*d.*). This log was drawn up at the request of the London County Council. This body, having recently passed a resolution to pay trade union wages, probably enforce this log in their contracts. The wages paid in the Army Clothing Factory at Pimlico in 1892 were 14*s.* 9½*d.* on an average to indoor hands, and 14*s.* 11*d.* to outdoor hands (*i.e.*, an average of 14*s.* 10*d.*). The wages given in the table are the arithmetic mean of these rates.
Answers to Schedules of Questions, Group C., p. 399.	„	Exeter - -	16 0	The wages given by Messrs. Pinder and Tuckwell, outfitters, Exeter, were stated to vary from 12*s.* to 20*s.* The arithmetic mean has been taken.
Answers, &c., Group C., p. 400.	„ -	Plymouth -	15 0	The wages paid by Messrs. Pearse and Son, tailors and general outfitters, Plymouth, were said to vary from 12*s.* to 18*s.* The arithmetic mean has been taken.
Answers, &c., Group C., p. 403.	„ -	Dundee - -	15 0	The average wages paid to women employed on cheap clothing by J. P. Smith and Son, clothiers, Dundee, were said to range from 12*s.* to 18*s.* The arithmetic mean has been taken.
Reports, &c., p. 237 -	„ -	South Wales, Mid Wales, and North Wales.	14 9	Fifteen tailoresses were stated to earn a wage not exceeding 8*s.* 6*d.* a week. The wages of 13 varied from 8*s.* 6*d.* to 12*s.*, *i.e.*, an average of 10*s.* 3*d.*; the wages of 76 varied from 12*s.* to 17*s.* 6*d.*, *i.e.*, an average of 14*s.* 9*d.*; and the wages of 44 varied from 17*s.* 6*d.* to 20*s.*, *i.e.*, an average of 18*s.* 9*d.* The aggregate amount of wages earned by the 148 tailoresses in question was estimated by multiplying 8*s.* 6*d.* by 15, 10*s.* 3*d.* by 13, &c., and adding the totals thus obtained. The whole was then divided by 148 to obtain the weekly average.
Reports, &c., p. 35 -	„ -	Leeds - -	12 4	Thirty-six per cent. of the women and girls earn under 10*s.*; 32·5 per cent. earn from 10*s.* to 15*s.*; 31·5 earn over 15*s.* The average was determined by multiplying 10*s.* by 36; 32·5 by the mean between 10*s.* and 15*s.*, *i.e.*, 12*s.* 6*d.*; and 31·5 by 15*s.* The sum total of these results was then divided by 100. It may be noted that the average thus obtained may be somewhat too high (*see* average wages earned in Bristol).

[§ 711 (a.)] [§ 711 (

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Reports, &c., p. 59 -	Tailors, clothiers, and outfitters.	Walsall - -	12 0	In an ordinary week 8·8 per cent. of the women and girls earn under 6s.; 26·5 per cent. earn from 6s. to 10s.; 40 per cent. earn from 10s. to 15s.; 20·1 per cent. from 15s. to 20s.; and 4·6 per cent. 21s. and over. The aggregate amount earned was determined by adding the totals obtained by multiplying the per-centage obtaining certain rates of wages by the mean between those rates, and dividing the total thus obtained by 100. It may be noted that the average throughout the year is considerably lower (9s. 7d.) than the average obtained for an ordinary week.
Reports, &c., pp. 266-7 -	„ -	Scotland -	11 4	This is the arithmetic mean obtained from 14 different averages in the busy season, and nine averages in the slack season. The busy season averages varied from 6s. 6d. to 20s. a week. In some instances the averages were given as such; in others the rates were stated to vary between certain specified limits, and the arithmetic mean was taken. Sometimes the average was given separately for machinists and finishers, and the arithmetic mean of their averages has been taken. In some instances the piece-work rates for vests or trousers were given, together with the average number of garments per week. No account has been taken of the "extras" paid for certain items. The average for the slack season was similarly determined.
Reports, &c., p. 35 -	„ -	Bristol - -	11 3	38·2 per cent. of the women and girls earn a wage not exceeding 8s. a week; 30·4 per cent. earn wages varying from 8s. to 12s.; 14·3 per cent. earn from 12s. to 15s.; 8·9 per cent. from 15s. to 18s.; and 8·2 per cent. earn wages exceeding 18s. The sum total obtained by multiplying 38·2 by 8s., 30·4 by 10s., &c., and adding the results, has then been divided by 100 to obtain the average (*i.e.*, 10s. 11*d.*). From another table, in which it was stated that 53·4 per cent. earned wages not exceeding 10s., 29·5 per cent. an average of 12s. 6d., and 17·1 per cent. wages exceeding 15s., the average similarly obtained was 11s. 7d. The wage given in the table is the arithmetic mean between these results. It may be noted that the table from which the average wage earned in Leeds was obtained corresponds precisely with the latter of these tables.
Reports, &c., pp. 325-6 -	„ -	Ireland - -	11 1	In one factory in the south wages were said to vary from 5s. to 16s. (piece), or an average of 10s. 6d. In another factory in the south ordinary workers were stated to earn a wage varying from 10s. to 14s. (*i.e.*, an average of 12s.). In a third factory in the south machinists were stated to earn from 10s. to 12s. (*i.e.*, an average of 11s.), and hand-sewers from 7s. to 12s. (*i.e.*, an average of 9s. 6d.). The average obtained by machinists and hand-sewers together is therefore 10s. 3d. In a factory in Dublin machinists earned from 3s. 9d. to 19s. (*i.e.*, an average of 11s. 4½d.), hand-sewers from 9s. to 15s. (*i.e.*, an average of 12s.), finishers from 5s. to 12s. (*i.e.*, an average of 8s. 6d.). The average for this factory as a whole is thus estimated at 10s. 7½d. In a fifth factory wages were said to vary from 4s. to 20s. (*i.e.*, an average of 12s.). The estimate given in the table is the arithmetic mean of these five averages.
Reports, &c., p. 348 -	„ -	„ -	10 11	This is determined from six different averages varying from 10s. to 12s. In two instances the averages were given as such; in two others the average for the workers as a whole, and for ordinary workers respectively, was stated to vary between certain specified limits, and the arithmetic mean was taken as the average. In the other two factories the wages were given for machinists, waistcoat hands, coat hands, and finishers, and for machinists and hand-sewers respectively, and the arithmetic mean of the averages for each class separately has been taken as the average for the whole factory.
Reports, &c., p. 76 -	„ -	Manchester -	10 6	25·5 per cent. of the women and girls earn under 6s.; 10·8 per cent. from 6s. to 8s.; 20·6 per cent. from 8s. to 10s.; 9·8 per cent. from 10s. to 12s.; 9·8 per cent. from 12s. to 15s.; 9·8 per cent. from 15s. to 18s.; and 13·7 per cent. 18s. and upwards. To obtain the average wage the sum total obtained by multiplying 25·5 by 6, 10·8 by 7, &c., and adding the results, was divided by 100.
Answers to Schedules of Questions, Group C., p. 405.	„ -	Perth - -	9 0	The wages paid by Messrs. Jamieson, manufacturing clothiers, Perth, were stated to be 13s. for women and 5s. for young persons. The arithmetic mean is given in the table.
Reports, &c., p. 60 -	„ -	Dudley - -	8 11	In an ordinary week 44·5 per cent. earn wages not exceeding 6s.; 10·4 per cent. earn wages varying from 6s. to 8s.; 8·4 per cent. from 8s. to 10s.; 13·8 per cent. from 10s. to 12s.; 15·4 per cent. from 12s. to 15s.; 7·5 per cent. from 15s. to 18s. To obtain the average the sum total obtained by multiplying 44·5 by 6, 10·4 by 7, &c., and adding the results, was divided by 100.

(*b*) TABLE of WAGES EARNED by WOMEN in the HOSIERY and BOOT and SHOE INDUSTRIES, 1891–2.

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Answers to Schedules of Questions, Group C., p. 404.	Hosiers - -	Hawick, N.B. -	18 0	It was stated by Messrs. J. Henderson & Co. that the wages of women varied from 13s. to 23s. The arithmetic mean has been taken.
Minutes of Evidence, Group C., Inskip, 16,086.	Boots and shoes -	Leicester (Co-operative Society).	17 6	——
Reports, &c., p. 160 - -	Hosiers - -	Leicester -	15 11	The wages of seamers ranged from 11s. to 16s. (average 13s. 6d.); of machinists from 14s. to 27s. (average 20s. 6d.); of winders from 12s. to 20s. (average 16s.); of linkers from 15s. to 22s. (average 18s. 6d.); of knitters from 10s. to 28s. (average 19s.); of cutters from 4s. to 14s. (average 9s.); of finishers 12s. to 18s. (average 15s.). The arithmetic mean of these seven rates has been given in the table. It may be noted that the wages paid are lower in some of the outlying districts, and employment is more uncertain.
Minutes of Evidence, Group C., Salter, 14,936-7; Midgley, 15,668.	Boots and shoes -	Leeds and Pudsey.	14 6	It was stated by Mr. Salter that the wages varied from 13s. to 16s. (*i.e.*, average 14s. 6d.). It may be noted in corroboration of this estimate that Mr. Midgley stated that the correct average for machinists (women) was 14s. 7d.

[§ 711 (b.)]

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Reports &c., pp. 159–60 -	Hosiers - -	Nottingham -	13 4	The wages paid for winding are 11*s.*; for turning off, 13*s.* 6*d.*; for mending, 12*s.* 6*d.*; for cutting, 20*s.*; for machining, 18*s.*; for stitching, 13*s.*; for cleaning, welting, and sleeving shirts, 5*s.* 6*d.*; for seaming, 13*s.* The arithmetic mean of these eight rates is given. The wages paid here as in Leicester are lower in some of the outlying districts and employment is more uncertain.
Answers to Schedules of Questions, Group C., p. 395.	Boots and shoes -	Northampton -	13 0	Wages were said to vary from 12*s.* to 14*s.* The arithmetic mean has been taken.
Reports, &c., p. 351 - -	„ -	Ireland - -	12 9	Wages in two factories averaged 12*s.* 6*d.* and 13*s.* respectively. The arithmetic mean has been taken.
Reports, &c., p. 35 -	„ -	Bristol - -	12 5	The wages of 28·6 per cent. of the workers are under 8*s.*; of 21·4 per cent. between 8*s.* and 12*s.*; of 16 per cent. between 12*s.* and 15*s.*; of 16 per cent. between 15*s.* and 18*s.*; of 18 per cent. over 18*s.* The average was obtained by adding the totals got by multiplying 28·6 by 8; 21·4 by 10, &c., and dividing by 100. It may be noted that where the women are paid by time, 11*s.* to 13*s.* was said to represent the ordinary wage.
Minutes of Evidence, Group C., Tabberer, 13,751, 13,862-3.	Fancy hosiery manufacture.	Leicester -	10 9	It was stated that the wages of women and girls in the factory in almost constant employment vary from 10*s.* to 15*s.* (*i.e.*, average of 12*s.* 6*d.*), and 4*s.* 6*d.* to 8*s.* (*i.e.*, average 5*s.* 9*d.*). In the warehouse they average 14*s.* The arithmetic mean of these rates has been taken.
Minutes of Evidence, Group C., Hawley, 13,912.	Dyeing and finishing.	„ -	10 6	The wages of women were stated to average 13*s.*; of girls, 8*s.* The arithmetic mean has been taken.
Answers to Schedules of Questions, Group C., p. 397.	Boots and shoes -	Carnoustie, N.B.	10 0	It was stated by Mr. J. Winter that the wages of women varied from 5*s.* to 15*s.* The arithmetic mean has been taken.
Minutes of Evidence, Group C., Holmes, 12,877-8.	Hosiery-stitchers	Midland Counties.	9 6	Full time wages were said to average 9*s.* 6*d.* The average throughout the year was said to be 8*s.*

(c) TABLE of WAGES EARNED by WOMEN in MISCELLANEOUS CLOTHING INDUSTRIES, 1891-2.

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Answers to Schedules of Questions, Group C., p. 854.	Shirt and collar makers.*	London - -	16 0	The rates for day workers were stated to vary from 14*s.* to 15*s.* (*i.e.*, an average of 14*s.* 6*d.*), and the rates for piece workers were said to average 17*s.* 6*d.* The arithmetic mean between these two means is given in the table.
Reports, &c., p. 31 -	Straw-hat making	Luton - -	15 7	The wages earned by machinists and finishers respectively were given for two average weeks in two different factories at Luton. In the first factory, in one average week, six machinists were earning under 6*s.*, 14 between 6*s.* and 10*s.* (*i.e.*, an average of 8*s.*), 11 between 10*s.* and 12*s.* (*i.e.*, an average of 11*s.*), 25 between 12*s.* and 15*s.* (*i.e.*, an average of 13*s.* 6*d.*), 11 from 15*s.* to 18*s.* (*i.e.*, an average of 16*s.* 6*d.*), eight between 18*s.* and 21*s.* (*i.e.*, an average of 19*s.* 6*d.*), 15 from 21*s.* to 25*s.* (*i.e.*, an average of 23*s.*), 11 from 25*s.* to 30*s.* (*i.e.*, an average of 27*s.* 6*d.*), three were earning 35*s.*, and one 50*s.* The average wage for machinists in this week was determined by adding the totals obtained by multiplying 6 by 6, 14 by 8, &c., and dividing the sum total by 105 (the total number of machinists employed in the week). This average amounts to 16*s.* 8*d.* The wages similarly obtained for machinists in the second average week amount to 18*s.* 6*d.* The average wages of machinists in this factory have therefore been taken as the mean between 16*s.* 8*d.* and 18*s.* 6*d.*, *i.e.*, 17*s.* 7*d.* Similarly, the average wage for finishers was found to be 11*s.* 4*d.*, and the average for machinists and finishers together is 14*s.* 5½*d.* In the second factory the average wage of straw-hat machinists and finishers together were similarly determined for the average week given, and amounted to 16*s.* 8*d.* The estimate given in the table for the industry as a whole is the arithmetic mean between 16*s.* 8*d.* and 14*s.* 5½*d.*
Minutes of Evidence, Group C., Wates, 12,616.	Elastic-web trade	- - -	15 0	Women's wages were said to vary from 10*s.* to 20*s.*, and the arithmetic mean has been taken.
Reports, &c., pp. 93–4 -	Straw-hat making	London - -	13 2	In one factory the wages were given for four different weeks in the year, two of which were said to be "the lowest paid in the year," one was "fairly busy," and the fourth, "one of the busiest in the year." The numbers of women and girls earning wages which lay within certain specified limits were given for each week, and the average for the whole number employed was obtained for each week on the method already explained in the remarks on the wages of the straw-hat makers, Luton. The means thus determined were found to be 10*s.* 4*d.*, 8*s.* 7*d.*, 16*s.* 4*d.*, 17*s.* 4*d.* The wage given in the table is the arithmetic mean of these. The employer from whom these wage-statistics were obtained was employed in making the best class of hats. It may be noted that the manager of a small workshop stated that the average wages throughout the year would be about 10*s.*
Reports, &c., p. 76 -	Apron, pinafore, &c. departments of clothing factories.	Manchester -	13 0	3·3 per cent. of the workers earn under 6*s.*; 3·3 per cent. from 6*s.* to 8*s.*; 13·1 per cent. from 8*s.* to 10*s.*; 24·6 per cent. from 10*s.* to 12*s.*; 21·3 per cent. from 12*s.* to 15*s.*; 24·6 per cent. from 15*s.* to 18*s.*; and 9·8 per cent. from 18*s.* upwards. The average was obtained by adding the totals obtained by multiplying 3·6 by 6, 3·3 by 7, 13·1 by 9, &c., and dividing the result by 100.

* The average wage of the machinists in the shirt factory connected with the Scottish Wholesale Co-operative Society, was stated to be 12*s.*, "some of them running as high as 1*l.* a week for making shirts." (Maxwell, 552. Evidence given before the Commission Sitting as a Whole.)

[§ 711 (c.)] [§ 711 (c.)]

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Reports, &c., p. 77 -	Umbrella-making	Manchester -	12 3	In the umbrella department in a clothing factory in Manchester throughout the year 1891, one worker earned from 6*s.* to 8*s.*, one from 8*s.* to 10*s.*, seven from 10*s.* to 12*s.*, four from 12*s.* to 15*s.*, three from 15*s.* to 18*s.* The mean for these 16 workers, determined by the method previously adopted, amounted to 12*s.* 3*d.* This was, however, too small a department to be representative of the large umbrella-makers in the town.
Reports, &c., p. 35 -	Corset manufacture.	Bristol - -	12 0	The wages of 20·3 per cent. of the women employed were below 8*s.*; of 31·8 per cent. from 8*s.* to 12*s.*; of 24·6 per cent. from 12*s.* to 15*s.*; of 16·7 per cent. from 15*s.* to 18*s.*; and of 6·6 per cent. were 18*s.* and upwards. The average, which was determined in the manner previously explained, amounted to 12*s.*
Reports, &c., p. 94 -	Flower-making -	London - -	11 8	In a factory in London "cutters" earn from 9*s.* to 12*s.* (*i.e.*, an average of 10*s.* 6*d.*, and it was also stated that the majority earn 10*s.* 6*d.*), good "shaders" earn from 12*s.* to 16*s.* (*i.e.*, an average of 14*s.*), and less experienced "shaders" from 9*s.* to 11*s.* (*i.e.*, an average of 10*s.*). The average for "shaders" as a whole is therefore 12*s.* "Black makers" earn from 7*s.* 6*d.* to 12*s.* (*i.e.*, an average of 9*s.* 9*d.*). "Grasses" earn 11*s.* (*i.e.*, better hands). The majority of "leaf makers" earn 9*s.*, and the wages of "mounters" average 17*s.* 10½*d.* The estimate given in the table is the arithmetic mean of 10*s.* 6*d.*, 12*s.*, 9*s.* 9*d.*, 11*s.*, 9*s.*, and 17*s.* 10½*d.*
Reports, &c., p. 76 -	Mantle-making -	Manchester -	11 3	12·2 per cent. of the women employed in these departments of the clothing factories earn less than 6*s.*; 17·1 per cent. earn from 6*s.* to 8*s.*; 19·5 per cent. from 8*s.* to 10*s.*; 15·9 per cent. from 10*s.* to 12*s.*; 17·1 per cent. from 12*s.* to 15*s.*; 10·9 per cent. from 15*s.* to 18*s.*; and 7·3 per cent. earn 18*s.* and upwards. The average, which was determined in the manner previously explained, amounted to 10*s.* 11*d.* In another factory, where the workmanship was higher than in the preceding, the wages, similarly determined, amounted in an ordinary week to an average of 11*s.* 8*d.* The figure in the table is approximately the mean between these two results.
Reports, &c., p. 327 -	Lace-making -	Ireland - -	11 0	The wages of skilled lace-makers were said to vary from 10*s.* to 12*s.* The arithmetic mean has been taken.
Reports, &c., p. 76 -	Shirt manufacture	Manchester -	10 9	The wages of 3·1 per cent. of the women employed were under 6*s.*; of 26·2 per cent. from 6*s.* to 8*s.*; of 18·7 per cent. from 8*s.* to 10*s.*; of 17·2 per cent. from 10*s.* to 12*s.*; of 16·4 per cent. from 12*s.* to 15*s.*; of 17·2 per cent. from 15*s.* to 18*s.*; and of 1·2 per cent. were 18*s.* and upwards. The average was determined in the manner previously explained.
Reports, &c., p. 277 -	Umbrella covering	Scotland -	10 0	In the busy season wages in different cases were said to average 12*s.*, 14*s.*, 12*s.* 3*d.* (*i.e.*, 12*s.* to 12*s.* 6*d.*), and 12*s.* The busy season average has therefore been estimated at 12*s.* 7*d.*, the arithmetic mean of these four rates. Similarly, the slack season average was found to be 7*s.* 4½*d.* The figure in the table is the arithmetic mean between these rates. It may be noted that there was no proof that home workers accept work at lower rates than factory workers. One witness stated: "Wages were wages five or six years ago." "I have "known many a worker who could make 20*s.* a week all the year "round."
Reports, &c., p. 49 -	Button-making -	Birmingham	9 7	In a factory where linen buttons were made it was stated that the majority would earn about 10*s.* In a metal and ivory button factory 13·4 per cent. of the women and girls earned under 6*s.*; 18 per cent. between 6*s.* and 8*s.* (*i.e.*, an average of 7*s.*); 29·8 per cent. between 8*s.* and 10*s.* (*i.e.*, and average of 9*s.*); 22·4 per cent. between 10*s.* and 12*s.* (*i.e.*, an average of 11*s.*); and 16·4 per cent. between 12*s.* and 15*s.* (*i.e.*, an average of 13*s.* 6*d.* By multiplying 13·4 by 6, 18 by 7, &c., and dividing the total by 100, an average of 9*s.* 2*d.* was obtained; and the estimate given in the table is the arithmetic mean of the rates in the two factories.
Reports, &c., pp. 169–170 -	Lace-making -	- - -	9 4	This was obtained from six different rates, varying from 8*s.* to 13*s.* 6*d.* In one case the average was given as such; in the others, wages were said to range between certain specified limits, and the arithmetic mean was taken. It may be noted that in many cases the estimates given by the employers were confirmed by the workers.
Reports, &c., p. 76 -	Corset-making -	Manchester -	8 7	In a corset factory at Manchester 32·3 per cent. of the women and girls were said to earn not more than 6*s.*; 14·5 per cent. from 6*s.* to 8*s.* (*i.e.*, an average of 7*s.*); 25·8 per cent. from 8*s.* to 10*s.* (*i.e.*, an average of 9*s.*); 18 per cent. from 10*s.* to 12*s.* (*i.e.*, an average of 11*s.*); 7·2 per cent. from 12*s.* to 15*s.* (*i.e.*, an average of 13*s.* 6*d.*); 1·6 per cent. from 15*s.* to 18*s.* (*i.e.*, an average of 16*s.* 6*d.*); and 0·7 per cent. 18*s.* and upwards. The average given in the table was obtained by multiplying 32·2 by 6, 14·5 by 7, &c., and dividing the total by 100.
Reports, &c., p. 49 -	Umbrella-making	Birmingham -	7 1	In a factory at Birmingham 40·4 per cent. of the women and girls were said to earn not more than 6*s.* a week; 38·5 from 6*s.* to 8*s.* (*i.e.*, an average of 7*s.*); 15·6 per cent. from 8*s.* to 10*s.* (*i.e.*, an average of 9*s.*); and 5·5 per cent. from 10*s.* to 12*s.* (*i.e.*, an average of 11*s.*). The average given in the table was obtained by multiplying 40·4 by 6, 35·8 by , &c., and dividing the sum of these results by 100.
Reports, &c., p. 328 -	Knitting - -	Donegal -	7 0	It was stated that women earn from 6*s.* to 8*s.* a week. The arithmetic mean has been taken.
Reports, &c., p. 30 -	Straw-plaiting -	Luton - -	4 6	It was stated that straw-plaiters earned generally from ½*d.* to 1*d.* an hour. The arithmetic mean (¾*d.*) was therefore taken as the estimate of hourly earnings. On the assumption that they worked 12 hours a day for six days in the week the average weekly earnings are 4*s.* 6*d.* It may be noted that one witness stated that she could make "from 3*s.* to 4*s.* easy." The maximum hourly earnings in this industry were said to be 1½*d.*
Reports, &c., p. 327 -	Sprigging embroidery.	Donegal -	2 9	An agent who employed "hundreds of people" stated that wages ranged from 2*d.* to 9*d.* a day; and two others employing 600, and from 200 to 300 people respectively, that they varied from 3*d.* to 8*d.* The arithmetic mean of these rates (5¾*d.*) has therefore been taken as the daily earnings, and multiplied by six to give the weekly earnings.

[§ 712.] Wages of shop assistants, barmaids, dressmakers, and milliners.

712. TABLE OF WAGES OF SHOP ASSISTANTS, BARMAIDS, DRESSMAKERS, AND MILLINERS,* 1891–2.

[§ 712

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. *d.*	
Report, &c., pp. 4–5, 8–9	Shop assistants	London	21 6	This is the arithmetic mean of four different averages obtained for North London, South London, East London, and for London as a whole. These averages were taken to include board and lodging, and premiums, as far as it was possible to take these into account. The average salary earned by 69 shop assistants in North London, in addition to board and lodging, was stated to be 42*l.* with premiums. On the supposition that holidays amount to 14 days in the year, and Bank Holidays (*i.e.*, about three weeks per annum), the monetary value of the board and lodging amounts to 17*l.* 3*s.* The average yearly wages in North London therefore amounts to 59*l.* 3*s.*, or an average weekly wage of 24*s.* 2*d.* (49 weeks). The salaries and commission of 97 shop assistants were given for South London, 95 of whom received board and lodging in addition (*i.e.*, 17*l.* 3*s.* per annum), and two, board only (*i.e.*, 12*l.* 5*s.* per annum). The average wages were then determined as follows:—Wages were in each case said to vary between certain specified limits. The arithmetic mean of these rates was then multiplied by the total number in receipt of such salaries. The aggregate wages of the whole number of shop assistants was thus determined and divided by the number of assistants. The monetary value of the board in the one case, and board and lodging in the other, was then added to the averages thus obtained, and the mean of these results, when found, gave an average wage for South London of 25*s.* 10*d.* The average wage was similarly determined for East London, and was found to be 18*s.* 11*d.*, including board and lodging. The average wage for London as a whole was determined from the Table on pp. 8, 9. Where the premium was said to vary between certain specified limits per week, the arithmetic mean has been taken, multiplied by 49 (number of weeks at work), and added to the yearly wages to obtain the yearly average, including premiums. The arithmetic mean has then been taken of the 11 averages thus obtained (where sufficient details were not given to determine the average, the statement was omitted), an estimate was allowed for the monetary value of the board and lodging, and the wage in London as a whole was estimated at 17*s.* 10*d.* The estimate given in the table for London as a whole is the arithmetic mean of these results, *i.e.*, North London, 24*s.* 2*d.*; South London, 25*s.* 10*d.*; East London, 18*s.* 11*d.*; London (as a whole), 17*s.* 10*d.*
Reports, &c., p. 86	"	Provincial towns	20 8	The salaries of 14 shop assistants in provincial towns at the present time, and details as to whether board and lodging, board only, or neither were granted in addition, were given in a table in Miss Collet's Report on the Conditions of Employment of Shop Assistants, &c. To some extent the salaries vary according to the length of time during which the assistant has been employed. This period varies from 4 to 16 years in the shop assistants under consideration. Board for the year has, as before, been estimated at 12*l.* 5*s.*, and board and lodging at 17*s.* 3*d.* To determine the average in the table the monetary value of the board or lodging, as the case might be, was added to the yearly salary. The arithmetic mean of the results so obtained was then found and divided by 49 to find the approximate weekly mean. It is not stated whether the given salaries include premiums.
Reports, &c., pp. 330–6	"	Ireland	20 2	This average is the arithmetic mean of 18 different averages obtained from Ireland as a whole, omitting salaries earned by the heads of departments. They are estimated so as to include board and lodging and commissions (as far as it was possible to take these into account), where these were granted in addition to wages. With one exception, where it was definitely stated that no holidays were granted, the weekly wages have been obtained from the yearly wages on the supposition that holidays amount to 14 days in the year and Bank Holidays, *i.e.*, about three weeks per annum. The monetary value for board and lodging during this period amounts to 17*l.* 3*s.*; of board alone, 12*l.* 5*s.*; of dinner alone, 4*l.* 18*s.* In 15 instances the average yearly salaries were thus obtained. Having taken as the average the arithmetic mean where the salaries were stated to range between certain specified limits, in the one instance where no holidays were given the average weekly salary for the 52 weeks was determined and the result multiplied by 49 in order that the salary in this case might be on the same basis as the other salaries. In two cases where the weekly wages were given the averages were multiplied by 49 and the yearly salaries thus obtained. The arithmetic mean of these 18 averages was then found to be 49*l.* 6*s.* 1*d.*, which gave a weekly estimate of 20*s.* 2*d.*
Reports, &c., pp. 10–12	Milliners	London	18 2	From Table III., on pp. 11, 12, it was estimated that the average wages of "second hands," "ordinary hands," and "first hands" were 19*s.* 6*d.*, 13*s.* 10*d.*, and 20*s.* respectively. These averages were obtained from other averages, which were in some instances given as such; in others the arithmetic mean was taken of the limits between which wages were said to vary. Where dinner and tea were given in addition to wages, the sum of 3*s.* 6*d.* per week was added to the wage given, before the average was found. The average wage of London milliners, according to this table, was then taken to be the mean of 19*s.* 6*d.*, 13*s.* 10*d.*, and 20*s.*, *i.e.*, 17*s.* 9*d.* In another table, on p. 10, the wages of five milliners in West London were said to be 80*l.*, 60*l.*, 40*l.*, 25*l.*, and 20*l.* respectively, in addition to board and lodging (*i.e.*, 17*l.* 3*s.* per annum), and six were said to be paid 8*s.* a week with board only (*i.e.* 8*s.* + 5*s.* = 13*s.* a week). Estimating the number of weeks at 49, the yearly wages of these six milliners average 31*l.* 17*s.* The average yearly wages of the 11 milliners were then found to be 45*l.* 12*s.* 5*d.*, *i.e.*, an average weekly wage of 18*s.* 8*d.* Similarly, the average yearly wages of 11 milliners in North London were found to be 32*l.* 7*s.* 6*d.* in addition to board. The weekly average, including the monetary value of the board, is thus estimated (for 49 weeks) at 18*s.* 1*d.* The estimate given in this table is the arithmetic mean of 17*s.* 9*d.* (*i.e.*, London as a whole), 18*s.* 8*d.* (West London), and 18*s.* 1*d.* (North London).

* The following assumptions have been used in calculating the wages in the above table:—
(i.) The monetary value of board and lodging = 7*s.* a week; of board only = 5*s.* a week; of lodging only = 3*s.* a week (*see* Report on the Conditions of Work in Wales, p. 5); of dinner and tea only = 3*s.* 6*d.* a week; of tea only = 1*s.* 6*d.* a week.
(ii.) The number of weeks worked during the year is, on an average, 49. It appeared from the table (pp. 6, 7, Lady Assistant-Commissioners Reports) that 14 days and Bank Holidays were frequently granted as holidays.

It may be noted that in the evidence before the Commission, Mr. Davis stated that employers calculate board and lodging as equal to 10*s.*, but he himself asserted that 4*s.* 6*d.* would be a more accurate estimate. The mean between 4*s.* 6*d.* and 10*s.* is 7*s.* 3*d.*, which differs but slightly from the estimate given. (Digest Group C., Vol. III., p. 91; Davis, 30,778.)

[§ 712.] [§ 712.]

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. *d.*	
Reports, &c., p. 235 - -	Shop assistants -	Wales - -	17 0	This average does not include any premiums. Three shop assistants in Wales were said to earn a salary not exceeding 10*l.* a year, 51 a salary between 10*l.* and 15*l.*, 101 between 15*l.* and 20*l.*, 165 between 20*l.* and 30*l.*, 120 between 30*l.* and 40*l.*, and three earned salaries exceeding 40*l.* The approximate aggregate amount earned was obtained by multiplying the mean between the rates given by the number of assistants whose salaries fell between those limits, and adding the totals thus obtained. This sum was then divided by the total number of assistants (*i.e.*, 443), and then divided by 49 (*i.e.*, the number of weeks supposed at work throughout the year). This gave an average of 10*s.* in addition to board and lodging, or an average of 17*s.* inclusive of the monetary value of board and lodging.
Reports, &c., p. 292 - -	Dressmakers	Scotland - -	14 1	It was stated that skirt-makers are usually paid about 10*s.*, 12*s.*, or 14*s.* (*i.e.*, an average of 12*s.*). Bodice-makers are paid about the same rate. Girls' wages ran from 10*s.* to 14*s.* a week (*i.e.*, an average of 12*s.*), and "second hands" are paid about 50*l.* a year (*i.e.*, 20*s.* 5*d.* a week for 49 weeks). The arithmetic mean of these rates $\left(\frac{3 \times 12s. + 20s. 5d.}{4}\right)$ has been taken.
Reports, &c., p. 204 - - Minutes of Evidence, Group C., Shortt, 8719; Walker, 15,724-6.	Barmaids, waitresses, bookkeepers in hotels, and manageresses.	- - -	13 8	In addition to board and lodging, 102 women earn wages not exceeding 8*s.* a week, 182 earn an average of 9*s.*, 33 earn an average of 12*s.* 6*d.*, 11 earn an average of 17*s.* 6*d.*, and five earn wages exceeding 20*s.* a week. Proceeding on the method already adopted, the average wages were estimated to be 9*s.* 6*d.* with board and lodging, or a total approximate wage of 16*s.* 6*d.* With partial board or none, and without lodging, 26 women earn an average not exceeding 8*s.* a week, 30 earn an average of 9*s.* a week, 24 an average of 12*s.* 6*d.* a week, and 14 an average of 17*s.* 6*d.* a week. One earns a wage exceeding 20*s.* a week. The mean for the whole of these 95 women was found to be 10*s.* 10*d.* The estimate given in the table is the arithmetic mean between 16*s.* 6*d.* and 10*s.* 10*d.* It would appear that this is probably somewhat too low, as no account has been taken of those receiving partial board in the latter group. It may be noted in corroboration of the first average that Mr. Shortt, in the evidence given before the Commission, stated that the wages of a good barmaid averaged 10*s.* a week with board and lodging. The wages of barwomen, Mr. Walker stated, averaged 10*s.* a week, rising to 18*s.* or 21*s.*, in addition to board and lodging. This may also serve to corroborate the above figures, where 182 women were said to earn from 8*s.* to 10*s.* (*i.e.*, an average of 9*s.*) a week, and 11 earn an average of 17*s.* 6*d.*, and the wages of five exceed 20*s.*
Reports, &c., pp. 336-40 -	Dressmakers, milliners, and mantle-makers.	Ireland -	12 11	This is determined from 20 different averages, which vary from 9*s.* to 16*s.* Wages in the different firms were, generally speaking, stated to vary between certain specified limits, the lower of which would probably only be given to beginners. Thus in one instance where wages were stated to range from 2*s.* 6*d.* to 10*s.* it was added that the latter sum was reached after a number of years; and in another firm where wages were said to range from 2*s.* 6*d.* to 15*s.* it was stated that the latter sum was reached in from three to seven years. In determining the mean the latter sum has therefore in each case been taken to represent the average of skilled workers.
Reports, &c. p. 14 - -	Dressmakers -	London (West and North).	12 6	Details were given with regard to the wages of 82 dressmakers in West London and 36 dressmakers in North London. In West London 24 dressmakers earn under 8*s.* a week, 12 earn under 10*s.*, seven earn under 12*s.*, 14 earn under 14*s.*, 13 earn under 16*s.*, 11 earn under 18*s.*, one earns under 20*s.* The aggregate amount of wages was roughly determined as the sum total of (24 × 8*s.*) (12 × 10*s.*), &c. This was divided by 82, and the weekly mean was thus estimated at 12*s.* 5*d.* Similarly, in North London, the mean was estimated to be 12*s.* 8*d.* The arithmetic mean of these rates is given in the table. It may be noted in corroboration of this estimate that an employer in South London, employing 120 dressmakers, said that their wages (excluding first hands) ranged from 6*s.* to 16*s.* or 17*s.* (*i.e.*, an average of 11*s.* 3*d.*). Excluding, in West London, the 11 dressmakers who earn under 18*s.*, and the dressmaker earning under 20*s.*, the average wage is 18*s.* 5*d.* a week; and in North London, excluding the four dressmakers earning over 16*s.* (*i.e.*, two earning 20*s.*, one earning 23*s.*, and one earning 25*s.*), the average wage is 11*s.* 6*d.*
Reports, &c., p. 89 - -	„ -	Provincial towns	10 8	This is the arithmetic mean of nine different averages for "best hands," skirt and bodice machinists, bodice hands, skirt hands, and assistants. Where meals are allowed in addition, 5*s.* has been added to the weekly wages given; where tea is given, 1*s.* 6*d.* has been similarly added.
Reports, &c., p. 312 - - Minutes of Evidence, Group C., Milligan, 30 929-30,949.	Shop assistants -	Scotland - -	10 7	This estimate is the mean of 12 different "general averages" of female assistants considered qualified from 18 years of age upwards. It may be noted in corroboration of this result that the wages of girl shop assistants in Scotland were stated by Mr. Milligan, in his evidence before the Commission, to range from 12*s.* to 15*s.* (*i.e.*, an average of 13*s.* 6*d.*), and the wages of apprentices were said to range from 4*s.* to 12*s.* (*i.e.*, an average of 8*s.*). The arithmetic mean between 13*s.* 6*d.* and 8*s.* is 10*s.* 9*d.*, which is in almost exact agreement with the estimate given in the table.
Reports, &c., p. 236 -	Dressmakers and milliners.	Wales - -	9 4	63 women were said to earn a weekly wage not exceeding 5*s.* The wages per week of 135 lie between 5*s.* and 7*s.* 6*d.*; of 237 between 7*s.* 6*d.* and 10*s.*; of 89 between 10*s.* and 12*s.* 6*d.*; of 63 between 12*s.* 6*d.* and 15*s.*; of 33 between 15*s.* and 20*s.*; and the wages of 11 exceed 20*s.* The aggregate amount of wages earned was taken as the sum total of (63*s.* × 5*s.*) (135*s.* × 6*s.* 3*d.*) (237*s.* × 8*s.* 9*d.*), &c. The sum total thus obtained was divided by 631, the total number of women employed, and the average wage thus obtained was 9*s.* 4*d.*

713. TABLE OF WAGES EARNED BY WOMEN IN PRINTING AND COGNATE TRADES, 1891-2. [§ 713.]

Reference.	Class of Work.	District.	Mean of Returns collected, (Weekly Wages.)	REMARKS.
			s. d.	
Reports, &c., p. 93 -	Compositors -	London - -	20 4	The wages of the women employed in one factory were as follows:—One earned 28*s.*, one earned 27*s.* 6*d.*, five earned from 23*s.* to 24*s.* (*i.e.*, an average of 23*s.* 6*d.*), two earned from 22*s.* to 23*s.* (*i.e.*, an average of 22*s.* 6*d.*), one earned 21*s.* 4*d.*, one earned 19*s.* 3½*d.*, two earned from 17*s.* to 18*s.* (*i.e.*, an average of 17*s.* 6*d.*), one earned 15*s.* 7½*d.*, and two apprentices in their third and second year respectively earned 7*s.* and 5*s.* a week. The mean wage of these 16 workers was found to be 20*s.* 1*d.* At the Women's Printing Society of five apprentices, two average 12*s.* and 18*s.*, and the remaining three 24*s.*, and three others average 22*s.* 8*d.*, 21*s.* 5*d.*, and 19*s.* respectively. The mean wage in this instance is therefore 27*s.* 7½*d.* The estimate given in the table is the arithmetic mean of 20*s.* 7½*d.* and 20*s.* 1*d.*
Reports, &c., pp. 90–1 -	Printers -	Scotland -	15 4	On the "'stab." or time wage a girl may start at 4*s.* a week and rise to 9*s.*, 12*s.*, 15*s.* It does not appear whether or not the wage of 15*s.* is the average after a few years' apprenticeship. In one factory, however, it was definitely stated that a "'stab." wage of 15*s.* was paid. The supposition has therefore been made that this is the average wage for skilled workers. In another factory the girls are put on piece work at the end of three years; the wages then are:—minimum, 7*s.* 8*d.*; average, 13*s.* 8*d.*; maximum, 19*s.* 2*d.* In another firm beginners start on a time wage of 3*s.* 6*d.*, and after three years are put on piece work. By the fifth or sixth year the average wage of 18*s.* is earned. At type setting the wage varies from 13*s.* to 16*s.* per week (*i.e.*, an average of 14*s.* 6*d.*). In the setting of tables the girls were stated to make 15*s.* 4*d.* a week. The estimate given in the table is the arithmetic mean of 15*s.*, 13*s.* 8*d.*, 18*s.*, 14*s.* 6*d.*, 15*s.* 4*d.* This estimate refers to experienced workers it appears, however, from the wages given at the Women's Printing Society, London, and the other London firm mentioned above, that the largest proportion of the workers employed are of this nature.
Reports, &c., p. 293 -	Map - printing factory.	Scotland (Edinburgh).	12 4	In the printing room workers earn a fixed wage of 10*s.* after four or five years. In the colour or stone room girls are paid a time wage of 7*s.*, 13*s.*, or 15*s.*, according to experience and ability. In three or four years the worker becomes proficient. It is therefore estimated that at the end of this period wages would vary from 13*s.* to 15*s.* (*i.e.*, an average of 14*s.*). In the mounting room the girls earn wages varying from 5*s.* to 13*s.*, according to their skill and the time engaged on the work. The average wage of an experienced worker has been estimated at 13*s.*, and the figure in the table is the arithmetic mean of 10*s.*, 14*s.*, and 13*s.*
Reports, &c., p. 293 - Answers to Schedules of Questions, Group C., p. 88.	Publishing and book-binding (binding and folding department).	„ -	11 6	At the end of three years women are put on piece work and earn from 10*s.* to 13*s.* a week. The arithmetic mean has been taken. The Book-binders' and Machine Rulers' Consolidated Union (Edinburgh and Leith) stated that women's wages varied from 10*s.* to 12*s.* This average differs but slightly from that given in the table.
Reports, &c., p. 89 -	Stationers, envelope-makers, and paper-bag departments.	Liverpool -	11 0	In the paper-bag making department girls begin at 2*s.* 6*d.* a week, and reach a maximum of 10*s.* This has therefore been taken as the average for experienced workers. Similarly, at a firm of stationers and envelope makers, the maximum wage was 12*s.* The estimate in the table is the arithmetic mean between 10*s.* and 12*s.*
Reports, &c., p. 294 -	Stationery and envelope factory.	Scotland -	10 8	The wages in the envelope department were said to vary from 10*s.* to 12*s.* (*i.e.*, an average of 11*s.*), and for machine workers 10*s.* In the stamping department they vary from 10*s.* to 11*s.* (*i.e.*, an average of 10*s.* 6*d.*); in the black-bordering department from 10*s.* to 12*s.* (*i.e.*, an average of 11*s.*); and in the folding and stitching departments from 10*s.* to 12*s.* (*i.e.*, an average of 11*s.*). The estimate given in the table is the arithmetic mean of the averages in the different departments.
Reports, &c., p. 35 -	Paper bags -	Bristol - -	10 8	30·3 per cent. were stated to earn wages not exceeding 8*s.*; 40·9 per cent. earn an average of 10*s.*; 21·3 per cent. earn an average of 13*s.* 6*d.*; 0·9 per cent. earn an average of 16*s.* 6*d.*; and 6·6 per cent. earn 18*s.* a week and over. The average in the table was determined by multiplying 30·3 by 8, 40·9 by 10, &c., adding the results, and dividing by 100.
Reports, &c., p. 295 -	Paper mills - -	Scotland -	10 1	Wages in the finishing and examining department vary from 12*s.* to 14*s.* (*i.e.*, an average of 13*s.*); in the glazing room they vary from 10*s.* to 11*s.* (*i.e.*, an average of 10*s.* 6*d.*); in the cutting department the women start at 4*s.*, rise 1*s.* a year for three years, and are then promoted. Wages therefore vary from 4*s.* to 7*s.* (*i.e.*, an average of 5*s.* 6*d.*). The wages of women employed in picking and sorting rags vary from 11*s.* to 12*s.* a week (*i.e.*, from 1*s.* 10*d.* to 2*s.* a day). The figure given in the table is the arithmetic mean of 13*s.*, 10*s.* 6*d.*, 5*s.* 6*d.*, and 11*s.* 6*d.*
Reports, &c., p. 69 - Answers to Schedules of Questions, Group C., p. 858.	Book - folding, book - binding, and book-sewing.	Liverpool and Birkenhead.	10 0	The Book Folders and Sewers' Union (Liverpool and Birkenhead) stated that wages averaged 1*s.* 8*d.* a day (*i.e.*, an average of 10*s.* a week, on the basis of six days' work). At a book-binding firm in Liverpool, wages of full workers were said to average 10*s.* a week.
Reports, &c., p. 326 -	Folding, stamping, book-binding, &c.	Ireland - -	9 6	Wages were said to vary from 5*s.* to 14*s.* The arithmetic mean has been taken.
Reports, &c., p. 240 -	Book - binding, book - folding, and bag-making.	Wales - -	9 4	Out of 94 women engaged in these industries, 23 earn wages not exceeding 7*s.* a week; 54 earn wages between 7*s.* and 10*s.* (*i.e.*, an average of 8*s.* 6*d.*); 17 earn wages between 10*s.* and 20*s.* (*i.e.*, an average of 15*s.*). The average given in the table was obtained by adding the results obtained by multiplying 23 by 7, 54 by 8½, 17 by 15, and dividing the total by 94.
Reports, &c., p. 326 -	Paper mills - -	Ireland - -	7 3	Wages were said to vary from 4*s.* 6*d.* to 10*s.* The arithmetic mean has been taken.

[§ 714.] Wages in general metal, chemical, and cognate trades.

714. TABLE OF WAGES EARNED BY WOMEN IN GENERAL METAL, CHEMICAL, AND COGNATE TRADES, 1891–2.

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Reports, &c., . 147 -	Watch manufacture.	- - -	14 3	Wages in the lower classes of work were said to vary from 10s. to 12s. (*i.e.*, a mean of 11s.), and in the higher classes of work from 15s. to 20s. (*i.e.*, a mean of 17s. 6d.). The estimate in the table is the arithmetic mean of 11s. and 17s. 6d. It may be noted that women are employed to a slight extent only upon skilled work, and, except in certain departments, attempts to promote them to such work have failed. This estimate is, therefore, probably too high.
Reports, &c., p. 49 -	Metallic bedstead manufacture.	Birmingham -	14 0	In one bedstead factory in Birmingham seven "lacquerers" earn wages varying from 8s. to 13s., three "varnishers," from 12s. to 15s., three "blackers" from 17s. 6d. to 18s. 11d., and eight "transferrers" from 8s. to 18s. Omitting the wages earned by one "blacker," who paid a certain sum (which is not given) to an assistant, the mean of the above rates was found to be 13s. The Secretary of the Bedstead Makers' Association stated that wages averaged 15s. a week in most cases. The figure in the table in the arithmetic mean between 13s. and 15s.
Reports, &c., p. 237 -	Tinplate, iron, tin-stamping, and enamel and slate enamel works, at the pit brow and in brickyards.	Wales - -	11 5	Out of a total of 653 women, 49 earn a weekly wage not exceeding 4s. 6d.; 81 between 4s. 6d. and 7s. 6d. (*i.e.*, an average of 6s.); 193 between 7s. 6d. and 10s. 6d. (*i.e.*, a mean of 9s.); and 330 between 10s. 6d. and 20s. (*i.e.*, a mean of 15s. 3d.). To obtain the average the sum total obtained by multiplying 4s. 6d. by 49, 6s. by 81, 9s. by 193, and 15s. 3d. by 330, and adding the results, was divided by 653.
Reports, &c., p. 49 -	Iron enamel works	Birmingham -	11 4	In an iron enamel works at Birmingham three females earn from 6s. to 8s., 13 from 8s. to 10s., nine from 10s. to 12s., seven from 12s. to 15s., six from 15s. to 17s. 6d. Taking the arithmetic mean when wages were said to vary between certain specified limits, the wage was estimated, in the ordinary manner, at 11s. 4d.
Reports, &c., pp. 154–5 - Digest, Group C., Vol. III., p. 22.	White lead industry.	- - -	10 8	The average wages for workers in blue beds is 2s. a day, in white beds 2s. a day, and for stovewomen 2s. 5d. a day. This last is the mean of six different averages varying from 2s. to 3s. In the evidence given before the Commission with reference to the chemical industry it was stated by one witness that women were given 1s. a week in addition to the ordinary wages if they worked five days in any one week. It has therefore been assumed that five days constitute a full week's work. The wages earned by the various classes in any one week would therefore be 10s., 10s., 12s. 1d. The figure given in the table is the arithmetic mean of these rates.
Answers to Schedules of Questions, Group A., p. 12.	Mining - -	Blainscough Hall Colliery Company, Coppull, Lancashire.	10 6	The wages paid to women and girls were stated to average 1s. 9d. per day. The weekly wages have been estimated at the rate of six days' work a week. (This has in every case been the basis adopted in these tables unless any evidence tended to show that any other estimate was more correct.)
Reports, &c., p. 143 -	Cycle manufacture	- - -	10 5	"Ball-grinders" were stated to earn on an average wages varying from 10s. to 14s. (*i.e.*, an average of 12s.); "screw-turners" from 6s. 6d. to 9s. (*i.e.*, an average of 7s. 9d.); "screw-makers" from 9s. to 14s. (*i.e.*, an average of 11s. 6d.). The figure given in the table is the arithmetic mean of 12s., 7s. 9d., 11s. 6d.
Reports, &c., pp. 278–9 -	Sewing machine manufacture.	Scotland -	10 3	Wages in the "japanning" department average 8s. a week. In the polishing, varnishing, and French polishing department they average 8s. 4½d. (*i.e.*, 9s. to 10s., less by 9d. to 1s. 6d. for oils, &c.); 7s. 6d. (beginning on a time wage of 6s. and receiving an increase of 1s. per week per annum till the maximum of 9s. is earned); 10s. 6d. (*i.e.*, 10s. to 11s.). In the shuttle-making department five-sixths of the workers earn 8s., 12s., and 17s., and the rest are time-workers paid wages varying from 6s. to 11s. (*i.e.*, an average of 11s. 8d.). In the needle-making department wages vary from 10s. to 14s. (*i.e.*, an average of 12s.). The average earned in the nickel-plating department is 13s. 9d., one estimate of wages being 14s., another 12s. to 16s. (*i.e.*, an average of 14s.), less 6d. for brushes. The figure given in the table is the arithmetic mean of the averages in the japanning, shuttle-making, needle-making, and nickel-plating departments and the four averages in the polishing, &c. department.
Reports, &c., p. 284 -	Lead works -	,, -	10 3	This is the arithmetic mean between the mean obtained from the employers and employed respectively. The former (*i.e.*, 10s. 6d.) is the mean of six different averages varying from 9s. 2d. to 14s. 5d. The latter (*i.e.*, 10s.) is the mean between four different averages varying from 9s. to 11s.
Reports, &c., p. 49 -	Jewellery trade -	Birmingham -	10 2	In a factory in Birmingham in an ordinary week one woman was earning under 6s.; four from 6s. to 8s. (*i.e.*, an average of 7s.); one from 8s. to 10s. (*i.e.*, an average of 9s.); four from 10s. to 12s. (*i.e.*, an average of 11s.); and three were earning over 15s. From these the average was estimated to be 10s. 2d. It may be noted that the secretary of the Jewellers' Trade Union stated that average girls earned from 8s. to 11s.; polishers (if skilled) might earn as much as 15s.
Digest, Group A., Vol. III., p. 18.	Hand-nail makers	Bromsgrove and Catshill.	10 0	Married women were stated to earn 9s. 8d. on an average, and unmarried women 10s. 5d. The arithmetic mean of these rates is given in the table.
Reports, &c., p. 284 -	Colour works -	Scotland -	10 0	Wages were said to vary from 8s. to 12s. The arithmetic mean has been taken.
Answers to Schedules of Questions, Group A., p. 12.	File-cutters -	Sheffield -	9 6	Wages were said to vary from 7s. to 12s. The arithmetic mean has been taken.
Reports, &c., p. 349 -	Match-makers -	Ireland -	6 6	The greater number were stated to earn from 6s. to 7s. The arithmetic mean has been taken.
Digest, Group A., Vol. II., p. 56, Price, 17,635.	Spike-nail makers	Halesowen District, Worcestershire.	4 6	Wages were said to vary from 4s. to 5s. a week. The arithmetic mean has been taken.

[§ 715.] ages in ades anected th the nufac- re of food.

715. TABLE OF WAGES EARNED BY WOMEN IN TRADES CONNECTED WITH THE MANUFACTURE OF FOOD, 1891–2.

[§ 715.]

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Reports, &c., p. 35	Cocoa factories	Bristol	11 0	21·8 per cent. earn a wage not exceeding 8*s.* a week; 37·3 per cent. earn wages varying from 8*s.* to 12*s.* (*i.e.*, an average of 10*s.*); 36·9 per cent. earn wages varying from 12*s.* to 15*s.* (*i.e.*, an average of 13*s.* 6*d.*); 3·6 per cent. earn wages varying from 15*s.* to 18*s.* (*i.e.*, an average of 16*s.* 6*d.*); and 0·4 per cent. earn wages above 18*s.* The average wage has been determined by adding the totals obtained by multiplying 21·8 by 8, 37·3 by 10, 36·9 by 13½, 3·6 by 16½, and 0·4 by 18, and dividing the result by 100.
Reports, &c., pp. 240–1	Mineral waters, jam factories, wholesale grocers, and confectioners.	Wales	9 3	Five women employed in mineral water and jam factories and by wholesale grocers and confectioners earned weekly wages not exceeding 7*s.* The wages of 20 varied from 7*s.* to 8*s.* (*i.e.*, an average of 7*s.* 6*d.*); the wages of 36 varied from 8*s.* to 10*s.* (*i.e.*, an average of 9*s.*); the wages of 12 from 10*s.* to 12*s.* (*i.e.*, an average of 11*s.*); the wages of eight from 12*s.* to 14*s.* (*i.e.*, an average of 13*s.*); and the wages of two exceeded 14*s.* The figure given in the table was obtained by multiplying 5 by 7, 20 by 7½, &c., adding the results so obtained, and dividing the total by 83.
Reports, &c., p. 95	Mineral waters	South London	9 0	The wages of bottlers in South London were stated to vary from 8*s.* to 10*s.*, although a few earned 12*s.* The arithmetic mean has been taken.
Reports, &c., p. 349	Bacon-curing	Ireland	8 2	This is the arithmetic mean of five different averages ranging from 7*s.* to 10*s.* In a few cases the average was given as such. Where wages were said to vary between certain specified limits the arithmetic mean was taken. In one instance the wages of "cleaners" were said to average 8*s.*, and those of sausage-makers to vary from 8*s.* to 9*s.* The figure in this case was taken as the mean between 8*s.* and 8*s.* 6*d.*
Reports, &c., p. 159	Confectionery trade.		8 0	The average wage in the confectionery trade as a whole was stated to be 8*s.*
Reports, &c., p. 85	„	Bristol	8 0	95·8 per cent. of the women and girls employed were stated to earn wages not exceeding 8*s.* a week; the wages of 4·2 per cent. vary from 8*s.* to 12*s.* (*i.e.*, an average of 10*s.*). To find the average in the table, 95·8 was multiplied by 8 and 4·2 by 10, the results were added and divided by 100.
Reports, &c., p. 326	Biscuit-making, sweet, &c. factories.	Ireland	7 2	This is determined from six different averages, which range from 4*s.* 3*d.* to 10*s.* 6*d.* In some cases the average was given as such, but where wages were said to range between certain specified limits the arithmetic mean was taken.
Minutes of Evidence, Group C., Miss James, 8413, 8427–28, 8513.	Confectionery trade.	London	7 0	Wages were stated to vary from 5*s.* to 9*s.* The arithmetic mean has been given in the table. Miss James stated that "the wages are declining and getting lower and lower." It may be noted that the mean between the average wage in London and Bristol, viz., 7*s.* 4*d.*, differs but slightly from the average given for the trade as a whole.

Wages in the sack-making, rope-making, and rag-picking trades.

716. TABLE OF WAGES EARNED BY WOMEN IN THE SACK-MAKING, ROPE-MAKING, AND RAG-PICKING INDUSTRIES, 1891–2.

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Minutes of Evidence, Group C., Walker, 10,764.	Sack-making	Dundee	15 6	In one factory wages were said to vary from 15*s.* to 18*s.* (*i.e.*, average 16*s.* 6*d.*). In another factory the "worst" were paid 12*s.* to 14*s.*; the "best" 14*s.* to 18*s.* The mean for this factory is therefore 14*s.* 6*d.* The estimate given in the table is the arithmetic mean of 16*s.* 6*d.* and 14*s.* 6*d.*
Reports, &c., p. 296	Rag-pickers	Scotland	10 6	It was stated that 75 per cent. (employed on piecework) are paid from 9*s.* to 13*s.*; 25 per cent. receive from 8*s* to 11*s.* as a time wage.
Reports, &c., p. 242	Sack-sewing	Wales	10 0	This was stated to be the average wage for regular work.
Minutes of Evidence, Group C., Mrs. Hicks, 8275.	Rope-workers	East London	9 0	Wages of ordinary workers (not long in the trade) were stated to average 7*s.* 6*d.*; of skilled workers, 10*s.* 6*d.* The arithmetic mean has been taken. Mrs. Hicks stated that during the last four years wages in this trade have gone down "perhaps not more than 1*s.* a week, taking it all round."
Reports, &c., p. 351	Rope-making	Ireland	7 0	Wages were said to range from 5*s.* to 9*s.* The arithmetic mean has been taken.
Reports, &c., p. 189	Sack-making	Greenock	6 9	The wages of darners (casual workers) were said to range from 7*s.* to 8*s.* a week; 4*d.* a dozen was paid for sack-sewing, and three dozen were said to constitute a hard day's work. The average for a week's work would therefore be 6*s.* The arithmetic mean of 7*s.* 6*d.* and 6*s.* has been taken.
Reports, &c., p. 67	Sack-mending	Liverpool	6 8	Nineteen women were stated to earn a weekly wage not exceeding 4*s.*; the wages of 17 were stated to vary from 4*s.* to 6*s.*; of 15 from 6*s.* to 8*s.*; of 20 from 8*s.* to 10*s.*; and the wages of nine exceeded 10*s.* The average given in the table was obtained by multiplying 19 by 4, 17 by 5, 15 by 7, 20 by 9, and 9 by 10, adding the totals, and dividing the whole by 80. It may be noted that the minimum wage paid to the best and regular workers was stated to be 9*s.* a week (six days). The rest are on piece work and irregular.
Reports, &c., p. 242	Rag-pickers	Wales	6 0	The wages of rag-pickers were stated to average 1*s.* a day. The figure given in the table has been calculated on the basis of six days' work a week.

[§ 716.] [§ 716.

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. *d.*	
Reports, &c., p. 327 - -	Rag-sorting - -	Ireland - -	5 0	Wages were stated to vary from 3*s.* to 7*s.* The arithmetic mean has been taken.
Minutes of Evidence, Group C., Mrs. Hicks, 8336–9, 8353–60; Walker, 10769–70.	Sack-making -	East London -	4 9	1*s.* 7*d.* was stated to be paid for two days' work. On the assumption of a full week's work the weekly wage would therefore be 4*s.* 9*d.* It may be noted, in corroboration of this estimate, that while Mr. Walker stated that sacks which were sewn in London for 1¼*d.* each would be paid ½*d.* in Dundee; the average weekly wage given in the table for Dundee is almost exactly three times the average given for London.
Reports, &c., p. 297 -	Rope-teasing -	Arbroath - -	4 3	In one case the average wage was stated to be 3*s.* 6*d.*; in another to range from 4*s.* to 6*s.* (*i.e.*, an average of 5*s.*). The figure given in the table is the arithmetic mean between 3*s.* 6*d.* and 5*s.*
Reports, &c., p. 297 -	Rope-teasing and sack-sewing.	Scotland -	3 10	The average wages for rope-teasing and sack-sewing were stated to be 3*s.* 6*d.*, 5*s.*, and 3*s.*. The arithmetic mean has been taken.
Reports, &c., p. 297 -	Sack-sewing -	Arbroath -	3 0	

Wages in certain miscellaneou industries.

717. TABLE OF WAGES EARNED BY WOMEN IN MISCELLANEOUS INDUSTRIES, 1891–92.

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. *d.*	
Reports, &c., pp. 18–21 -	Laundresses	London - -	15 8	In one steam laundry the wage was estimated as the arithmetic mean between the average wage for ironers, girls in the drying rooms, day and piece workers in the machine room, packers, and washers. In some cases the average was given as such. Where it was said to vary between certain specified limits the arithmetic mean was taken as the average. The average wage of all women employed in this laundry was thus found to be 15*s.* 4*d.* In a second laundry the daily wages were given for washers, ironers, finery ironers and for girls at polishing machines. In one instance the average was given as such. In the others wages were said to vary between certain specified limits, and the arithmetic mean was taken. Weekly wages were given for preparers and packers, and their daily wages were calculated on the basis of six days' work a week. The average daily wage of the workers in this factory was then found to be 2*s.* 9*d.* (*i.e.*, an average weekly wage of 16*s.* 6*d.*). Similarly, the average wage in a third steam laundry, determined from the average given for washers, markers (children), forewomen, girls, beginners, ironers, packers, and others, was found to be 1*s.* 11½*d.* a day (*i.e.*, 11*s.* 9*d.* a week). In another laundry it appeared from the wages book that one woman earned 25*s.*; five an average of 22*s.* 6*d.*; two an average of 19*s.*; 12 an average of 16*s.* 6*d.*; 13 an average of 13*s.* 6*d.*; six an average of 11*s.*; 11 an average of 9*s.*; seven an average of 7*s.*; and six under 6*s.* The total average, determined by the method which has been previously explained, was found to be 12*s.* 8*d.* In another laundry the average daily wages were given for sorters, packers, washers, ironers, shirt ironers, collar ironers, collar machinists, and folders. In some cases beer and tea were allowed in addition. The monetary value of tea has been taken to be 1*s.* 6*d.* a week as before. Where the quantity of beer allowed was not stated, it has been supposed that half a pint (at 2*d.* a pint) is allowed each day. In calculating the wages these allowances have been taken into account. The average daily wage was thus found to be 2*s.* 9½*d.*, or 16*s.* 8*d.* a week on the basis of six days' work. In the last steam laundry, which has been taken into account in determining the average, the daily averages were obtained or given for sorters, packers, washers, ironers, "takers out," the feeders of the machines, the head drier, and finery and shirt ironers. The average of these was found to be 2*s.* 2*d.* a day (*i.e.*, 13*s.* a week on the basis of six days a week). The arithmetic mean of the six different averages in steam laundries was thus found to be 14*s.* 4*d.* a week. Similarly, estimating the monetary value of beer and tea as before stated, the average wages earned in hand laundries were found to be 17*s.* The estimate given in the table is the arithmetic mean of the wages for steam and hand laundries.
Answers to Schedules of Questions, Group C., p. 853. Minutes of Evidence, Group C., Miss Mears, 8049, 8099, 8102–3.	Upholsteresses -	London - -	15 0	In the Answers to the Schedules of Questions addressed to the Upholsteresses' Society (West End, Westminster and City) it was stated that the average wage of adults was 15*s.* This was corroborated by a statement given by Miss Mears to the effect that wages average 15*s.* in some houses and 17*s.* 4*d.* in others. The average wage she stated to be 15*s.* It may be noted that the same witness gave 15*s.* as the average wage 10 years ago.
Reports, &c., p. 241 -	Unloading boats (potatoes).	Cardiff - -	14 3	The rates in one case varied from 2*s.* to 3*s.* a day (*i.e.*, mean of 2*s.* 6*d.*). In another case they varied from 2*s.* to 2*s.* 6*d.* (*i.e.*, mean of 2*s.* 3*d.*). The weekly wage in the table was obtained on the basis of six days' work a week.
Reports, &c., p. 96 - -	India-rubber works.	London -	13 9	For "sundries" 10·2 per cent. earn a wage not exceeding 6*s.*; 5·1 per cent. earn an average of 7*s.* (*i.e.*, 6*s.* to 8*s.*); 10·2 per cent. earn an average of 9*s.*; 20·4 per cent. earn an average of 11*s.*; 27·1 per cent. earn an average of 13*s.* 6*d.*; 15·2 per cent. earn an average of 16*s.* 6*d.*; 11·8 per cent. earn an average of 19*s.* 6*d.* By multiplying 10·2 by 6, 5·1 by 7, &c., adding the results, and dividing the whole by 100, the average wage was found to be 12*s.* 6*d.* For coats, 1·8 per cent. earn wages not exceeding 6*s.*; 9·3 per cent. earn an average of 7*s.*; 13 per cent. earn an average of 9*s.*; 9·3 per cent. earn an average of 11*s.*; 14·8 per cent. earn an average of 13*s.* 6*d.*; 24 per cent. earn an average of 16*s.* 6*d.*; 13 per cent. earn an average of 19*s.* 6*d.*; 7·4 per cent. earn an average of 23*s.* 6*d.*; and the wages of 7·4 per cent. exceed 25*s.* By multiplying 1·8 by 6, 9·3 by 7, &c., adding the results, and dividing the whole by 100, the average wage was found to be 15*s.* The figure given in the table is the arithmetic mean of 12*s.* 6*d.* and 15*s.*

[§ 717.] [§ 717.]

Reference.	Class of Work.	District.	Mean of Returns collected. (Weekly Wages.)	REMARKS.
			s. d.	
Reports, &c., pp. 295–6 -	Rubber and vulcanite works.	Scotland - -	12 0	In one case the wages in vulcanite works were stated to vary from 8*s.* to 12*s.* (*i.e.*, an average of 10*s.*). In another case the average wages were given for pasters and machinists, and for workers in the shoe and packing departments. The mean wage of these four classes was found to be 14*s.* The figure given in the table is the arithmetic mean of 14*s.* and 10*s.* It may be noted in the first case that the wages of men were stated to be 50 per cent. higher than those of women.
Reports, &c., p. 275 - -	Brush-making -	Glasgow - -	11 11	In shop 139 wages were said to vary from 10*s.* to 13*s.*, and 11*s.* 6*d.* has been taken as the average. In the Scottish Co-operative Works, Shieldhall, wages were said to vary from 8*s.* 6*d.* to 20*s.* 6*d.*, and 14*s.* 6*d.* has been taken as the average. A third estimate was determined from 14 different averages given by various workers, which varied from 8*s.* 6*d.* to 18*s.* In some instances they gave the average as such. Where wages were said to vary between certain specified limits, or where the average was given separately for busy and slack times, the arithmetic mean has been taken. This third estimate was thus found to be 9*s.* 11*d.*, and the figure given in the table is the arithmetic mean of 11*s.* 6*d.*, 14*s.* 6*d.*, and 9*s.* 11*d.*
Reports, &c., p. 35 -	Laundresses -	Bristol - -	11 5	16·6 per cent. of the women were stated to earn a wage not exceeding 8*s.*; 47·6 per cent. earned an average of 10*s.*; 20·2 per cent. an average of 13*s.* 6*d.*; 13·1 per cent. an average of 16*s.* 6*d.*; and the wages of 2·5 per cent. exceeded 18*s.* The average obtained by multiplying 16·6 by 8, 47·6 by 10, &c., adding the results, and dividing by 100, was found to be 11*s.* 5*d.*
Reports, &c., p. 69 - -	Soap factory -	Liverpool -	11 0	It was stated that wages varied from 10*s.* to 12*s.* for "a girl who knew her business." The arithmetic mean has been taken.
Reports, &c., p. 69 -	Box-makers -	„ -	11 0	The wages of average girls was stated to vary from 10*s.* to 12*s.*, and the arithmetic mean has been taken.
Answers to Schedules of Questions, Group B., p. 13.	Dock, wharf, and riverside labour.	Bermondsey, Rotherhithe, Deptford, and Wapping.	10 6	The wages of women and girls were stated to range from 3*s.* to 18*s.* The arithmetic mean has been taken.
Reports, &c., p. 286 -	Tobacco factories	Scotland - -	10 6	The average for "spreaders" was determined from seven different averages varying from 5*s.* 6*d.* to 8*s.*, and was found to be 6*s.* 8*d.* The average for "strippers" (10*s.* 4½*d.*) was determined from eight different averages varying from 9*s.* 6*d.* to 11*s.* 6*d.* The average for "plaiters" and "spinners" (14*s.* 8*d.*) was determined from eight different averages varying from 13*s.* 6*d.* to 15*s.* 6*d.* The estimate in the table is the arithmetic mean of 6*s.* 8*d.*, 14*s.* 8*d.*, and 10*s.* 4½*d.*
Reports, &c., p. 58 -	Saddlery and harness.	Walsall - -	10 4	In the first factory 19·2 per cent. earn wages not exceeding 6*s.*; 11·5 per cent. earn an average of 7*s.*; 17·3 per cent. earn an average of 8*s.*; 27 per cent. earn an average of 11*s.*; and the wages of 25 per cent. were between 12*s.* and 18*s.* By multiplying 19·2 by 6, 11·5 by 7, &c., adding the results, and dividing by 100, the average was found to be 10*s.* 2*d.* In a second factory 9·5 per cent. earn wages not exceeding 6*s.*; 14·6 per cent. earn an average of 7*s.*; 19 per cent. earn an average of 9*s.*; 33 per cent. earn an average of 11*s.*; and 23·9 per cent. earn an average of 15*s.* By multiplying 9·5 by 6, 14·6 by 7, &c., adding the results, and dividing by 100, the average was found to be 10*s.* 6*d.* The estimate given in the table is the arithmetic mean between 10*s.* 2*d.* and 10*s.* 6*d.*
Answers to Schedules of Questions, Group C., pp. 856–7.	Laundresses -	Kensal Green, Hackney, Wandsworth and Battersea, Marylebone, North and South Fulham.	9 10	This is the arithmetic mean of the averages given for ironers, washers, folders, sorters, and packers. The averages were stated to vary between certain limits, and the arithmetic mean was in each case taken. In the case of folders the daily wage was given, and the weekly wage was calculated on the basis of six days' work.
Reports, &c., p. 63 -	Potteries -	Staffordshire -	9 6	16·3 per cent. earn under 6*s.*; 15·9 per cent. earn an average of 7*s.*; 25·2 per cent. earn an average of 9*s.*; 28·3 per cent. earn an average of 11*s.*; 10·2 per cent. earn an average of 13*s.* 6*d.*; 2·7 per cent. earn an average of 16*s.* 6*d.*; 1·4 per cent. earn 18*s.* and upwards. By multiplying 16·3 by 6, 15·9 by 7, &c., adding the results, and dividing by 100, the average was found to be 9*s.* 6*d.*
Reports, &c., p. 281 -	Pipe factories and potteries.	Scotland -	9 4	In the pipe factories wages were in one instance said to vary from 7*s.* to 12*s.* (*i.e.*, an average of 9*s.* 6*d.*), and in another case to average 8*s.*, full time. In two cases "household cleaning" was said to receive wages varying from 5*s.* to 8*s.*; in another case wages were said to range from 4*s.* 6*d.* to 10*s.* Piece-workers on "monkey and jolly machines" average 11*s.* In the dressing department of pottery work the average is 8*s.*; in the transferring department, 12*s.* or 12*s.* 6*d.*; in the decorative department, 12*s.* 8*d.*; in the clay department, 8*s.* 6*d.*; for kneading clay and turning lathes for the men, 10*s.* 4*d.*; and other women were stated to earn an average of 9*s.* The mean of all these different rates was found to be 9*s.* 4*d.*
Reports, &c., p. 239 -	Steam laundries and dyeworks.	Wales - -	9 2	Sixty-three women earn a wage not exceeding 8*s.*; 71 earn wages varying from 8*s.* to 10*s.* (*i.e.*, an average of 9*s.*); 44 earn wages varying from 10*s.* to 12*s.* (*i.e.*, an average of 11*s.*); and two earn wages varying from 12*s.* to 20*s.* (*i.e.*, an average of 16*s.*). By multiplying 63 by 8, 71 by 9, &c., and dividing the whole by 180, the average was found to be 9*s.* 2*d.*
Reports, &c., p. 68 -	Cigar and tobacco factories.	Liverpool -	8 9	38·8 per cent. earn under 6*s.*; 19 per cent. an average of 7*s.*; 15·1 per cent. an average of 9*s.*; 13·5 per cent. an average of 11*s.*; 7·1 per cent. an average of 13*s.* 6*d.*; 3·3 per cent. an average of 16*s.* 6*d.*; 2 per cent. an average of 19*s.* 6*d.*; 1·2 per cent. an average of 28*s.* 6*d.* By the ordinary method the average was calculated to be 8*s.* 9*d.*
Reports, &c., p. 241 -	Tobacco, pipe, and fuse factories.	Wales - -	7 7	160 women earn wages not exceeding 7*s.*; 60 earn an average wage of 7*s.* 6*d.*; 52 earn an average wage of 9*s.*; and six earn wages exceeding 10*s.* By multiplying 160 by 7, 60 by 7½, &c., adding the results, and dividing by 278, the average wage was found to be 7*s.* 5*d.*
Reports, &c., p. 327 -	Potteries - -	Ireland - -	7 6	Wages were said to vary from 3*s.* to 12*s.* The arithmetic mean has been taken.
Answers to Schedules of Questions, Group C., p. 67.	Cocoa fibre matmakers.	England -	7 0	

[§ 718.] Wages in the so-called "sweated" trades.

718. TABLE OF WAGES OF WOMEN, OBTAINED FROM REPORTS OF THE SELECT COMMITTEE OF THE HOUSE OF LORDS ON THE SWEATING SYSTEM. [§ 718.

Reference.	Class of Work.	District.	Mean of Statements of Wages made. (Weekly Wages.)	REMARKS.
			s. d.	
Burnett, statement in Report to Board of Trade on Sweating System at East End of London. Moses. 8648-9, 8653. 8830, 8847-8. 8911-2.	Button-hole workers.	London - -	22 6	In Mr. Burnett's report he stated that he was informed that button-holers in Mr. Moses's shop earned as a rule 3s. 6d. a day, and on very good days 4s. Mr. Moses stated that his button-holers earned from 3s. 6d. to 5s. a day, and on an average 3s. 9d., after deducting for sewing materials. The weekly average has been estimated on the basis of six days' work a week.
Fourth Report. Platt, 31,112-3, 31,116-8, 31,121-2; Gaddis, 31,155-82, 31,186-92, 31,214-6.	Waterproof trade	Manchester -	19 7	Girls and women employed by the middlemen (Jews), earn by piece-work during the six months of the busy season from 18s. to 20s. a week (that is, an average of 19s.). Miss Gaddis stated that at present (in the busy season), she earns by piece-work from 17s. to 23s. or 24s. a week (*i.e.*, an average of 20s. 3d.). The arithmetic mean of these averages is given in this table.
First and Second Reports. G. D. Ramsay, C.B.; 10,860-1, 10,872-4, 10,877-9, 11,068-71, 11,133-5, 11,190-2, 11,213-22.	Government contracts. (Army and Militia clothing).	Pimlico factory	19 2	The average weekly wage (including holidays) of indoor piece-workers for the year ending March, 1888, was 22s. 11¾d. for machinists, and 14s. 3d. for sewers. For the week ending November 7th, 1888, it was 24s. 3d. for the first class, and 15s. 3d. for the second class. The estimate given in the table was the arithmetic mean of the averages similarly obtained for machinists and sewers separately.
Fourth Report. Oppenheim, 29,230-43, 29,255-6; Burman, 29,471, 29,476-86.	Tailoring - -	Manchester -	18 7	Wages of machinists in one case were said to vary from 15s. (for sleeve-making) to 42s. (*i.e.*, an average of 28s. 6d.). The lowest wage paid by Mr. Burman to fellers was 10s. a week not working full time, and up to 22s. when working a full week. The arithmetic mean has been taken as the average (*i.e.*, 16s.). One witness, who worked with her sister and a stranger upon piece-work for a middleman, stated that they shared their earnings, which in the busy times amounted to as much as 50s. and 55s. per week. Her own share of this was 25s., she was the quickest worker of the three. In the slack time she had from 6s. to 10s. a week for herself. Calculating therefore upon the ratio of witness's earnings to the aggregate earnings of the three women, the earnings in slack times would be 16s. 9½d.; the average given is therefore the mean of 16s. 9½d. and 52s. 6d. divided by 3 (*i.e.*, 11s. 6d.). The final estimate given in this table is the arithmetic mean of 28s. 6d., 16s., and 11s. 6d.
Fourth Report. Mitchinson, 29,947-8, 29,953-62, 29,969-72; Sweeney, 30,213, 30,234, 30,244-7; Joseph, 30,626-30; Denton, 30,703-6.	„ - -	Leeds - -	17 10	This estimate refers to fellers, machinists, and finishers. In three instances the daily averages only were given, and the weekly averages have been calculated on the basis of six days' work a week. One witness (a feller) earned from 14s. to 16s. a week all the year round; she worked on piece-work for a middleman. These wages she considered to be about the same as those earned by other women on "order" work, the best paid class of work. There were however, many who could not earn as much. The arithmetic mean has been taken as the average. Mr. Joseph stated that the average wages of machinists varied from 15s. to 32s. all the year round. The arithmetic mean has been taken (*i.e.*, 23s. 6d.). Mr. Denton stated that the last weekly average for machinists in his firm was 21s. 8d. The actual last weekly average for finishers was 24s. 2d., but in some cases the finishers paid away 5s. a week to girls under them. The average net wages after paying for sewings, &c., were 21s. Mr. Sweeney gave the average daily wages of machinists, fellers, and finishers as 3s. 6d., 1s. 6d., and 2s. 3d. respectively. The average is in each case the arithmetic mean of the maximum and minimum rate given. The final estimate is the arithmetic mean of the seven weekly averages thus obtained.
Fourth Report. Goodman, 27,680-2, 27,699, 27,720-1, 27,724-5; Block, 27,850, 27,855-9, 27,870-4, 27,877-81, 27,885-96; Balsam, 27,991-5, 28,003-12; Bernstein, 28,055-64.	„ - -	Liverpool -	17 1	The estimate given is determined from seven different averages, four of which were daily (and varied from 1s. 3d. to 4s. 3d.), and the remainder weekly (and varied from 16s. 6d. to 30s.). The averages referred to machinists, button-holers and binders, and fellers. The daily average for machinists was obtained by taking the arithmetic mean of specified averages, which were based upon the investigations of Mr. Goodman and another member of the Liverpool Operative Tailors' Society, who were appointed to enquire into sweating and to report to the branch committee. Where the weekly averages were given, they have been taken to be the arithmetic mean of the highest and lowest rates given multiplied by 4½, since it was stated that in very many cases the master-sweater does not, except in the busiest season, employ his hands on Mondays and Tuesdays. It has therefore been assumed, that on an average, the women work 4½ days a week.
Appendix H., Minutes of Evidence given before the House of Lords Committee on the Sweating System, Vol. II. Burnett, 17,242.	„ -	London - -	15 0	This estimate includes the averages obtained for basters, button-hole workers, fellers, machinists, assistants (girls) and apprentices in the tailoring trade, and for machinists and trouser-makers in the trouser-making trade. In some instances both piece and time wages were given in the Appendix, and the arithmetic mean was taken. Where different time wages were given, the arithmetic mean was again taken. In each case the arithmetic mean was also taken between the average given by Mr. Burnett and that obtained from Appendix H. It may be noted that the averages given by Mr. Burnett were obtained from schedules distributed and corrected and in part filled up after personal communication with employers by the Labour Correspondent of the Board of Trade. The mean given in this table was the arithmetic mean of the averages finally obtained for the different classes of labour specified.
Fourth Report. Abrahams, 27,180, 27,186, 27,196-212; Rosenberg, 27,414-8, 27,421, 27,442, 27,461-3, 27,522-6.	„ -	Birmingham -	14 5	In one case wages were stated to vary from 12s. to 20s., and the arithmetic mean has been taken. Apprentices in about two years can earn as much as 12s. a week. The second estimate obtained (12s. 11d.) is the arithmetic mean of the average of the highest and lowest earnings during four weeks of each hand in the witness's employ. The earnings were as follows:—

	Lowest.	Highest.
Machinists:	s. d.	s. d.
Coat	8 10	25 1
Trouser	5 1	23 7
Vest	9 0	22 6
Juvenile coat	7 2	20 8
Juvenile knickers	10 3	14 10
Finishers:		
Coat	6 8	15 11
Trouser	3 6½	21 6
Juvenile vest and coat	6 1	17 0
Juvenile knickers	5 1	10 4

[§ 718.] [§ 718.]

Reference.	Class of Work.	District.	Mean of Statements of Wages made. (Weekly Wages.)	REMARKS.
			s. d.	
Fourth Report. Abrahams, &c.—*cont.*	- - -	- - -	—	The trouser-finisher hand, earning 21*s.* 6*d.* a week, paid a learner 4*s.* a week. This, however, has not been taken into account in calculating the mean, since the witness states that "Virtually "speaking, we engage them for three months for nothing, but "invariably we find that these machinists, out of their own "generosity, give them 1*s.* to 3*s.* a week as they advance." The witness also stated that it was exceptional for the earnings to be so small as the lowest rates given, and that the earnings of the finishers were attributable to the necessary absence of machinery, and therefore to comparative slowness in the rate of working. The arithmetic mean between 16*s.* and 12*s.* 11*d.* has been taken.
Fourth Report. Letham, 25,828-32, 25,835-7; Carey, 25,879-93; Samuel, 25,984-99; Pinto, 26,085-7, 26,095, 26,099-108; Sedgwick, 26,452.	Tailoring - -	Glasgow -	13 9	This figure refers to practical sewers, button-holers, machinists, fellers, basters, sewing-women, and tailoresses. It is the arithmetic mean of nine different averages varying from 8*s.* 6*d.* to 20*s.* a week, and 5*s.* a day. In some instances the average was given as such, where wages were said to range between certain specified limits, the arithmetic mean has been taken. Weekly wages were obtained from the daily wages on the assumption that six days' work was done in one week. Where, however, the number of days worked on an average was given, the weekly wage was determined from the given data. It may be noted that Mr. Pinto stated that the increase in wages since 1880 was attributable to the greater demand for skilled labour, especially in the ready-made trade.
First Report. Rev. J. Munro, 1378, 1385-7, 1394, 1411; Walker, 31,529-32.	Tailoresses	Working Women's Co-operative Association.	13 0	The Association pays machinists 16*s.* to 18*s.* a week (*i.e.*, an average of 17*s.*), basters 12*s.*, women pressers 12*s.*, and finishers 10*s.* to 12*s.* (*i.e.*, an average of 11*s.*). The indoor women have their "trimmings" provided for them; the sewing machines are also let on much easier terms than by the dealers. It was stated that these prices are 25 per cent. more than those paid by the sweaters.
Fourth Report. Shannon, 26,887-9, 26,893-5, 26,897-915, 26,942; Davis, 27,327-9, 27,344, 27,348.	Tailoring - -	Walsall - -	12 7	The net average wages of 2 machinists for three years were given as follows:— 1886 - (No. 1) 12*s.* 5*d.* (No. 2) 10*s.* 9*d.* (Average) 11*s.* 7*d.* 1887 - (No. 1) 16*s.* 0*d.* (No. 2) 13*s.* 4½*d.* (Average) 14*s.* 8½*d.* 1888 - (No. 1) 17*s.* 8½*d.* (No. 2) 14*s.* 8½*d.* (Average) 16*s.* 2½*d.* Some averaged higher than this. The women found their own trimmings. The wage has been taken to be the mean of 11*s.* 7*d.* 14*s.* 8½*d.*, and 16*s.* 2½*d.* (*i.e.*, 14*s.* 2*d.*). The amount of deductions depends upon the class of work. It may be noted that when machinists have learners under them, they have to pay, out of their wage, a wage to the learner in proportion to their own earnings. Mr. Davis stated that wages in the tailoring trade varied from 6*s.* (not including learners) to 16*s.* The figure given in the table is the arithmetic mean of 14*s.* 2*d.* and 11*s.*
Fourth Report. Smith, 26,811-6, 26,838-42, 26,850.	„ - -	Dudley - -	12 6	Last weekly average (for indoor work) of 48 girls who are employed at one of the firm's branch factories, and who do the smaller work—boys' suits and trousers.
Fourth Report. Gall, 28,455-61, 28,487-8; Freeman, 28,635-8, 28,646, 28,661-3; Ososki, 28,697-712.	„ - -	Sheffield - -	12 0	Mr. Gall stated that the wages of machinists varied from 10*s.* to 18*s.* (*i.e.*, a mean of 14*s.*). Wages paid by Mr. Freeman to the four women employed by him were as follows:—14*s.*, 10*s.*, 9*s.*, 7*s.*, and witness considered this wage the average wage of women who had been with him for three years. Finally Mr. Ososki stated that the rates paid to the women in his employ were 20*s.*, 13*s.*, 12*s.*, 10*s.*, 9*s.*, 8*s.*, 5*s.*, 4*s.*, and 3*s.* 6*d.* The last three rates were the wages paid to learners. In calculating the mean (*i.e.*, 12*s.*), these rates have therefore been omitted. The figure given in this table is the arithmetic mean of the three estimates, viz., 14*s.*, 10*s.*, and 12*s.*
Third Report. Booth, 23,468, 23,472-3; Tomlin, 24,099-104; Woodcock, 24,302-16, 24,319; Leckie, 24,428-31, 24,436-43, 24,453 Mason, 24,542.	Military harness and accoutrements industry.	- - -	9 10	This was determined from nine different averages, varying from 5*s.* 4½*d.* to 13*s.* 6*d.* In some instances the average was given as such, but, generally speaking, wages were said to vary between certain specified limits, and the arithmetic mean was taken.
First Report. Rev. J. Munro, 1373, 1385-7, 1394, 1411; Walker, 31,529-82.	Shirt trade - -	Working Women's Co-operative Association.	8 0	The earnings of finishers in the shirt trade amount to about 1*s.* 1*d.* and 1*s.* 7½*d.* a day (*i.e.*, an average of about 1*s.* 4*d.*). On the assumption of six days' work a week, the weekly wage would amount to 8*s.*
First Report. Rev. W. Adamson, 2580, 2684; Simmons, 56364-3, 5669-72.	Dress trimming industry.	- - -	7 9	Rev. W. Adamson stated that the daily wages were said to vary from 8*d.* to 1*s.* 2*d.* (*i.e.*, an average of 11*d.*), or a weekly average, on the assumption of six days' work a week, of 5*s.* 6*d.* The average earnings of a good hand throughout the year were estimated by Mr. Simmons at 10*s.* Besides this, a woman can make more by taking work home. The estimate given in the table is the arithmetic mean of 5*s.* 6*d.* and 10*s.*
Third Report. Juggins, 17,861, 17,870, 18,096-104; Rev. H. Rylett, 18,504. Addleton, 18,785-7, 18,808; Parish, 18,831-7, 18,843-5; Wright, 18,925-8, 18,930-1, 18,950-2; Tibbetts, 19,055-7, 19,066-74; Parsons, 19,180, 19,182, 19,193-4, 19,199-203, 19,243-6, 19,252-5; Green, 21,117 (*see* Appendix F.), 21,150; Hoare, 23,128-30, 23,086; Walker, 21,288-90; Bassano, 22,808-12; Green, 21,151.	Chainmaking industry.	- - -	6 8	This was determined from 14 different averages varying from 3*s.* 8*d.* to 11*s.* 8*d.* Generally speaking, to determine these separate averages, the arithmetic mean was taken between the maximum and minimum rates specified. Where the gross wage was given, the net wages were determined by deducting the amount due to firing cartage, stall, repairing tools, &c.
First Report. Casey, 1620-31, 1649-51; Liddle, 1671-88; Attewell, 1692, 1708-13, 1725.	Shirt trade - -	- - -	5 7	This wage has not taken into account the cost of hiring a machine. In one instance, the witness (making plain run-ups) earned 1*s.* 2*d.* a day, being paid at the rate of 4*d.* a dozen. She pays about 1*s.* to 1*s.* 3*d.* a week for cotton, &c., and has 7*s.* left. Some women earn more than she does. Another witness gave her gross weekly earnings as varying from 5*s.* to 7*s.*, out of which (excluding the machine) she had to pay 9*d.* for trimmings. The net earnings of another witness were 4*s.* 6*d.* If she can earn 5*s.* it costs her 6*d.* for cotton, if 7*s.* 6*d.*, 9*d.*

[§ 718.] [§ 718.

Reference.	Class of Work.	District.	Mean of Statements of Wages made. (Weekly Wages.)	REMARKS.
			s. d.	
Third Report. Hackett, 20,283-314; Brettle, 20,500, 20,511-9; Green, 20,994 (Appendix F.); Reay, 21,410-2; Spany, 21,520, 21,525, 21,527, 21,541; Cole, 22,090-3, Hoare, 23,089-92; Cox, 20,471-2; Smith, 20,590-1.	Nail trade - -	- - -	5 6	This wage is determined from 10 different averages varying from 3s. 6d. to 11s. 9d. Deductions for "breeze," "carriage," &c., have in all cases been taken into account. The averages include those earned at common nailmaking, hurdle or gate nailmaking, spike nail making, &c.
Third Report. Juggins, 20,712-5, 20,757.	Gun-lock filing -	Darlaston - -	5 0	5s. a week was stated to be the net earnings of good workers. 2s. for tools, files, pins, and shop rent deducted. Only three or four women are employed in this trade, but they are paid at the same price as the men.
First Report. Rev. W. Adamson, 2568, 2593-9, 2623.	Matchbox making trade.	- - -	4 6	The matchbox firms employ a certain number of people, and these sublet the work to women who make the boxes at 1½d. and 1¾d. a gross, finding their own paste. A woman, if she works all day long, day after day, and employs her children when they are away from school will be able to earn from 4s. to 4s. 6d. and sometimes 5s. a week. The arithmetic mean has been taken.
First Report. Reubenson, 5282-3, 5292; Lakeman, 16,675.	Fur-making trade	- -	4 4	One large firm in Commercial Street, employing 100 hands, male and female, pays from 2s. 6d. to 5s. a week to the females, who work sometimes from 7 a.m. to 12 p.m., and perhaps all night on Thursdays. Mr. Lakeman stated that 5s. a week is paid to the women for 12 hours work a day. The estimate given in the table is the arithmetic mean between 5s. and 3s. 9d., (*i.e.*, 4s. 4d.).
	Mean of estimates given above	-	s. d.* 12 0	This is obtained by finding the arithmetic mean of the above estimates.

* For further information with regard to this table *see* footnote (1) to page 477, *supra*.

2. HOURS.

STATEMENT OF HOURS.

Difficulty of subject.

719. Many difficulties peculiar to the employment of women combine to make a tabular statement of the hours of labour impossible. A consideration of the various returns furnished to the Commission showed that to draw the hard-and-fast line necessary for any tabular statement would be misleading. In the first place, there are two large classes respecting which little or no information has been obtained. These are domestic servants and women employed in home industries. For obvious reasons it is quite impossible to gauge the hours of labour of domestic servants. With regard to the second class, one of the Lady Sub-Commissioners writes, that "the difficulty of "estimating the hours worked by home workers is "insuperable."(1) Even when the nominal hours of work are stated, many deductions must be made for the numerous interruptions to which women, especially when married, are subject in their own homes. Most of the statements on this head were too vague for insertion in a table. In the case of those industries which are regulated by the Factory Acts, a further difficulty arises. Many statements, especially in the written evidence, are of a very indefinite character, and do not mention whether the hours given are inclusive or exclusive of meal times. The intervals allowed for meals also vary in different cases to such an extent that, even when it is clear that the hours given must include meal times, as otherwise the Factory Acts would be habitually infringed, it is impossible to ascertain the length of time that must be deducted. In the Answers to the Schedules of Questions, it frequently happens that where men and women are working together at the same or different employments, one statement of hours alone is given, whereas in many cases it is improbable that they are employed for the same length of time. Some of the evidence, moreover, collected by the Lady Sub-Commissioners referred to a state of things which existed some years ago. Again, sometimes the daily and in other cases the weekly average is given, and a comparison of the various returns is thus made still more difficult. This is especially remarkable with regard to the information collected by the Lady Sub-Commissioners as to the hours worked by laundresses in the neighbourhood of London and in Wales. The weekly average rarely exceeds the limits allowed by law in non-textile factories, but, as laundries are often not worked more than four or five days in the week, the daily average generally exceeds these limits. A further difficulty is raised by the conflicting statements of various witnesses, both employers and employed. The hours of labour in many industries also vary considerably in different parts of the country, owing to local causes. In several cases the information obtained is far from being representative, but relates to only one or two localities; consequently the average throughout the whole industry cannot be ascertained. Many of the trades in which women are employed are also largely seasonal, and the statements given thus apply to only part of the year, while the slack periods in different industries vary to a very great extent. For the reasons given above, it appears impossible to attempt anything beyond a very general statement as to the hours usually worked in industries in which women are employed.

(1) p. 37.

Daily and weekly average.

720. The hours of labour for women and girls employed above ground in connection with collieries are restricted by the Coal Mines Regulation Act of 1887 to 10 a day or 54 a week. At Blantyre the hours are eight for five days in the week, exclusive of meal times.(1) All other industries in which women are engaged to any great extent may be classed under two heads: those which are regulated by the Factory and Workshop Acts, and those which are not so regulated. The first group includes the subdivisions of textile and non-textile factories, where mechanical power is used, and workshops, where it is not used. Under the second head the numerous class of shop assistants, waitresses, laundresses, and all persons engaged in home industries are grouped, whose labour is not yet protected by legislation.

(a.) Industries under Factory Acts.

(i.) Textile factories.

(*a.*) The hours of labour in textile factories must not exceed 10 a day or 56½ a week, exclusive of meal-times. It appears from the information furnished to the Commission and to the Lady Sub-Commissioners that, with a few exceptions, the full hours allowed by the Factory Acts are worked in the manufacture of cotton, wool, silk, linen, flax, jute, and hemp. In Coventry the standard hours for throwers and preparers in the silk trade are only 46½.(2) A nine-and-a-half hours' day has been instituted in a linen factory at Dunfermline. The general opinion of both employers and employed with regard to the new system was expressed by one worker: "it's fine i' the noo, if it only lasts."(3) In the hosiery trade the average hours worked appeared to be rather below those allowed by the Factory Acts; one return mentions a day of eight hours.(4) Work may be legally carried on for 10½ hours a day or 60 a week in non-textile factories and workshops, but in most cases, as with the textile industries, it appears that the full legal time is not actually worked. A close examination of the numerous returns furnished to the Commission and the Lady Sub-Commissioners leads to the conclusion that in many establishments the normal working day is even shorter than that fixed for textile factories. "In hardly a single case in my inquiries," writes one of the Lady Sub-Commissioners, "have I "come across one in which over 55 hours are worked, "50 to 54 hours being the rule."(5) The standard hours for tailoresses, corset, boot and shoe makers, upholstresses, bedstead-makers, tobacco-workers, and women employed

(ii.) Non-textile factories and workshops.

(1) p. 186. (2) p. 136. (3) p. 188. (4) Group C., Digest, Vol. II., p. 16; Answers to Schedules of Questions, pp. 49, 50. (5) p. 85.

[§ 720(a).] in confectionery and dye-works appear to be less than 56, generally speaking. About 54 hours are the average in the printing trades. The hours of paper-makers, hat-makers, and rope-makers range for the most part between 56 and 60. In pottery and brick-making the hours of actual labour vary from 8 to 10½ a day. Lead workers are employed nine hours a day.(1) Women and girls engaged in chain and nail making rarely work in factories, but usually in small domestic workshops. Unless they are working only with the members of their own family, their labour is restricted by the Factory and Workshop Acts. A large number, however, work in their own homes, and are thus to a great extent outside the scope of these Acts, which in the case of domestic workshops only apply to children and girls under 18.(2)

(b.) *Industries not under Factory Acts.* (i.) *Shops and restaurants.*

(b.) With the exception of the Shops Hours' Act, which only applies to girls under 18, the employment of shop assistants and barmaids is not legally restricted in any way. This Act limits the hours of labour of young persons to 74 a week, including meal-times. The hours worked by shop assistants vary to an enormous extent in different establishments and localities. The secretary of the National Union of Shop Assistants, which includes both men and women, stated that the average in retail shops throughout the country was from 80 to 84 a week. This statement was subsequently denied by another witness; and it would appear to be hardly borne out as far as women are concerned by the evidence collected by the Lady Sub-Commissioners on the subject. The principal shops in large towns generally work far shorter hours, but "the further you get away from the "centre of the city the smaller the shops will be, and the "longer the hours will be."(3) In Wales, which was called "the best part of the kingdom with regard to "closing," the average is 54, exclusive of meal-times, while in Scotland 65 hours were said to be the minimum. (4) It is exceedingly difficult to ascertain the average hours worked by barmaids and waitresses in restaurants, but in most cases they apparently range between 60 and 80 a week, after the time allowed for meals, dressing, and rest has been deducted. It appears from evidence collected by the Lady Sub-Commissioners, that "most of the "contractors are aiming at a standard of 10 hours a day, "and something less on Sunday." In temperance refreshment rooms the hours per week are generally shorter, as there is no Sunday work. The Aërated Bread Company is attempting to reduce the hours of the waitresses to 56, including meal-times, and the Cork Refreshment Company has a uniform standard of 58 hours, including meals. It is stated that those working more than 60 hours in these rooms are generally older women who superintend the girls. In a few cases the hours worked in the Aërated Bread Company's depôts are as low as 46½.(5) Neither steam nor hand laundries are regulated by any legal restrictions with regard to hours. It appeared from the information collected by the Lady Sub-Commissioners, as regards the laundries visited in England, Wales, and Ireland, that the normal hours worked per week do not, as a rule, exceed those allowed by the Factory Acts. But laundries are rarely worked six days in the week, and it was found that in almost all those cases the hours worked per day were in excess of the limit established by law in protected industries.(6) On the other hand it would seem, from a report recently published by the Council of the Women's Protective and Provident League of Glasgow, that the laundries in Glasgow are usually worked six days a week, and that the total number of weekly hours is in most cases very much in excess of 60. It is impossible to make an even approximate statement of the hours of home workers, as has already been shown, owing to the numerous interruptions to which they are liable, and the difficulty of obtaining reliable information.

(ii.) *Laundries.*

(iii.) *Home industries.*

GRIEVANCES CONNECTED WITH HOURS.

Excessive hours of women not under Factory Acts.

721. From the general statements given above, it is clear that there is a marked distinction between the average hours worked in industries regulated by the Factory Acts and those worked in other employments. For example, it appears from the information obtained that the hours of shop assistants have, generally speaking, been reduced in recent years, but in spite of this they have been shown to be far in excess of the limits set by the Factory Acts. Individual instances were brought under the notice of the Lady Sub-Commissioners of waitresses in restaurants working 90 and 93 hours per week, and "it was further stated by "the secretary of the Shopkeepers' and Assistants' Union, "that in restaurants where smoking concerts and public "suppers are held the hours may rise during some weeks "to 96, 99, and 102 in the winter season." The Union recently investigated a case where a girl under 18 worked 110 hours in seven days in a confectioner's shop.(1) Laundresses, also, in many cases work excessive hours, and, could the hours of home-workers be ascertained, they would probably be found in many cases to be in excess of any of those above mentioned. Several circumstances contribute towards the excessive hours worked in these industries. One cause is the general absence of organisation among women. This question is further dealt with below under the head of "Organisations." Another cause is the enormous amount of competition in most industries where women are largely employed. The consideration that their place will be immediately supplied by another makes the women afraid to complain of excessive hours. The working of overtime, again, is largely due both to the absence of organisation and to the low rate of wages prevalent in most trades where only women are engaged; thus the workers are glad to earn all they can by working excessively long hours. In many industries, also, times of great pressure are often followed by periods of depression and scarcity of employment, so that overtime in busy seasons is a matter of necessity, in order to gain a living. This last cause is especially apparent in the case of home-work, called by one witness "slavery in summer "and starvation in winter." The president of the Luton Chamber of Commerce stated that straw-hat makers sometimes worked from 4 a.m. until midnight.(2) Many other instances of excessive hours worked by women in the employment of sweaters and middlemen might be cited. In the written Answers to the Schedules of Questions, the Tailoresses' Trade Union states that the hours for out-workers and sweaters are from 12 to 18 in the season.(3) In the evidence taken before the Select Committee on the Sweating System, many cases of very long hours worked by women in their own homes were brought forward; for example, a trouser-finisher in the East End said that she worked from 6 a.m. until 8 p.m. (4) [§ 721.]

Overtime. (i.) *Legal.*

722. Overtime until 10 p.m. for not more than 48 days in the year is permitted by law in some non-textile factories and workshops, on due notice being given. Dressmakers, milliners, and others engaged in the manufacture of articles of wearing apparel are the classes which chiefly avail themselves of this permission. The workers do not always appear to object to working overtime when it is really necessary. A striking illustration of this submission to the inevitable was afforded by one girl, who, speaking very warmly in favour of her employers, said that, "it was "quite true that they worked them overtime in the season, "but they were compelled to do so by the Factory Act."(5) But numerous complaints of illegal overtime were made. In textile factories no overtime is allowed by the Acts, but it is stated that in the cotton industry the system of "cribbing" time, *i.e.*, beginning a few minutes before and ending a few minutes after the fixed hours, is practised to such an extent that "when it comes to be put together it "comes to fully 2½ per cent. upon the total number of "hours."(6) The Yorkshire woollen weavers are said to sometimes work two hours' overtime.(7) It was stated before the Commission that in a rope factory in the East End, overtime was worked "a short time ago" until 10.30 p.m.(8) The worst complaints of overtime, however, refer to workshops, especially those where wearing apparel is manufactured. Overtime on the short day is said by one of the Lady Sub-Commissioners to be "almost the rule in "dressmakers' workshops."(9) H.M. Inspector for Devon and Cornwall estimated that nine-tenths of the complaints with regard to overtime came from dress, millinery, and mantle-making establishments. He added that before a naval ball in Plymouth every establishment in the town worked overtime. One girl, who was receiving 4*s.* 6*d.* a week as an apprentice, with 1*d.* an hour for overtime, was kept at work until 10.30 p.m., thus spending 12½ hours in actual work, after meal-times had been deducted.(10) Numerous other instances might be given of illegal overtime worked by women and girls in almost all industries. The moral, physical, and mental evils caused by this practice of overtime were dwelt upon by the witnesses, almost without exception, and cannot be exaggerated. This question is further dealt with below under other headings. A further grievance is that even when the hours allowed by the Acts are not exceeded, work is continued through the time nominally set apart for meals. It was stated that "it is quite common for a

(10) Group C., Digest, Vol. I., p. 39; Minutes, Bignold, 10,145–7.

[§ 722.] "woman to be working through the meal hours" at Dundee.(1) Complaints are made that the Glasgow cotton weavers working by the piece sometimes take advantage of the dinner hour to "pick" the cloth or clean their looms. The workers maintain that they are obliged to do this, as they are not allowed to stop the looms during working hours. It is also urged that, owing to the low rate of wages, they cannot afford to lose any of their working time in cleaning and "picking," but that extra time and pay should be allowed, or that "loom service" should be supplied by the employer, as at Dunfermline, and as is the case in America. In this respect, also, dressmakers and milliners appear to be the worst offenders, and the provision that, when overtime is worked, half an hour shall be allowed for supper time is constantly evaded.( ) It is stated, however, that in some cases this practice is preferred by the workers. In some large tin-works in Wales, where there are no proper arrangements for meals, the girls prefer to work "through the dinner-hour, so as to get "home early in the afternoon."(2)

(iii.) *Work taken home to finish.*

In the tailoring trade it appears that direct breaches of the Acts are not frequent, but, on the other hand, there is "abundant testimony "pointing to the almost universal evasion of the benefit of "the Act through the custom of women taking work "home to finish after shop hours." Out of twenty shops in Glasgow about which information was collected, this custom prevailed in all but three, and one witness believed "overtime in shops was now stopped, or nearly so, but the "girls took the work home instead," adding that she "never knew of a shop that did not give work home to "finish." It seems, however, that this practice is often allowed by the employers rather than insisted upon. Thus, although in some cases the women are "obliged" to take work home, in others they declare that they are "glad to "get it," owing to the low rate of wages, and the long slack seasons in this trade. An employer in Wales thought, too, that they were "jealous of out-workers getting it," and another employer, while admitting that work was taken home from his shop, said that he "strongly dis-"couraged" the practice. In the umbrella trade it is stated to be customary for girls to "take work home during the "busy season, and to sit up half the night over it."(3)

(iv.) *Overtime not paid for.*

An additional grievance with regard to overtime was mentioned by several witnesses, who complained that they were obliged to work overtime either without being paid for it at all or for a very low rate of payment. One witness, a dressmaker, stated that she "worked overtime three nights "a week in the season, and received no pay for it, during "the slack time she was obliged to take one or two days' "holiday a week without pay." Another said that she received no pay for overtime unless she asked for it, which she disliked doing, adding that "occasionally, after work-"ing overtime, the employées were told not to come next "morning, and the half morning's pay was deducted."(4)

Grievances in connection with holidays.

723. Holidays form a subject of complaint in many cases. The Factory Acts require that in addition to the Saturday half-holiday, Christmas Day, and Good Friday, eight half-holidays or four whole holidays shall be granted in the year. Infringements of the law with regard to the Saturday half-holiday have been shown to be not infrequent, especially in the clothing trades. Shop assistants, although not under the Acts, are generally allowed an evening off once in a week, except in small shops, where only one or two persons are employed, but they complain that the so-called half-holiday is often much curtailed by putting away goods, and tidying the shop after the nominal closing time.(5) The extra holidays allowed vary greatly in different industries and different localities. A week's holiday, with pay, appears to be usual for barmaids, waitresses, and shop assistants in the North of England and in Scotland. It is stated that London shop assistants have a fortnight, with pay, in most cases. Shop assistants in Ireland usually have the bank holidays and a fortnight in summer, in addition to several religious festivals. This was stated to be a reason for the low rate of wages prevalent in the South of Ireland. Pay is allowed after a specified term of service; in one shop a month's holiday is given, but a fortnight's salary is granted only after 10 years' service.(7) From four to seven days, with pay, are allowed by some establishments in the printing, tobacco, and clothing trades. The written evidence of the Dressmakers', Milliners', and Mantle-makers' Society mentions a firm which "stands out as an example to the "West End firms in general. It pays for all bank "holidays and summer holidays, not less than two weeks "to all assistants." But, generally speaking, no pay is allowed for holidays in most industries, except to the forewomen, and bitter complaints are made on this score. The Society of Women employed in the Upholstery Trade

(1) Group C., Digest, Vol. I., p. 33; Minutes, Reid, 11,223. (2) pp. 13, 89, 175. (3) p. 288. (4) pp. 237, 271, 277. (5) p. 13. (6) p. 4. *Cf.*, p. 311. (7) pp. 87, 205, 322.

[§ 723.] states in the written evidence that "a few shops give the "bank holidays, but only in nine cases out of ten; the "women lose their time although the shop is closed."(1) Various customs, however, prevail in different parts of the country. The manager of a large textile factory in Wales stated that when any of the staff died, all the hands had a holiday to attend the funeral, adding "and there are many "other treats from time to time for them to look forward "to." In other Welsh textile factories the girls are frequently allowed to take an afternoon off for "chapel "teas." A mineral water firm was not so liberal, and required the girls to work on bank holiday. They struck in consequence, and "the manager has never proposed "such a thing since."(2) It appears that, except in very small establishments, a holiday without payment can generally be obtained, but where only two or three girls are employed it is sometimes difficult for them to get a free time at regular intervals. One witness stated that in a small shop where she was employed, she had no holidays during three years, except the afternoons of bank holidays. On Sunday she had to clean the shop and dress the window for Monday.(3) On the other hand, it is stated, especially by dressmakers, milliners, and shop assistants, that they are sometimes obliged to take a holiday, with loss of salary, whether they wish it or not. One witness stated that, in a large establishment, mantle and dress makers would often be compelled to take from two to three months' holiday. Another girl, earning 7*s.* a week, said that she had 15 weeks' compulsory holiday during the previous year.(4)

Grievances connected with length of notice.

724. The period of notice on the termination of an engagement is generally a week or a fortnight, but varies greatly in different localities. It frequently depends upon the terms of engagement. When the salary is paid weekly or fortnightly a week's or a fortnight's notice is given.(5) In some cases three months' notice is given in the textile trade. Piece-workers in many industries do not give or receive any formal notice. One great grievance in connection with this point is that in some cases while the person employed is obliged to "give notice," the employer is at liberty to dismiss her summarily. It is urged that this custom places the workpeople in the power of foremen and overlookers, who are usually entrusted with their engagement and dismissal, and that "a week's notice would "give them opportunity for approaching the heads "of the firm on the subject, should they think they have "been unfairly treated." The reports of the Lady Sub-Commissioners show that shop assistants in England and Scotland are liable to be dismissed at a moment's notice, with no extra wages as compensation, "and the only "provision to secure that they shall not be absolutely "penniless when they leave, is the retention by the em-"ployer of the first week or fortnight's wages, which are "paid to them on dismissal." One case was mentioned in which even this was refused. Six girls were dismissed on Christmas Eve from one shop, without extra pay, and no reason for the dismissal was given. Another girl, who lived at a great distance from the place where she was engaged, was dismissed immediately after her return from a holiday.(6) Many other instances of summary dismissal might be given, where only the most trivial reasons were assigned. It is stated that firms frequently have private rules, with which they do not acquaint the workpeople on engaging them. An instance is mentioned of a mill-hand who gave a week's notice, but "on going to get her wages "she was told she had forfeited it, as a month's notice "was required by the private rules of the firm, a copy of "which was shown her for the first time, ... and "it was not until the case had been taken to court that "the wages claimed were paid."(7)

Irregularity of employment in certain trades.

725. Scarcity of work was one of the chief complaints brought forward in many districts, and in various trades. Sometimes, and this is largely the case in Wales, this appeared to be due to general depression in trade, and sometimes to seasonal causes.(8) Many of the industries in which women are engaged to any great extent are emphatically "seasonal" in character, and periods of great pressure alternate with long intervals of slackness, when little or no work can be obtained. These dull periods are due to several causes, varying with the industry and the locality. The seasons of the year and changes in fashion combine to bring about great irregularity of employment in the clothing and textile trades. These and most other industries are also much affected by foreign and home competition. In many cases the women complain that after working overtime during the busy season they are dismissed as soon as employment becomes slack. Others, even though they may not be dismissed, are often without work for several weeks at a time. Mention has

(1) Answers to Schedules of Questions, p. 353. (2) pp. 239, 240. (3) p. 85. (4) pp. 90–1. (5) p. 205. (6) pp. 87, 88, 304. (7) p. 304. (8) p. 242.

[§ 725.] already been made of compulsory holidays, which are due to the same cause. An employer in the tailoring trade, which is one of the most irregular, said that the girls could "only count on six months of good work during the "year." Another witness stated that workers in this trade frequently have only one-and-a-half day's employment a week during the slack season. In the slop factories and low class shops the work is said to be more continuous, generally speaking, than in those of a higher grade, as the former, not having any "customer" trade, are not so dependent upon changes in fashion, and often make articles for export, when there is little or no demand at home.(1) Dressmakers, milliners, and mantle-makers suffer from seasonal causes in the same way as tailors. It was stated by one witness that, in addition to three weeks compulsory holiday without pay in summer, they generally had five or six weeks' slack time, when many girls were glad to get work to do for their neighbours.(1) Laundresses, umbrella-makers, silk-trimmers, brush-makers, boot and shoe makers, pottery and pipe makers, and workers in some of the textile trades are also very liable to slack times at certain seasons. The tobacco trade offers a notable exception to many industries in which women are engaged, as it affords regular employment throughout the year.(2) At the time of the inquiry instituted by the Lady Sub-Commissioners, the Nottingham lace and hosiery trades were undergoing a period of depression, and only very few workers were in regular employment.(3) [§ 725.]

3. EMPLOYMENT OF MARRIED WOMEN.

Extent and causes.

726. It is impossible to get any accurate figures as to the actual extent of the employment of married women. The number varies widely in different districts, and in different industries. In all the districts and industries, however, in which women are extensively employed, there is a certain proportion of married workers. This is more especially the case in the textile industries of England, Scotland, and Ireland. Married women are also constantly found in the more unskilled and miscellaneous trades, while a very large number are engaged in home industries of all kinds, especially in the clothing trades. In Wales their employment is exceptional, and there appeared to be a strong feeling against it.(2) The reason which was almost universally given to account for the employment of married women was that they were obliged to find some work either to increase the husband's earnings or to keep up the home if he were ill or temporarily out of work. Thus, several male representatives of the textile industry in Yorkshire, though they deplored the practice, stated that the prevalent low rate of pay made it necessary in many cases that the wife should go into the mill, and supplement her husband's wages.(3) Similar evidence was given by a male cotton operative in Lancashire,(4) though in that district the dislike to the employment of married women, and to their competition with male labour, did not appear so marked. The wife of the cotton operative has, as a rule, less necessity to work than the wife of the woollen operative, and about half the number of married women working in the Lancashire mills are the wives of colliers and other workmen.(5) At Oldham it was stated "out-door workmen, "such as masons, navvies, bricklayers, labourers, and "such like persons," were not able to work more than 30 weeks in the year, and in these cases the wives had "to go to the mill to help earn a livelihood."(6) There is a very large class of casual female labour in such towns as Liverpool, Leith, and Dundee, where the women whose husbands are sailors, dock labourers, or irregularly employed, "pick up a livelihood by odd jobs" in rough or unskilled work, such as rag and cotton picking, sack-mending, paper-sorting, and rope-making, or in west Scotland in the preparing departments of the jute mills.(7) In London and other large towns also, a certain number of married women are engaged in various miscellaneous industries, of which the clothing trade is the chief. Thus, in Manchester, many married women are employed in shirt-making. In Bristol a number of the less well-to-do married women, belonging to the labouring class, work in clothing factories. As the factories there are uncomfortable, the better-class married women usually work at home.(8) A very large proportion of the laundresses appear to be married women of the class whose husbands are constantly out of work, especially in the winter. It is, however, urged by various witnesses that the employment of married women has, in some cases, an exceedingly bad effect upon their husbands, as it encourages them to rely on their wives' earnings and to be idle themselves. It was stated that the assistance of the wives and children on canal boats enabled the boatmen to spend their earnings in drink.(9) A laundry proprietor made a somewhat sweeping assertion to the effect that "in Acton the women "drank, but they worked, and the men drank "but did not work." His wife referred to a married laundress whose husband was always out of work until she died, when he appeared to find it quite easy to get employment.(4) Similar evidence was given in Scotland with regard to the tailoring trade. As an argument against the employment of married women a tailoress remarked that "in many instances "tailors marry women engaged in their trade, and "after marriage take advantage of the wives' labour "to live in idleness."(5) A male representative of the chain and nail trade, who was strongly opposed to the employment of married women, stated from his personal knowledge that they were driven to work by their husbands, who sometimes used physical force.(6) But the Lady Sub-Commissioner who subsequently spent three days in a personal investigation of this industry, found no evidence of any such pressure, as the married women she saw were working to make up a minimum for bare subsistence. The cry was rather that neither they nor the men had enough to do.(7) Quite a different explanation was given of the employment in factories and workshops in Birmingham of so many married women, whose husbands were well able to support them. The fact was noted as "one of the worst features of the industrial life," and the reason given was not, as in the case of the textile industries, that it was necessary for the wife to supplement her husband's earnings, but that home life was found dull and purposeless.(8) This prevalent opinion is largely accounted for by the character of the work to which the women have been accustomed from their youth. It consists chiefly in purely mechanical processes, such as are necessary in the chief Birmingham industries in which girls take part, which are absolutely useless to them afterwards in domestic life. After marriage they not only miss the steady work to which they have been accustomed, but also the cheerful society of their fellow-workers, and for both reasons many of them persist in going to the factory.(9)

Necessity for supplementing the family income.

Dislike of some women to domestic life.

727. There appeared to be a good deal of difference of opinion both as regards the general attitude towards the employment of married women and the character of their work. Certain employers saw no objection to the practice, and one added "it is stated "that married women are the steadiest and amongst "the best workers, and have a good influence over the "rest."(10) On the other hand, complaints were made, especially from the Staffordshire potteries, as to the coarse conversation they indulged in.(11) Their irregularity and unpunctuality also were complained of by various employers, *e.g.*, a wholesale clothier, a partner in a saddlery firm, a jute-mill manager, and a laundry proprietor. In one case the employer was replacing the women by boys,—"a boy does not stay away because it is washing day."(12) "Married women," said another employer, "always wanted to come late and "go away early in the middle of the day, and often "they would not come at all on Saturdays."(13) Various employers in the textile industry gave evidence before the Commission and to the Lady Sub-Commissioner, to the effect that they discouraged the employment of married women as far as possible, and the general opinion appeared to be that the practice was on the decrease. This was especially the case in Scotland. The chairman of the Scottish Co-operative Wholesale Society stated that the employment of married women was "discouraged" as far as possible

Character of the work of married women and attitude of employers, men, and unmarried women towards it.

[§ 727.] in the factory, and that no home work of any kind was given out. On the other hand, the secretary of the Kettering Co-operative Boot and Shoe Manufacturing Society stated that all the "female portion of the work," *e.g.*, the upper parts of boots, was done by women in their own homes, and that he preferred it being thus given out.(1) In some cases married women are allowed to work in the factory for six months or until the birth of the first child. This is the usual custom in Lancashire.(2) The objections of the men with regard to the employment of married women were mainly based on social and domestic grounds. But in certain cases where similar work was done by both sexes, as in the nut and bolt and chain and nail trades, and especially in some parts of the textile industries in Yorkshire, it was stated that the increased pressure of competition between male and female workers caused by the employment of married as well as single women had already become a "very sore question." "My opinion," said a male weaver from Huddersfield, "on the question of married women labour is that "she should be at home. In some cases the woman "who takes children out . . . in all kinds of weather ". . . is compelled to go to work, and the husband and "weaver cannot at the same time get employment."(3) A Bradford employer, however, thought this point was exaggerated.(4) It was noted that at Birmingham, where the women are not usually engaged on work which would otherwise be done by men, there seems remarkably little opposition to married women labour.(5) The tendency of the competition of married women to lower wages was a grievance which was also brought forward by the unmarried female workers, with whom the employment of the former, both in factories and in home work, was very unpopular.(6) The whole question in its economical aspect is dealt with under the head of wages.

Effect on Health and Home of employment of married women in factories and workshops. (*a.*) *Effect on young children.*

728. (*a.*) In Belfast and other districts, where a large number of married women are employed in factories, a good deal of evidence was taken on the question of the effect that was thus produced on the children. Although the young married women are unwilling to admit of any evil result from this cause, the older women stated their belief that their children had suffered in health from the careless nursing and injudicious treatment of those with whom they were "put out." This opinion is corroborated by the medical officers of the district, who state that the youth, ignorance, and inexperience of those to whose charge the infants are consigned has disastrous consequences. The children, they say, suffer from the use of sleeping draughts, accidents, and exposure to all kinds of weather. The doctor and the matron of the Royal Hospital at Belfast observed that a great many children are brought into the hospital shortly after meal hours suffering from burns or scalds. The accidents were apparently caused by the practice of leaving the children to prepare the food at an age when they were too young to be even left alone.(7) Some of the men complained bitterly of the injury suffered by young children by the absence of the mother at work. "It is a disgrace to humanity," said a Yorkshire weaver, "to see married women pulling their "children out of bed in the morning, wrapping them "in shawls, and taking them in all kinds of weather "to nurse, so that they can go into the mill. . . . I "think we should have better children, stronger, and "more healthy, and . . . not so many cripples if "they would stop at home and look after their own "children, instead of allowing these baby-farmers to "look after them."(8) A male weaver further stated that as his wife's weekly wage averaged 9*s.*, and she had to pay 5*s.* for "putting out" her child, this method, in his opinion, "does not pay. But if a woman makes "2*s.* out of it she considers she is in pocket by the "process, forgetful of all the disadvantages."(9) Similar complaints were made by representatives of the nut and chain and nail industries.(10) Very strong evidence on the effect upon infant mortality of the employment of young married women in factories was given by Dr. John Tatham, Medical Officer of Health for Manchester, who for many years has made a "careful study" of the "terrible question." "The highest rate of infant "mortality was found in factory towns such as Salford, "Blackburn, and Preston, where married women were "constantly employed." The average rate in 18 of the largest towns was 162 per 1,000 children, but in the case of the town of Preston the rate rose as high as 220. Dr. Ogle stated that in this last town insurance societies refused to take infant lives at all. He attributed this excessive rate of infant mortality partly to the fact that the employment of married women in factories often caused premature confinement.(1) The Lady Sub-Commissioner who visited Birmingham remarked that the rate of infant mortality then was very high. Were it possible, she added, to obtain particulars of the occupations of the mothers of the infants who have died under the age of five years, medical testimony points to the probability that an abnormal proportion of them would be found in workshops and factories.(2) The opinion of Dr. Tatham as to the cause of this state of things fully corroborated that of the Belfast doctors. "As the result of my "inquiry," he stated, "I was convinced that very "much of that excessive mortality was due to infant "neglect consequent on the withdrawal of maternal "care within a few weeks of the birth of the children." [§ 728(*a.*)]

Question of extension of legal period of suspension from work after childbirth.

It was urged by various medical men that the present period of suspension from work after childbirth should be considerably extended. In the opinion of two doctors from Belfast, if the legal period of one month were extended to three, this would be sufficient.(3) Dr. Tatham, however, considered that the interests of the child demanded a period of at least six months, in which it should be nurtured and cared for by its mother.(4) It was remarked that any extension of the period of suspension from work would be probably objected to by the mothers, to whom the wages earned at the factories are of paramount importance.(2) So loth were they to leave their work and lose their wages, it was stated, that they would sometimes continue their work at the factory right up to the time of childbirth,(5) and return long before the specified time was up, if they could evade detection. Dr. Tatham had no doubt that under the present system the health of the mothers, as well as of the infants, was injured. A miserable picture of domestic discomfort—doubtless typical of many others—was given by a laundress, which incidentally illustrates some of the worst effects upon the health and home of the employment of married women. The witness had been a tailoress before marriage, and had earned from 19*s.* to 23*s.* a week. She afterwards married a shoemaker, whose health and sight gradually failed. She was then obliged to take to laundry work to support the family. Her husband looked after the children, and her eldest child nursed the baby. Up to within a few days of her last confinement she had been at work, and both she and the baby had been ill ever since. The children were left in charge of someone, and were often brought up to the laundry at dinner-time to be suckled, though the mothers were tired out with their morning's work. The laundresses often cut the dinner for the children in the morning before they went to work, and the children eat it in the streets.(6)

(*b.*) *Effect on the health of married women of especially heavy or dangerous employments.*

(*b.*) The question of the effect upon the health of heavy or dangerous work such as that carried on by married women in the nail and chain making district, or in the chemical and white lead industries, is treated under the heading Health, and it is only necessary here to summarise the main conclusions arrived at with regard to married women. It is, however, obvious that whatever objections are raised with regard to the employment of women in general in unhealthy industries apply with redoubled force if the women are married. This point was emphasised by a representative of the chain and nail trade who gave evidence before the Commission.(7) The evil effects complained of were attributed to the heavy and unsuitable character of the work. He states that he knew cases when women who were expecting their confinement had died in consequence of continuing this laborious work. The Lady Sub-Commissioner, however, in her report on the industry, stated that she only met with one instance of injury received from the use of the "oliver." Married women told her that they took reasonable rest after their confinements, but, she added, persons with local knowledge assured her that the women often return to the shop a very few days after the birth of a child. The health of the mothers she found to be fairly good, and much better

In the Nail and Chain industry.

[§ 728 (b.)] than in districts where the women have no work and little food. The high rate of infant mortality seemed to be the result rather of the carelessness with which they are brought up than of the health of the mother. The evidence of the medical men of the district on the subject differed considerably.(1)

In White-lead works. The employment of married women in white lead works has especial dangers owing to the character of the material used. Dr. Oliver, physician to the Royal Infirmary at Newcastle-on-Tyne, who investigated the condition of this industry, expressed a strong opinion that not only that women were peculiarly susceptible to lead poisoning, but that the most evil effects were produced on the offspring of female lead workers. It was stated that the poison in the mother's system is inherited by the children, many of whom die at their birth. In other cases the children develop paralysis at an early age and are affected for life. In consequence of these facts, the Manager of the Mersey White Lead Manufacturing Company had ceased to employ women in the dangerous part of the work.(2) At Glasgow however, the medical officer for the lead works denied that the same state of things described at Newcastle existed in his district. He makes no particular reference to the case of married women.(3) It appears that about 30·2 per cent. of the women employed in 13 of the factories in the Staffordshire potteries are married. A "woman attendant" is often employed in various processes by the men, and wives act in this capacity to their husbands. The work there includes

In Potteries. such processes as "towing," "glazing," and "painting," all of which are unhealthy, on account of the lead used. But no special mention was made as to the effect on the health of the married women in the Lady Sub-Commissioners' reports.(4) A male representative of the Pottery industry who gave evidence before the Commission stated, however, that owing to the dust resulting from the "towing" process, married women's lives had been shortened, and their children had "died through it after they were born." He quoted the opinion of Dr. Arlidge, physician to the infirmary in the district, that the child of a woman who followed one of these dusty employments could not live, because its breathing organs were affected by it.(5)

(c.) Effect on the home life. (c.) The wretched condition of the homes of those who left them to go to work was borne witness to by many. Various male representatives of the textile industries expressed great dislike on domestic grounds to the employment of married women in factories. But perhaps the strongest indirect evidence as to the disastrous effects on home life thus produced, is the rule—afterwards modified—of a certain firm, to the effect that any women who married must at once leave the mill. One of the founders of the firm, who had worked his way up from the rank of a workman, had introduced it because he believed that "a great "deal of the unhappiness and drunkenness in working "families arose from the wives being in the mills, and "the consequent dirtiness and untidiness of their "homes.(6) At Birmingham, where so many married women are employed in factories, it was remarked by a doctor that "a comfortable home was the exception."(7) The secretary of a girls' club in Wales considered that factory girls made wretched house-keepers, as they spoiled the food by bad cooking and did not know how to keep the place tidy.(8) The same objection to the employment of married women was brought forward by some representatives of the nut and bolt and nail and chain industry. "I believe that all married "women ought to be in their own homes minding their "own domestic affairs," said one of them. "The women "should be at home economising her time and making "the best of her home, instead of neglecting it and "having to pay girls to look after it while she is getting "a few shillings in the shop," said another. The result of the work of married women, said a third, is that "everything is being neglected at home, and "when a man goes in to his little place, his little castle "as it should be, there is nothing clean or tidy. It "drives him to the public-house and all that kind "of thing."(9) The state to which domestic life in the nail and chain making district is reduced is best seen by the description of the Lady Sub-Commissioner. "With very few exceptions, the homes I saw belonging "to women who work either in factories or workshops "are very nearly desolate. The meals consist of bread "and butter and tea with a little cold bacon for dinner. [§ 728 (c.)] "The tea is made from a kettle heated at the forge, "and thus the cares of housekeeping are reduced to a "minimum . . . there is no knowledge of cooking, "and therefore no variety of diet. The children troop "into the workshop when they come home from school, "and there is no home life at all. The condition of the "children of these working mothers is deplorable. "Either they are 'minded' by little girls at 2*s.* a week "or else they are perched on a warm heap of fuel or "dangled in an egg-box from the shop-ceiling. When "they are old enough to walk they play in the gutter "and thrust their arms into the holes which ventilate "the drains . . . there does not appear to be "crèches, playrooms, or any of the philanthropic insti-"tutions which in other places supply to some extent "the blessings of a comfortable home."(1)

Effect on Health and Home of employment of married women in Home Industries. 729. The effect produced upon the health and homes of the married women who are engaged in home industries is a far-reaching and difficult question. The term home industry is used in connection with two different classes of persons, those who work in domestic workshops in towns such as Luton and Bristol, and those who take in work at home in most large towns. A great deal of home work is done by women in the clothing, brushmaking, and in certain parts of the cabinet-making trades.(2) No summary on the subject could be adequate unless the whole ground occupied by the recent inquiry of the Committee of the Lords on the Sweating System were to be retraversed, as well as the reports of the Lady Sub-Commissioners. An enormous number of visits were made by the Lady Sub-Commissioners to home workers in various industries, amongst whom were a great quantity of married women. Results of the most diverse kind were recorded, which it is very hard to classify. The detailed tables of these visits which are appended to the reports show that in certain instances a quite satisfactory state of things was found, but that more often the conditions of labour in domestic industries were seen at their worst. In reference to this point the opinion of the Honorary Secretary of the Master Tailors' Association may be quoted, "I think it very necessary that these homes "should be inspected, and if it can be done by the "local sanitary officers, all the better. I certainly "think some satisfaction should be given to the public "that home work is carried on under proper healthy "conditions." . . . He further suggested that a certificate from a doctor to this effect would meet the needs of the case.(3) The most pressing grievance which, however, is dealt with under the head of Wages, was the very low rate of remuneration that is constantly obtained in these industries, especially by the isolated home worker, who is usually "sweated." When the rate of wages was very low the standard of comfort corresponded with it, the homes were miserable and the physique of the women bad. Hence it was noted that apart from the economic question, one great objection to home work was that late and irregular hours and insanitary conditions were usually its accompaniment. A tendency, which was attributed to the employment of married women, to withdraw work from the factories to the homes, where it was likely to be carried on under unhealthy conditions, was observed in the tailoring trade in Scotland.(4) Therefore, from the point of view of the health of the married women, work in a factory or in a workshop which is under inspection, and in which the number of hours is limited, is probably better in most cases than work at home. But on the domestic side the case is different. If a married woman is for any reason obliged to work, an employment which does not necessitate her leaving home, and therefore "putting out" the children, has obvious advantages over one that takes her away all day.(5) It is at any rate the lesser of two evils. But as Miss Collet pointed out in her paper on West End tailoring, in "Labour and Life of the People," "the conditions of labour vary with each individual family." Hence the difficulty of safe generalisation.

Home industries Luton and Bristol. Home industries, such as the straw-plaiting and hat-making carried on at Luton and Bristol, are of a different character, and a good deal of information was collected about them. The conditions of home work in that district, it was remarked, were not unfavourable, and in no case in Bristol was anyone found working in a bedroom. While the factories may be equally uncomfortable in London and Bristol, in London it was observed the home is frequently worse than the

(1) Group A., Minutes, Vol. II., Appendix, p. 574, Miss Orme. (2) p. 152-5. (3) p. 285. (4) pp. 62-3. (5) Group C., Minutes, Vol. III., Owen, 30,500. (6) p. 102. (7) p. 54. (8) p. 23. (9) Group A., Minutes, Vol. II., Juggins, 17,714; Price, 17,862; Homer, 17, 114-7.

(1) Group A., Minutes, Vol. II., Appendix, p. 574. Miss Orme. (2) Group C., Answers to Schedules of Questions, p. xv. (3) Group C., Minutes, Vol. II., Gordon, 15,409-13. (4) p. 269. (5) Group C., Minutes, Vol. II., Tabberer, 13,867.

[§ 729.] factory, while in Bristol it is better on the whole.(1) This opinion is supported by the accounts of visits paid to the homes of the workers and to the domestic workshops at Luton, which, in the opinion of the Lady Sub-Commissioner, were neither so wretched or so neglected as the statements of the manufacturers would have led her to suppose. "All such statements are necessarily "relative and dependent on some undefined standard "of the speaker. To anyone accustomed to a district "in which the majority of working-class families are "content to live in two rooms, the four or five roomed "houses in Luton seem spacious, even though hats "may be drying in front of the kitchen fire and lying "about on the sitting-room tables and chairs. The "house-keeping and the care of the younger children "in several cases seemed undertaken by a girl of 13 or "14, but the supervision, exercised by the mistress, "free to leave her machining or finishing at any "moment, is, of course, much greater than would be "possible in the case of a married woman working in a "factory. In one case, probably typical of many, the "wife told me that she paid to have the washing done "away from home, as she was at her machine all day; "it may be reasonably doubted whether the household "is any the worse off for this; nor, disagreeable as it "may be to have hats drying in one's kitchen or being "blocked in an out-house or scullery, did I see any- [§ 729.]
"thing which for discomfort and unhealthiness could "equal the condition which obtain in every small house "on washing days."(1) Of the alleged late hours of work for children and young persons, no proof was found. It must, however, be remembered that domestic workshops such as here described differ fundamentally from the numerous small workshops such as are found in the tailoring or umbrella trade or nail and chain industries. In the first case the married women work in their own homes with the help of two or three others, members of their own family. In the second case they work perhaps in the home of a Jewish sweater or in the chain and nail trade in a so-called "domestic workshop," which is necessarily apart from the dwelling-house. In these last two instances, while the sanitary conditions under which the married women work are no better and probably a great deal worse than the domestic workshops at Luton, the other evil of the enforced absence from home, with its unfortunate results in domestic life, is as great as in the case of factory workers. But in treating the question of home work generally, it must be borne in mind that it would be difficult to exaggerate the insanitary, dirty, depressing and miserable conditions under which it is constantly carried on—conditions of which the detailed reports of the Lady Sub-Commissioners and the evidence given before the Lords' Committee on Sweating give abundant proof.(2)

---

4. SANITATION AND HEALTH.

I. SANITATION.

A. SANITARY ACCOMMODATION.

Defects in sanitary accommodation.

730. The sanitary accommodation provided in many cases for the use of women workers was found by the Lady Sub-Commissioners to be "disgraceful." This was especially the case in certain industries and certain localities. The worst complaints came from the textile industries and from shop assistants. In England, Scotland, and Ireland the sanitary accommodation provided for female textile operatives is, with certain exceptions, distinctly bad, and that provided for shop assistants is in many cases miserably insufficient. In Wales, however, the provision in this respect was "throughout decent."(2) The complaints on this subject may be divided into two classes—those in which the accommodation provided was objected to on grounds of decency, and those in which the existing arrangements were regarded as insanitary. Thus numerous complaints have been received with respect to sanitary accommodation, that (*a*) it is common to both sexes, and has an undesirable publicity; (*b*) it is non-existent, insufficient, ill-situated, ill-ventilated, constructed on a bad system, and uncleanly. All the grievances come under one or other of these various heads, though in treating of them it has not been found possible to take them in this exact order, or to keep them absolutely apart, because in some cases they overlap. Some idea of the generally defective state of the sanitary accommodation in workshops of different kinds can be obtained from the analysis made by one of the Lady Sub-Commissioners of a report on the state of 193 workshops, in which women and girls were employed in a certain district of Birmingham. It was found that "82 were in a satisfactory condition, 49 only "needed lime-washing, 37 were without separate privy "accommodation for the sexes, and 25 needed con- "siderable improvement."(3) The complaint of the total absence of sanitary accommodation comes chiefly from shops or establishments of any sort, in which only one or two women are employed, and from a few miscellaneous factories. Scotland appears to be especially deficient in this respect. "A grievance," says one of the Lady Sub-Commissioners, "which extends "over the majority of the small shops, and even in "those where servant girls are employed, is the "absence of sanitary accommodation. I have been "urgently requested by numerous employées, and by "several medical men, to direct attention to this defect "and its grave results on the health of the workers. "In many cases girls are confined in the shop from "the opening to the closing hour, and have not per- "mission to leave on any pretext. As will be seen "from the evidence of witnesses and the tables of hours, "this may include a very long stretch of time, and "frequent cases of illness have been reported as arising "from close confinement, long hours, and insanitary "condition. In an arcade, 48 shops were found all "employing one, and in most cases several, girls, "where there was no sanitary accommodation attached "to the shops, the only provision being a lavatory for "the use of all the tenants, and common to both sexes, "and which the employees could not use."(3) Evidence was given by various witnesses with regard to this "serious evil," amongst others by a saleswoman and manager in a confectioner's shop at Glasgow. There was no lavatory accommodation in the shop in which the witness was engaged, and she said she knew of many others which were equally defective. A temperance restaurant was found in the same condition. A case is reported of a shop girl having died from illness brought on by these conditions.(4) A similar complaint made with reference to a London shop was ascertained by the medical officer of health to be correct. "Evidence "was also given of the hardships to which girls acting "as cashiers where only men were employed were "subjected through the thoughtlessness and in- "humanity of their employers."(5) The same grievance was reported at a pottery and pipe and at a brush factory in Glasgow, and in "first-class" tailors' shops where only one or two women were employed. Serious illness was said to be the result in some cases.(6) It was stated by Mrs. Hicks that in one of the departments in a large firm at Stratford the workshop is in the midst of the stable, and there are no lavatory arrangements at all. She further stated that "at a "well-known mineral water maker's they have one "lavatory, but the women are not able to leave their "work during work hours on pain of dismissal. At "another place, where there are over 100 women "employed, there are two small lavatories. These are "kept locked, and the women have to go to the office "and apply for the key, so that they may not waste "their time without its being known."(7) In the nail and chain industry, in the Black Country, complaints were made that in many factories sanitary accommodation was totally wanting, and, where it was provided, great cruelty was shown in refusing to allow the women to leave their work for hours together.(8) The home workers at Bristol—some of whom come from long distances—stated that they were kept waiting for hours standing in the passages or waiting rooms at the warehouses, when they fetch or bring back work. Great inconvenience, they complained, was caused by the absence of any sanitary accommodation.(9) Other cases of insufficient accommodation were mentioned. At a linen mill in North Scotland only two lavatories were provided for 300 women, both of which were in a shocking condition, and at a pottery factory in Glasgow only one was provided for 100 girls, which was very unsuitably placed.(10) At a tailor's workshop in Ireland one dirty dark lavatory was found

Insufficient.

Common to both sexes.

[§ 730.] for both men and women in the basement, and at a shirt and collar factory "the men and women's lavatories were placed together in a dark cellar."(1) No separate accommodation was provided at a hosiery and at a lace factory in Nottingham, and at three brush factories at Glasgow and at a restaurant.(2) This objection was brought forward by the men before the Commission. A Yorkshire weaver said, "The sanitary "arrangements in many of our mills are not so com- "plete as they ought to be. For instance, men and "women have to use the same sanitary accommodation "as boys and girls. Now this, I consider, to be "extremely injudicious, and often tends to immo- "rality."(3) Another complaint that was made was that the lavatories were often unsuitably situated. "I find that in the majority of the factories that I visited," writes the Lady Sub-Commissioner who visited Scotland, "the sanitary accommodation is "within the workrooms and has an undesirable pub- "licity, and with this arrangement it is difficult to "prevent discomfort, even when the ventilation and "appointments are excellent."(4) Thus at one of the Glasgow potteries the lavatory is placed at the gate by which all the workers enter, and the women greatly object to the publicity of the situation. In a brickyard in Wales it was placed in an "unsightly position," in a lace factory at Nottingham "by the hoist and over- looker's desk."(5) The grievance that the lavatories are often placed in the workrooms, which is often the case in the textile industries, though not confined to them, comes chiefly under the head of ventilation. Thus "serious defects in the sanitary accommodation in the "workshops attached to the fashionable shops in "Liverpool" were noted. In many cases the lavatories ventilated into the workshops.(6) Mention was made of "frequent instances of lavatories being provided "with no outlet for ventilation or with outlets that "were quite inadequate. A highly objectionable "arrangement is to allow them to ventilate freely into "the weaving flats where the workers are employed. "This occurs where the lavatories are within the room "and are not roofed in."(4) In a calico-weaving factory at Kilmarnock and a net factory at Lanark, while the other arrangements were satisfactory, no provision was made for ventilating the lavatories.(7) In a factory at Dunfermline the workers complained that the lavatories, which are not sufficient in number, nor satisfactorily ventilated, open into the dining-room and thus allow effluvia to come in. In other cases the lavatories open into the weaving sheds and the effluvia was most offensive.(8) In a textile mill at Port Glasgow frequent cases of illness are said to result from the women working in the vicinity of the lavatories.(9) "In the north of Ireland the lavatories are, in many "cases, in a neglected condition, emitting much "effluvia, and being sometimes too near the looms. . . . "Speaking generally, in the south of Ireland they are "good in large new mills, but deficient and dirty in "the majority of cases where any old buildings have "been utilised and capital is wanted for structural "improvements."(10) A disgraceful state of things was described by the officers of the Bradford and District Machine Wool Combers' Association. They stated that in a certain mill the lavatories for the men and women, though separate, were all in the same shed, where the heat was from 90 to 100 degrees, and actually close to the workers. The effluvia can be smelt "within "twenty-five yards . . . there is no outlet, and it is "allowed sometimes to stay for 24 hours." The same complaint was made by women working in a wool- combing factory in Bradford.(11) In the Yorkshire mills generally it was stated that "the accommodation "provided is seldom sufficient for the number of "women employed; the closets are in a dirty and "offensive condition, owing to an imperfect system of "drainage, and frequently the only ventilation is from "the workrooms."(12) All these evils were complained of in Lancashire, where the sanitary accommodation was found to be "more universally bad than in mills of a similar class in Yorkshire." This was attributed to the greater heat used in the manufacture of cotton, which tends to increase the effluvia. In one mill a piece of the lavatory door had been removed in order to enable it to close over a spinning frame.(13) The tables of reference give ample evidence of the neglected, filthy, and insanitary condition of the greater number of the lavatories in textile factories.(14) The defects in cleanliness and ventilation, though in some cases clearly due to simple neglect, are often closely bound up with the question of the system on which the sanitary accommodation is worked. The "tub system" appeared the one in most general use in Yorkshire, both inside and outside the mills. "When situated in "the mill yard, and having free ventilation, it is often "unobjectionable, but in those mills where the "accommodation is inside the women raise great "objections to it, and complain that owing to neglect "the closets are sometimes unfit to use, and that the "effluvia from the rooms is actually injurious to "health." "In Yorkshire the common practice is to "take away the tubs from the outside, but in Lanca- "shire they are carried through the rooms. This is "done during working hours about twice a week, and "on each occasion the air of the room is vitiated." "Another system which I have found objectionable is "the 'bog system.' Pipes connected with the lava- "tories pass through every story of the mill, and "at the bottom end in a cesspool, described as a "'bog.' This cesspool remains untouched, always "for a considerable time, and sometimes for as long "as 12 months. The effluvia is generally extremely "bad, and, as a rule, worst in the lowest room. No "water is used, and the pipes become stopped, which "causes the lavatories to get into a filthy condition." This system seemed common in Lancashire. "There "is a third system, in which no water is laid on, but "provision is made for flushing with water, which in "some places is done once a day. If, however, the "flushing is not carefully carried out, but neglected "for several days, the women complain that the places "become unfit for use."(1) Again, it was stated that "much discomfort was caused by the absence of or "defects in the flushing apparatus. Frequently, "when flushing appliances are provided, they are not "under the control of the workers, but of officials, "who may put them into use at stated intervals, or "may neglect to do so. In some factories the supply "of water for this purpose is entirely dependent on "the needs of the engine or the will of the foreman. "Again, an automatic arrangement is sometimes met "with where mechanical flushing is applied once every "hour. But instances are too frequent of no water "supply whatever being provided, while cleaning "operations are often performed at unsuitable times "(such as during work hours), and at unduly long "intervals."(2) Where the sanitary accommodation is provided outside the mills, as is the case in the cloth industry in the West of England, these evils are greatly mitigated. Thus it was noted that in those districts, though the sanitary accommodation was usually bad, it was less injurious on the whole than either Yorkshire or Lancashire, as the effluvia seldom reached the women while at work.(3) In the woollen industry in the South of Scotland, "an entire absence of anything objection- able" in this respect was observed. The lavatories were all outside, and were constructed of iron.(4) "In "a number of mills in Lancashire the lavatories have "been closed inside, and fresh ones built outside. The "managers in these mills state that unless water is "used, it is impossible, even with the greatest care, to "keep the lavatories free from effluvia, which is "certainly injurious to the workers' health.(5) Both "in Yorkshire and in Lancashire in a certain number "of cases the water-closet system with the regular "supply of water was in use, and when this was so, "the accommodation was otherwise good and clean, "and none of the abuses consequent on the other "systems appear."(6) It seems, therefore, that this system is the one to be desired, where it is practicable.

Unsuitably situated.

Ill-ventilated.

Constructed on a bad system and uncleanly.

Three recommendations on sanitary accommodation of one of the Lady Sub-Commissioners may be here quoted: (1.) "That every lavatory be provided with "flushing appliances or a continuous supply of water; "that these be under the direct control of the worker, "or when automatic flushing is preferred, it be applied "not less frequently than every 30 minutes." (2.) "That all lavatories be supplied with sufficient means "for ventilation, and that in no case should a lavatory "be allowed to ventilate into the rooms where the "workers are." (3.) "That where structural arrange- "ments permit, lavatories should be apart from the "working room, and when this is not possible, the "entrances to the former should be screened off."(7)

Recommendations.

731. (*a.*) The scandalous state of things detailed may be briefly ascribed to two causes—the inadequacy of the present system of inspection and the ignorance and indifference of the employers. Although the

[§ 731 (a.)] *(a.) Inadequacy of present system of inspection.*

former may be partly due to defects in the Factory and Workshops Acts themselves, it can hardly be contended in the face of the forgoing facts, that the first clause of section 3, part I., in the Factory Act which decrees, "that a factory shall be kept in a cleanly state and free "from effluvia arising from any drain, privy, or other "nuisance," nor the similar clause relating to workshops in the amended Act of 1891, has been effectively carried out. This is presumably due to the insufficiency of the present staff of inspectors. One of the Lady Sub-Commissioners states, "With regard to the prevalence "of sanitary defects and their continuance, I find the "reason usually ascribed for this by the workers, is "the insufficient number of inspectors appointed to "carry out the provisions of the Act."(1) She adds in another report, "I found that the western district of "Scotland affords a striking instance of the large area "and great number of factories and workshops lying "within the boundaries, which are under the inspection "of two or three officials. My attention has frequently "been called to this point as an explanation of "the necessarily inadequate execution of the "duties imposed."(2) The same reason was given to account for the insanitary conditions prevailing in the textile industries of England.(3) The deficient sanitary accommodation provided in shops, &c., is partially explained by the fact that they are not yet under sanitary inspection of any kind. Another contributing cause to the continuance of sanitary abuses is the dislike of women to bring them to the notice of the inspector. "It is a general complaint "amongst the women," said the secretary to the women's Confectioners' Trade Union, "that they do "not see the inspectors . . . . One girl who has "worked in a factory for 13 years says she has never "seen an inspector inside the factory . . . They "think it is most necessary that there should be women "inspectors. The girls cannot talk to men as they "would to women."(4) Again, it is said that in Scotch factories, where the labour is chiefly supplied by women, great discomfort is caused by the continuance of insanitary conditions, which is "often due to the difficulty "women workers have in approaching the factory "inspector or male overseers on these matters." "I "am frequently met by urgent requests from workers "that I should bring grievances in connection with "sanitation before employers and managers. In many "cases the women tell me that they have long suffered "serious discomfort, but have found it impossible to "appeal to those in authority to have the grievance "removed."(2) Some women working in a brush factory heard their employer inform the factory inspector that sufficient sanitary accommodation was provided for his women workers, and they had not liked to draw the attention of the inspector to the fact of its objectionable situation and that it was common to both sexes.(5) Whether it was the usual practice of the inspector to accept statements of that sort from the employers without making personal investigation did not appear. It is further stated that the evasion of the law with regard to sanitary matters is largely due to the "divided responsibility which now exists between "the factory inspector and the sanitary authorities "under the Act of 1891. The matter is looked upon "as nobody's business and is consequently neglected."(6) This is especially the case with reference to the sanitation of workshops. In towns like Liverpool, Birmingham, and Nottingham prompt action has been taken by the local sanitary authorities, in other places little or nothing has been done.(7) This and other questions relating to the subject of inspection and the Factory Acts are dealt with later in greater detail. The question of the system on which the sanitary arrangements are based has already been discussed. One great difficulty in the way of the introduction of modern and improved systems is the necessary structural alteration that would be involved. When the buildings are old or where large private houses and other buildings have been adapted to the purposes of workshops, as is the case at Bristol, South Ireland, country districts in Scotland, &c., this is especially noticeable.(8) In many cases the employers refused to make the necessary alterations on grounds of expense, and the difficulty of getting a water supply for cleaning purposes is frequently brought forward. Factory inspectors, however, are powerless to enforce structural alterations. The point then arises, whether since decent and healthy sanitary conditions are lacking, it should be permissible to use such places for the employment of women and young persons.

(1) p. 307. (2) p. 177. (3) p. 102. (4) Group C., Minutes, Vol. I., Miss James, 8477, 8508. (5) p. 276. (6) pp. 116, 161. (7) pp. 50, 72, 161, 307. (8) pp. 24, 324, 176.

[§ 731 (a.)] "I venture to think it desirable," says one of the Lady Sub-Commissioners, "that a higher standard in "ventilation and sanitation be required in mills and "factories, with power on the part of factory inspectors "to enforce it within a reasonable time."(1)

(b.) Ignorance and indifference of employers as to sanitary conditions.

(b.) The good which thorough inspection can do in these matters, even if unaccompanied by any penal powers, can be seen by the salutary effects produced in certain instances by the visits of the Lady Sub-Commissioners. In some cases the continuance of the evils complained of was explained, though hardly justified, by the ignorance of the employers as to the conditions under which their operatives worked. In other cases, in consequence of the pressure brought to bear upon the managers or employers, greatly needed reforms were promised, "apparently in anticipation of a visit by an Assistant "Commissioner being repeated." Thus complaints were made with regard to a very objectionable practice in use in mills in North Scotland, of supplying water for drinking purposes by means of a pitcher to which is attached a tube that is used as a general mouthpiece. The women operatives objected to this strongly, not only on account of the uncleanliness, but because, as they assert, disease has often been transmitted by this means. "In several cases the employers have ex- "pressed their readiness to make arrangements for "supplying water by taps or fountains in the work- "rooms, and stated they would have done so before had "the matter been brought to their notice."(2) One of the Lady Sub Commissioners stated that she had always met with great readiness on the part of employers and managers to consider suggestions on sanitary points, and various instances are mentioned in which sanitary reforms in Scotland "have been or will be shortly carried out."(1) In one case a mill at Port Glasgow was visited in which the sanitary arrangements were in a "scandalous condition." The attention of the manager was called to the matter, and a promise was received from him that he would lay the matter before the firm. It has been since ascertained "that the owners of that "mill have given instructions to one of the leading sani- "tary engineers to have plans prepared for a complete "system of drainage, and have asked him to put in the "best appliances at whatever cost, so as to ensure that "their employées may work under the most favour- "able sanitary conditions."(3) Another manufacturer complained of the disadvantage under which country firms laboured in their remoteness from large industrial centres where modern sanitary appliances could be seen. He added that the jealousy of manufacturers prevented their comparing notes on these matters. He further suggested that "if the Labour Commission could "see its way to collecting information on various systems "of ventilation, drainage, &c., and would distribute this "in a printed form among country firms, it would be "very helpful to the latter."(1) But the excuse of ignorance, insufficient as it is, cannot always be pleaded. In many cases it was stated that complaints had constantly been made, but that nothing had been done. The foreman in a pottery factory at Glasgow, where no sanitary accommodation was provided for the women, stated that he had frequently brought the matter before the firm, but that all his efforts to have the grievance remedied had been in vain. In a brush-making factory in the same town, the Lady Sub-Commissioner inquired if sanitary accommodation were provided for the seven women workers, and was told by the employer that he "did not think it was necessary."(4) For such cases the extreme rigour of the law appears to be the only resource. The excuses given by certain employers for defective sanitary arrangements were often of the most flimsy character. The owner of a Lancashire mill remarked that the local sanitary inspector had drawn his attention to a sanitary defect, but he did not intend to remedy it, as he believed that the inspector "was in the pay of the plumbers."(5) In other cases in Yorkshire the firms endeavoured to shift the responsibility on to the landlord from whom they rent the building,(6) in spite of the fact that by the Factory Act the occupier is responsible for employing women and children in an unhealthy building. "Numerous employers" alleged that their only objection to improving their sanitary accommodation was the certainty of its being damaged by the operatives. A similar excuse was made by some of the Scotch employers with regard to the absence of taps or fountains for drinking purposes. On the other hand, an "important statement" was made by the manager of a Preston mill where the sanitary accommodation was on the water system and extremely good, to the effect that in his experience of

(1) p. 177. (2) p. 306. (3) p. 193. (4) pp. 283, 276. (5) p. 117. (6) p. 101.

[§ 731 (b.)] four years no trouble had been given in consequence of the carelessness of the operatives. It was also noted that in those mills where water taps were in use, no traces of carelessness on the part of the workers were discovered, nor were any such complaints brought forward by the mill officials.(1) A vivid picture is given by one of the Lady Sub-Commissioners of the difficulties experienced by the local sanitary authorities in Liverpool in their endeavour to force the employers and managers in workshops to comply with the provisions of the Factory and Workshop Act of 1891.(2)

B. VENTILATION.

Extent and causes of present defects.

732. Complaints on the subject of defective ventilation, arising as it does from various causes, are very common in all centres of the textile industries where the conditions of work make the question a peculiarly difficult one. They are also brought forward by laundresses, shop assistants, and dressmakers, by those who work in small workshops which are apt to escape inspection, and by those who work in factories in which dust, &c., is generated from the materials in the process of manufacture. The general question only of defective ventilation will be here treated. The special cases of injury to health arising from particularly unhealthy processes, partially owing to the absence or defective state of the appliances necessary to mitigate the evils complained of, will be treated separately. From the reports of the Lady Sub-Commissioners it appears that ventilation is imperfectly understood as a science, and still more imperfectly carried out as an art. In many cases this appears to be due to want of the knowledge of sanitary principles on the part of the foremen, managers, or employers; in many others to the prejudices of the workers. Again, difficulties of structure with regard to the buildings and the want of modern ventilating appliances accounted for many deficiences. The only other cause to which the continuance of these defects in sanitation can be ascribed, appears to be, in some instances, the absence of legal power to remedy them, and in others, the inadequacy of the present system of inspection.

In England, Scotland, and Ireland, with certain exceptions, the ventilation in textile factories is bad.

(a.) Cotton industry in Lancashire.

(*a.*) In Lancashire it is stated that "the ventilation "in the majority of mills is inadequate, and the venti- "lators are frequently sealed. In the Nelson district "many of the mills are without ventilation in any "form, and one manager admitted that it is a common "occurrence for weavers to faint in hot weather. "Several cases of fainting were reported to me by the "operatives, especially from those mills where, in "addition to bad ventilation, heavy steaming prevails. "The use of fans in card-rooms was exceptional, even "in the mills which were pointed out as the best. I "seldom found good window ventilation, and even if "the windows could open, little use was made of the "opportunity. I was always told by the manager that "the control of the windows is left to the operatives, "but from the operatives I received a wholly different "statement. Another point is, that the windows are "mostly constructed so that when open a draught "falls upon the frames, and blowing down the 'ends' "injures the work. In these rooms the atmosphere is "almost always hot and close."(3) In Yorkshire the abuses of ventilation appear to come rather under the further head of "special cases." One mill, however, is mentioned where the effect of the already offensive atmosphere was heightened by the crowding of machinery, the looms were so close together that it was difficult to pass through the shed.(4)

(b.) Silk industry.

(*b.*) Very similar complaints are brought forward in those places in which the silk industry is carried on. In 44 out of the 51 of the mills visited the ventilation is described as "bad." "The windows are expected to "serve as ventilators, yet they are seldom opened in "summer and never in winter. It is in winter that, "owing to the general use of gas, good ventilation is "most essential. In one mill in Derby most of the "rooms are crowded by heavy machinery, which ex- "tends from floor to ceiling and shuts out all the "daylight. Gas is burned all the day and the "atmosphere is similar to that of a gassing-room. "There is no scientific system of ventilation, and the "operatives cannot remember the windows having ever "been opened. In throwing mills an unpleasant smell "arising from the soap used in the steeping of silk "makes the absence of ventilation more disagreeable "than elsewhere."(5)

(1) pp. 116, 306. (2) p. 72. (3) pp. 117, 129. (4) pp. 100–112. (5) p. 186.

[§ 732 (c.)] (c.) Cloth industry in West of England.

(*c.*) In the cloth mills in the West of England ventilation is "generally bad. Fans are almost untried and windows are seldom opened." In one mill in Trowbridge the menders and spilers' room, which had no ventilation, was connected with another room in which the wool was scoured. The effluvia which escapes so affects the eyes that anyone who is unaccustomed to it cannot keep them open.(1)

(d.) Textile industries in Scotland.

(*d.*) The high temperature and very defective ventilation in the textile trade in the North of Ireland is treated in the next section. In Scotland the same defects are noted, and especially the absence of any method of ensuring good ventilation without exposing the workers to cold or draught. An arrangement commonly met with is that of a "shutter or skylight "in the roof under the control of the worker directly "below it. The looms rise to some height on both "sides of the worker, and she believes the effect to be "to draw down a current of air, which either causes "colds or other evils, or induces her to close the "ventilator to the discomfort of her neighbours. It is "quite common to find the ventilators stuffed with "paper or otherwise closed up, at the instigation of "the women in the immediate vicinity. Frequently, "too, the weaving sheds are ventilated by opening "windows on opposite sides, so that the workers "standing between are exposed to strong currents of "air. There is no doubt that the home training and "personal habits of many of the women help much to "prejudice them against sufficient ventilation, and it "is often difficult to get them to distinguish between "fresh air and a draught; at the same time, it must "be remembered that the nature of their work renders "them extremely sensitive to the latter."(2) In reference to the ill-constructed factories in Bristol, it is stated that "in most cases the only means of "ventilation is by open windows at the side of the "workrooms, and it is not surprising that the ill-clad "women prefer a close atmosphere and warmth to "toothache, stiff neck, and rheumatism, brought on by "exposure to draughts." In reference to this point the president of the Amalgamated Society of Card and Blowing-room Operatives, stated that the workers closed the ventilators themselves, "not because of the fresh air coming in, but because it is so ill-directed."(3) In some cases in Scotland the bad atmosphere is attributed to the rooms being over-crowded with machinery.(2) In the woollen industry in South Scotland, however, the sanitary arrangements are unusually good, though even here the atmosphere was sometimes rather close owing to the windows and ventilators being closed. In the north, the absence of appliances for keeping down the dust in the preparing departments of the flax and jute mills was complained of.(4)

(e.) Laundries.

(*e.*) The high temperature which prevails in laundries is largely due to the conditions of the work, and cannot, therefore, be wholly avoided. From the evidence, however, it appears that it can be greatly mitigated if certain precautions are taken. Air propellers can do a great deal to moderate the excessive heat. Two laundries were visited, in one of which the temperature at the hottest place was 86°, while in the other, where air propellers were used, the highest temperature was 71°. The heat is most severe in the ironing and calendering rooms, where the thermometer frequently registered from 77° to 84°, and in Glasgow in one case even 88°. In one calendering room which contained two calendars (*i.e.*, hot presses), where the temperature was very high, it was found that the "drying horses "had been rolled out of the drying closets, which were "open, and thus overheated the place." A laundress stated that this was a frequent occurrence, and that working under these conditions she had suffered severely in health. Another room was close and hot because it contained collar machines heated with gas, which gave off fumes into the room; it was, moreover, over-crowded with ironers.(5) Such causes would appear preventible. It was recently reported by the Women's Industrial Defence Committee that the London and Provincial Steam Laundry Company manage their laundries "admirably," and "fulfil all the con- "ditions which would be imposed by the most exacting "factory inspector in the matter of sanitation, venti- "lation, and fencing of machinery."(6) In a recent report of an inquiry conducted for the council of the Women's Protective and Provident League of Glasgow, by Miss Irwin, into the conditions of women's work in

(1) p. 145. (2) p. 177. (3) Reports, p. 34; Group C., Minutes, Vol. I., Silk 70. (4) pp. 298, 307. (5) pp. 17–18. (6) Report of an Inquiry into the Conditions of Women's Work in Laundries conducted for the Women's Industrial Defence Committee, November 1893, p. 12.

[§ 732 (e.)] laundries, the question of sanitation was especially noted. She attributed the great heat usually found in the ironing rooms to "the almost universal plan of "having the stove for heating irons in the centre of "the room where the workers are. A great degree of "heat is thus radiated throughout the workroom." In larger laundries this can be obviated by placing the stove in an enclosure partitioned off from the workroom. It was noted that this made "a marked difference in the temperature and comfort of the workers." Two large steam laundries were visited on the same day which had equal facilities for separate stove accommodation. In the first, where the stove was in a separate chamber, the highest temperature was 70°, while in the second, where the stove was in the centre of the workroom, the temperature at any point within 12 or 13 yards of it was 86°. In smaller laundries, Miss Irwin stated, it was almost impossible to partition off the stove owing to want of space and structural difficulties. In these cases they were very often over-crowded and badly ventilated also. The same description was given of certain small or cottage hand laundries at Acton and London, which, in addition to their other defects, were often wet and dirty. One grievance that was met with in a steam and in a cottage laundry was that the damp clothes were hung to dry over the heads of the workers, and the water dripped down upon them.(1) In Glasgow "nothing objectionable in the way of dirt or disorder" was observable. "In many of the washing houses," Miss Irwin added, "I have "found arrangements for protecting the feet of the "workers from the sloppy floors, and it seems desirable "that provision in this way should be made in all "cases. In one or two washing houses, where the "floors were of concrete, I met with an excellent "arrangement by which a sloping floor with small "runnels in it prevented the water from collecting." The ventilation in the steam laundries visited in Wales and in the convent laundries in Ireland was found to be "excellent."(2) That in the steam laundries visited in London was described as "sufficient to secure fresh air," except in one place which was "unduly over-crowded." In one workroom it was remarked that the machines were abnormally and dangerously crowded together.(3) As in the case of shop assistants and milliners, the long hours worked make the whole question of sanitation especially important. It may be noted that laundries are only under the Factory Acts in one particular. By a clause in the Act of 1891, factory inspectors are empowered to inspect the sanitary arrangements "upon information received." This clause, it was observed, "does not seem to be known."(4) Strong recommendations are made in the report on the Glasgow laundries for the inclusion of laundries under the Factory and Workshop Acts. This point is, however, dealt with under another head.

(f.) Shops and work-rooms for the making of wearing apparel.

(*f.*) Confinement in a close atmosphere, and in rooms with defective ventilation, is a grievance mentioned with regard to shop assistants, who are under no protection of the law in these matters. This grievance is still more prominent in the case of dressmakers, who constantly work in close, crowded, or cold rooms. In both instances the long hours worked make the question of sanitation especially important. It is not uncommon to find dressmakers working in mid-winter in rooms without any fire or any heating apparatus. In one case the extreme cold brought on erysipelas.(5) Sometimes the rooms were only warmed by the objectionable methods of over-crowding and gas jets. One witness stated that she frequently worked in her jacket until the room became hot from those unwholesome causes. In reference to the sanitation of these workrooms H.M. Inspector for Bristol remarks that "it is a "difficult problem how to secure proper ventilation "and *warming*, both very necessary in a sedentary "occupation in which long hours are commonly pre-"valent."(6) In a detailed report on the conditions of labour of dressmakers, H.M. Inspector for the Southampton district expresses his opinion "that the "certifying surgeon should certify that the factories "and workshops, when overtime is to be made, are fit "for such work. It should always be borne in mind "that in the majority of cases the work is especially "trying, the rooms stuffy and ill-ventilated, and the "air rendered very impure by the large quantity of "gas required to be burned."(7) "The provisions as to over-crowding," said one of the Lady Sub-Commissioners, "seem to need more stringent enforcement."(8)

(1) pp. 18–21. (2) pp. 239, 3, 28. (3) p. 17. (4) p. 18. (5) pp. 89, 13, 91. (6) Chief Factory Inspector's Report for 1891, p. 11, Mr. Johnston. (7) Chief Factory Inspector's Report for 1892, p. 90, Mr. Bowling. (8) p. 13.

[§ 732 (g.)] (*g.*) Details are given in the reports of the Lady Sub-Commissioners and the appended tables of reference of the very unsatisfactory sanitary condition of a large number of small workshops in great towns such as Birmingham, Liverpool, Manchester, and Glasgow. They appeared only too often to be ill-ventilated, ill-warmed, over-crowded and dirty.(1) In Glasgow especially many of the tailors' workshops were noted as particularly defective. "As a rule they are either "'attic' or what the workers term 'pit' shops. In "the former case they usually consist of long low "garrets, with a 'lean-to' roof, and are reached, it may "be, by five or six flights of close, filthy, evil-smelling "stairs . . . By an almost universal and highly "objectionable arrangement, the tap that supplies the "water for drinking purposes is also to be found in "the limited enclosure of the lavatory. In summer "the heat in these attic workshops is intolerable, "owing to their nearness to the roof and the skylight "windows by which they are lighted, while the slope "in the wall and the ceiling cuts off a large proportion "of the cubic feet of air. In the winter the workers "suffer equally from the cold . . . In the 'pit' "shops there is sometimes an entire absence of "daylight, when the gas is kept burning from morning "till night. These shops, which are practically cellars, "are usually reached by trap-stairs, unlighted and "dangerous of descent to those not familiar with "them. These frequently terminate in close, dark "passages that serve to further cut off the work-"rooms from the outside air. The atmosphere is "usually heavy with the fumes of gas. . . . I have "not found that the fact of a shop being a first-class "one ensures that the accommodation provided for "the workers is superior to that of the lower grade "shops, or that the place a shop occupies in the "trade classification can be taken as any indication of "its sanitary condition and appointments. I have "found clothing factories, slop shops, and Jewish "workshops, though rarely the last-named, in which "the lighting, ventilation, and sanitary accommodation "were admirable, while first-class employers might "be found who lodge their workers in attics or cellars, "where arrangements for health and decency are alike "disregarded."(2)

(g.) Workshops.

733. From the foregoing evidence it appears that the sanitation in these places and industries is greatly in need of improvement. The reiteration of the same complaints of impure atmosphere, closeness, cold, over-crowding of machinery and of workers, the ignorance of or indifference to sanitary principles on the part of many employers, managers, foremen, and also of the workers themselves, the absence of necessary sanitary appliances such as ventilators, air propellers, &c., is very striking. Putting aside the special cases in the textile industries in which the process performed is inherently unhealthy, there appeared to be no reason why the abuses detailed above should not be remedied to a very large extent. The fact that in not a few instances, mills in all districts of the textile trade, workshops, laundries, shops and dressmaking establishments were found, in which the sanitation and general arrangements were on all points overything that could be desired, supports this view. What appears to be necessary is the promulgation and enforcement of some "system of ventilation which will give a sufficient "supply of fresh air, without causing bad draughts."(3) This would overcome the very natural objections of the women workers. No doubt difficulty and expense would be entailed in many cases, more especially where the workshops and factories are unsuitably constructed. But further administrative steps would seem to be required in order to fulfil the clause in the Factory Act which decrees that factories and workshops shall be kept in a "cleanly state," not "over-crowded" and "well ventilated." One of the Lady Sub-Commissioners suggests that "at the very least "some rule might be made and insisted on that "all appliances for ventilation should be put into use "during meal hours."(4) She further advocates "the "simple and effective method of raising the window "some 10 or 12 inches and introducing a board to fit "this aperture, while a supply of fresh air is allowed "to escape upwards between the open halves of the "window." When this was explained it was usually "welcomed as an easy and inexpensive form of "ventilation." "Tobin's ventilators" have been introduced in some of the newer factories with great success. "Excellent ventilation" was provided in several flax and jute mills in the West of Scotland by

Question how far these defects are preventible.

[§ 733.] means of "circular fans" and "patent air exhausters." In one case where electric light had been substituted for gas, the employer had noted "a marked improvement in the health of the workers."(1) This improvement had also been effected in two silk mills.(2) Another most necessary step appears to be the inclusion of some provision for warmth in the requirements for the sanitary condition of workshops and factories.(3) The recently appointed local sanitary inspector in Nottingham, Miss Hawkesley, asked one of the Lady Sub-Commissioners to report the fact that she has "found many workshops and factories in- "sufficiently warmed, and that the desire to secure "warmth is constantly the cause of the absence of "ventilation for which insufficiently warmed rooms are "remarkable."(4)

II. HEALTH.

A. ESPECIALLY DANGEROUS OR UNHEALTHY PROCESSES IN CERTAIN EMPLOYMENTS.

tton, en, and x indus- es. .) *Lan- shire.*

734. (*a.*) The special processes in cotton, linen, and flax manufacture which cause injury to health are heavy steaming, wet spinning, sizing and carding. In some cases the danger lies in the high temperature, in others in the dust necessitated by the particular process. "Sizing," said a cotton manufacturer, "is absolutely necessary to make the yarn weave at all." In order to make the atmosphere damp enough to work upon the cotton yarn, the air has to be "artificially humidified" by means of steam. The greater the amount of size, the greater the amount of steam necessary. Hence arises the grievance of "heavy steaming." Steam is usually injected in jets; sometimes the floor is flooded with water. As the object is to keep the atmosphere very moist, as little ventilation as possible is allowed. This system has very baneful effects on the health of the workers, and it was the grievances on this score that the Cotton Cloth Factory Act of 1889 was designed to meet.(5) By this Act the degree of the temperature and the amount of moisture in the air was regulated. Complaints are, however, made by the Lancashire operatives, that although great improvements have been thus effected, it is impossible for the Act to be thoroughly administered with the present staff of inspectors, and that evasions of the law are of frequent occurrence. Two assistants have recently been appointed to assist Mr. Osborn to whom was given the administration of the Act, which he reports is now better carried out. But Mr. Birtwistle, secretary to the North-east Lancashire Association, and another weaver were of opinion that the work of inspection was "more than half a dozen" could attend to.(6) The Lady Sub-Commissioner who visited Lancashire stated that after her inspection of a certain mill she had "learned "from the operatives that the steam had been turned "off and the thermometer watered immediately before "(she) passed through." She was also informed that this was habitually done twice a day at the time appointed under the Act for registering the temperature. She further adds "Where steam-jets are used they are "frequently within a few inches of the weavers' heads, "and where this is so they complain of severe headache. "Much suffering is also caused by the condition of "the floors, which from condensed steam and frequent "'digging' (*i.e.*, flooding with water) are always damp. "In one mill the weavers state that the water rises "above the top of their clogs, and I have myself found "most of the floors in a very wet and dangerous "condition. When the warps are heavily sized the "steam or water mixes with the size dust and forms a "slippery mixture upon which it is difficult to walk. "Two recent accidents from this cause were reported. "A tackler slipped while carrying a beam and died "from the effect of the fall two days afterwards. A "weaver also fell and, catching his arm in the wheel "of a loom, was seriously injured. Rheumatism is very "common in these mills. . . . All the weavers I "have seen complain of general prostration and of "rheumatic pains. The former they attribute to the "excessive heat of the shed, and the latter to the "sudden change from the hot atmosphere laden with "moisture to the cold outer air in the winter or even "in the summer months. Steam is most heavily used "in the winter, but some continue its use throughout "the year." An important suggestion was made by the manager of a mill in Tyldesley. He stated that he had once held the common opinion that heavy steaming was essential to the manufacture of cotton cloth under the present condition of the trade. But he had now proved that a better quality of cloth could be made from the same quality of cotton, and at the same cost, if the "softening" were introduced into the size while the warp is "slashed" instead of being introduced by the aid of steam whilst it is woven. "His experience had "extended over several years, and he found that the "looms under this system produce the same amount per "week as they did under the old."(1) Complaints were also made both in Ireland and Lancashire with regard to the dangerous effects of dust and fluff generated by certain processes. Thus the salts and China clay used in the size for cotton warps in Lancashire is condemned by the weavers. Several women were noticed whose lips were coated with white size dust, and the medical officers of this district attribute to this cause the various forms of lung disease from which weavers suffer who are employed on heavily-sized warps.(1) The same evil effects were produced from the fine fibrous dust in the cardrooms in Lancashire and in preparing rooms in the flax mills in Ireland. In the former district it was almost always noticed even in lofty rooms where the air was clear. When a poorer quality of cotton is used, there is, in addition to the dust, a considerable quantity of "fluff." In the great majority of cases the condition of the operatives' clothes and hair revealed the fact that dust was being rapidly generated, and demonstrated the need of careful ventilation. The use of fans in card-rooms was, however, exceptional. Examination of the few which existed showed that they "extract" or take away a large quantity of dust.(2) It was stated by the secretary of the Blackburn Weavers' Association that "90 per cent. of the weavers die from chest diseases, pneumonia, bronchitis, and phthisis." He further corroborated Dr. Barwin's opinion that the death-rate amongst ordinary weavers is much greater than that amongst ordinary people, and greater amongst those from 15 to 25 years of age than amongst older people.(3)

[§ 734 (*a*)]

(*b.*) The same terrible effects were ascribed to very much the same causes in Ireland. Not only do the linen operatives suffer from the high temperature as already mentioned, but the health of those employed in the carding and preparing rooms is injured by the flax dust. In a few cases the ventilation was good, but more often it was bad; there were either no fans or not enough of them. The statutory regulations regarding the temperature and moisture in the cotton and flax mills of England and Scotland do not appear to apply to the linen and flax mills in Ireland. In many of the wet spinning rooms the excessive moisture in the air makes the women and children wet through. In only a few cases do the firms supply waterproof aprons to the spinners in the rooms. It may be noted that by clause 37 of the Factory Act, "a child, young person or woman "shall not be employed in any part of a factory "in which wet spinning is carried on, unless "sufficient means be employed and continued for "protecting the workers from being wetted, and, where "hot water is used, for preventing the escape of steam "into the room occupied by the workers." The attempt is only occasionally made to drain the water from the floors and to take preventive measures.(4) In a cotton mill at Johnstone in West Scotland it was observed that care had been taken to prevent the usual discomfort to the workers attendant on "wet spinning." The frames were protected by boards some 8 or 10 inches high, which keep the water from wetting the floor and the clothes of the workers.(5) This appears to be such a simple remedy that its universal application might well be enforced. Medical evidence was given as to the very injurious effects of the high temperature and the moisture in weaving sheds and wet spinning rooms on the health of the worker, and especially upon the children employed.(6) Abundant medical evidence was brought forward on the subject of the injurious effects produced on the health of the operatives of Belfast by the conditions of labour. These, in the opinion of Dr. Purdon, the physician to the Consumptive Hospital at Belfast, were particularly noticeable in the case of children, and various recommendations on this point and on the half-time system were made by him. He further stated that the present high mortality from consumption in the city was principally due to the unhealthiness of the various occupations in linen spinning and weaving mills. It was noted that in the smoothing rooms, when irons were heated by gas, the air was much vitiated and the girls complained of headache and finally of chest affections. Dr. Purdon stated in this connection that he believes "smoothers" to be specially subject to

[§ 734 (b.)] phthisis, and that he has noticed frequent cases of pharyngitis amongst them, which he considers is produced by the gas-wasted atmosphere in which they work.(1) Ten persons were visited in the Royal Hospital and in the Workhouse Infirmary at Belfast, of whose illnesses details are given. One woman of 28 was in an advanced stage of phthisis. She attributed it to the high temperature and gassy atmosphere of the smoothing room in which she had worked. Four other women of 25, 26, 33, and 35 were suffering from the same complaint, brought on by work in the preparing rooms of flax mills. In another case bronchitis was produced. Three girls of 14, 16, and 17 who had worked in "spinning rooms" in the moist heat on a wet floor were now suffering from rheumatism. A woman of 28 who had worked in a weaving shed, where she had suffered greatly from the damp and intense heat, had been attacked by both rheumatic fever and bronchitis. It was stated that in the year 1891–2 the Society for providing Nurses for the Sick Poor in Belfast had had 150 deaths from lung disease out of 202. "Out of a total of 804 cases treated during the "year, 460 were different forms of lung disease. The "women suffering from consumption are almost in- "variably mill workers. The nurses constantly find "cases when several members of a family, all of whom "had been healthy, die of consumption induced by their "mill and factory work." The following case was quoted: A man and his wife who were quite healthy, and came, moreover, of healthy families, had seven children, five of whom died of consumption at the respective ages of 16, 17, 18, 19 and 36. The son, who died at the age of 36, had lost two children of the same disease at the ages of 16 and 18. In all these cases, the children had begun to work in a large spinning mill, between the ages of 10 and 11.(1) But the most startling fact of all is supplied by the statistics drawn up for the Belfast Town Council by the medical officer of health. He states that of the 6,537 deaths registered during the last year (1891), 1,017 are attributable to phthisis, whilst 1,784 are due to disease of the respiratory organs. In the preceding year (1890), 2,787 persons had died from "pulmonary affections." He further discusses the causes of this "terrible loss of life." The town though badly situated and damp, is, he remarks, otherwise healthy and not generally overcrowded. "As is well known, "a large proportion of our working-class population "is employed in mills and factories, and I would point "out that the nature of their employment must cause "any of them having a predisposition to chest affec- "tions to be ready sufferers therefrom. Breathing as "they do, a close heated atmosphere, laden with "particles of flax dust, fibrous and other matters "irritating to the lungs; going from thence directly "it may be, into the cold, damp, or frosty air; poor "and lightly clad; often too young (especially the "female workers) to bear the exposure to which they "are subjected, it is hardly to be wondered at that "the mortality from these diseases is as great as it is. "There is little doubt but that any arrangement by "which these changes of temperature could be made "less frequent or less trying would be attended with "considerable benefit to the health of the workers. "Unhealthy occupations principally affect the respira- "tory organs. The dust of the flax in the manufacture "of our staple industry is a serious cause of bronchitis "and phthisis, and should lead if possible to greater "supervision in the ventilation or filtration of the air "in our large spinning mills." He further advocated "an alteration of the hours of labour so as to commence "later in the morning, especially during the winter "months, if practicable.(2) In face of such statistics as those just quoted from the last report of the Belfast medical officer, the importance of regulations concerning temperature can hardly be over-estimated. Regulations concerning the degree of temperature and moisture such as those enforced by the Cotton Cloth Act in the cotton mills in England, are, as before stated, wanting in the case of the linen and flax mills in Ireland. Those concerning ventilation in the Factory and Workshop Act of 1878 apply indifferently to England, Scotland, and Ireland. It is there enacted that factories and workshops should be "ventilated "in such a manner as to render harmless, so far as "practicable, all the gases, vapours, dust, or other "impurities generated in the course of the manufac- "turing process or handicraft carried on therein that "may be injurious to health." If this were thoroughly carried out, it would meet most of the grievances detailed above. For instance, one flax-spinning mill was visited in Johnstone in West Scotland, in which "excellent ventilation" was provided by means of "circular fans and patent air-exhausters."(1) There is however, a provision in the Factory and Workshop Act of 1891 by which the Secretary of State is empowered to step in and make whatever provision he sees fit for the safety or comfort of the workers in any "process" which, in his opinion, is "dangerous or injurious to health." It is under clause 8 of this Act,— "special rules and requirements as to dangerous or "unhealthy incidents of employment"—that any of the unsatisfactory conditions under which the linen and flax industry is carried on could be remedied. [§ 734 (b.)]

(1) p. 324. (2) Appendix, Reports, p. 330.

735. (*a.*) Complaints were received in Yorkshire and other centres of the textile industries with reference to the unhealthiness of various occupations or processes occasioned by the materials used and the imperfect ventilation. In wool combing the temperature was said to be extremely high—towards the end of the week the workers believe it rises as high as 100°. This was corroborated by a member of the Bradford and District Machine Wool Combers' Association, who stated that the dust and heat made that occupation peculiarly unhealthy. The lowest temperature at which they worked was 80°, and the usual temperature was between 90° and 100°. The appliances for ventilation were, he asserted, in a very defective condition.(2) All the women interviewed who worked in wool-combing sheds complained of the effects of the intense heat upon their health; one witness said that she had been ill for seven weeks in consequence.(3) A Bradford employer subsequently stated that in the wool-combing department of his own mills the temperature would not rise above 70°.(4) Other textile industries. (*a.*) *Wool combing.*

(*b.*) The conditions of labour in rag sorting, rag picking, rag weaving, and kindred trades, where the character of the material used presents peculiar difficulties, were also complained of. It was stated that large quantities of the rags are foreign, and arrive in a filthy condition, having been closely packed together, sometimes for over 12 months. These are sorted and picked and carbonised for the manufacture of "shoddy," and in most places where this is done "the atmosphere is foul and loaded with dust." After a visit to one place, where the atmosphere was particularly offensive, the Lady Sub-Commissioner who was investigating this trade was attacked by "shoddy fever," a complaint from which new hands suffer. The injurious effects of the process of carbonising were brought forward by the women workers, and it was noted that the atmosphere was affected by hydrochloric acid gas, which was escaping from imperfect pipes. It appeared, however, that the conditions of labour were capable of a good deal of improvement. In Mr. Mark Oldroyd's shed at Dewsbury certain classes of rags were shaken before being sorted, and both this shed and that of Mr. Eli Townsend at Ossett, who had introduced "fans," "compared favourably with the usual standard in the district."(5) A "model" rag factory was also instanced at Leith. "Every possible means were taken to "minimise the disagreeable features necessarily be- "longing to the work. The rooms are large, and "there is ample floor space, and even in the depart- "ments where the materials dealt with were most "uncleanly, the atmosphere was not unpleasant to any "serious degree."(6) The general conditions in shoddy and flock manufactures in the West of England were better than in Yorkshire. A good deal of the sorting is done after the rags have been washed.(6) In reference to this subject, a representative of the West Riding of Yorkshire Weavers' Association expressed his opinion "that the rag industry, which the heavy "woollen district is much noted for, ought to have "some kind of inspection or examination accorded to "it, on account of the dirty nature of so much of the "material that comes from abroad."(7) Similar defects with regard to dust and ventilation were observed in the rag-weaving sheds in Yorkshire, though in these cases the dust was not of such an objectionable character.(2) (*b.*) *Rag picking and sorting, &c.*

(*c.*) The evils arising from the use of defective appliances where gas is used, as in the case of "calendering," "ironing," "smoothing," "carbonising," &c., have already been incidentally touched upon. In the silk manufacture, "gassing" is considered particularly unhealthy. This process is when the thread is passed rapidly over gas jets to remove the (*c.*) *Gassing.*

(1) p. 190. (2) Group C., Minutes, Vol. I., Heptonstall, 5907–16. (3) p. 100. (4) Group C., Minutes, Vol. I., Arnold Forster, 6456–60. (5) p. 296. (6) p. 144. (7) Group C., Minutes, Vol. I., Turner, 5783.

[§ 735 (c).] loose fibre. Notwithstanding considerable window ventilation, the atmosphere of one mill in Yorkshire was found to be loaded with the products of gas combustion and very much heated. Dr. Bell, of Bradford, it was stated, is strongly of opinion that employment in the gassing room is very injurious to health, and it was noted that the women thus employed looked unhealthy; some extremely so.(1) In the cloth trade in Cheshire and Staffordshire the same process was carried on under the same conditions, and the same complaints as regards the effect upon the health were made. The gassing rooms were, as a rule, ill-ventilated, or, if well-ventilated, structurally unsuitable.(2)

(d.) Fustian and velvet cutting.

(*d.*) Fustian and velvet cutting was mentioned as another unhealthy industry. The woven cloth is soaked in lime before it is placed on the long frames on which it is stretched and cut. The women believe that the lime dust which arises during the last process is injurious to the lungs and the sight. It was observed that no provision was made for extracting this lime dust. Some witnesses complained of prostration and injury to the feet caused by the distance walked daily in the factory in the course of the work. This was estimated by the medical officer of health to be as much as 30 miles. He was of opinion that fustian and velvet cutters suffered especially from "anæmia and affections of the feet."(3)

White lead industry. (a.) Nature and extent of lead poisoning in North of England.

736. (*a*). A special investigation into the conditions of employment of women in the manufacture of white lead was made by one of the Lady Sub-Commissioners. She states in her report (December 1892) that in spite of the rules now in force for the protection of operatives, "a "considerable number of women and girls are affected by "lead poisoning after having worked but a few months "or weeks, and some of these die within two or three "days, in a state of coma. Many recover from the "first attack, are suspended from work by the doctor's "order, return after the prescribed period has elapsed, "become poisoned again, and die from the effects of "their work at a later period." As a great many die after they have taken up some other work, and also from diseases indirectly induced by lead poisoning, it is impossible to obtain complete statistics as to the deaths really due to that cause. Within five years 135 cases of lead poisoning were admitted into the Newcastle Infirmary, 94 women and 41 men; eight of the patients died. The inquests held from 1889 to 1892 in the Newcastle district show 23 deaths attributed to lead poisoning; 22 women and one man. The majority of the deaths occur between the ages of 17 and 30, although by the Factory Acts anyone under 18 years old is prohibited from working in the white lead industry. Sixteen persons suffering from lead poisoning were examined and details of their symptoms were obtained, of which the chief were colic, convulsions, "wristdrop," blindness, and paralysis. It was constantly stated that the children of married workers died in convulsions at their birth.(4) Corroborative evidence was also given by male white lead workers before the Commission as to the injurious effects of the occupation on the health of women.(5) Three cases of sudden death from lead poisoning were supplied by Dr. Oliver, Physician to the Royal Infirmary, Newcastle-on-Tyne.

Medical opinion on the subject.

He held very strong opinions as to the special danger of this employment for women, and summarised his opinion and experience thus: (1) "That women suffer much more frequently and severely than men." (2) "That women "suffer at an earlier age than men: that, for example, "of the 135 patients admitted to the Newcastle In-"firmary, whilst up to the age of 23 no men were "affected, 49 women had already suffered." (3) "That "acute lead poisoning attended by cerebral symptoms "is much more fatal amongst women than amongst "men." He further dwelt on the special disabilities of women. "The baths which constitute a necessary "precaution against lead poisoning should be used with-"out intermission by lead-workers. Women at the age "when they are usually employed in the factories are "unable to avail themselves of this precaution from "time to time unless they run very serious risks as "regards their general health." He laid great stress on the injurious results to the children of the women who work in the white lead industry; this is treated under the head "Married Women." The detailed reports of the visits paid to white lead works in Newcastle, and the evidence given by workers themselves amply corroborate his very unfavourable opinion. In the year 1891–2, 29 workers (of whom 27 were women) were suspended at one firm by the doctor's orders out of a working staff of 30 people. At another [§ 736 (a).] firm 111 out of a staff of 154, among whom were very few men, were suspended. At some other works, of which the index number is 493 (not in Newcastle) it was stated that ten women and two men had died from lead poisoning within the last four years. In this case, however, the legal regulations were little attended to, and the conditions under which the work was carried on were peculiarly miserable.(1)

(b.) Evidence from Scotland, and of H.M. Inspectors of Factories.

(*b.*) In other places it would appear that this industry is much less unfavourably regarded and that the effects produced by it are less serious. Some white lead works were visited at Glasgow where "the majority of the women seemed disposed to make light of the danger to health arising from the lead dust. Their immunity, however, appeared to arise chiefly from the intermittent character and short duration of their labour. The manager of the works stated that they reckoned on losing one worker every three months through sickness. Very few cases of lead poisoning were reported from the infirmary, and the medical officer of the lead works stated that no death from lead poisoning had occurred ever since the works were opened about 15 years ago. There was an occasional case of lead colic which caused inability to work for a few days. "This occurs mostly in cases where the "general surroundings are bad, causing impairment of "the general health and thereby predisposing to ill-"ness." "The state of matters," he adds, "which "I see reported from the Newcastle district has no "existence here."(2) The reports of H.M. Superintending Inspector for Scotland and the north of England also give a less grave account of the actual conditions prevailing and the effect of the occupation upon the health of the workers than that given by the Lady Sub-Commissioner. Stress is laid upon the great improvement that has taken place since this industry was brought under the Factory Acts in 1883, which the recent addition of "special rules" has accentuated. With regard to Newcastle it is stated that, in the opinion of two medical officers in charge of three large lead factories, lead poisoning, especially in its more serious forms, is on the decrease. This was especially the case in a white lead factory where the rules are strictly enforced and where a weekly medical examination of all the workpeople has been practised since 1888. In that year half the number of those employed suffered from some form of lead poisoning. In 1892, the number had decreased to one-third.(3) This proportion, however, coming as it does from one of the best conducted factories is sufficiently large to indirectly support the Lady Sub-Commissioner's view of the gravity of the situation. It is stated that the "difficulties in dealing with this particular employment "are materially increased by the carelessness, neglect, "and stupidity of the people themselves." At Newcastle the work is unskilled, heavy, and laborious, but the hours are short and the pay fairly good. Owing to the few openings for women's labour in this district there is keen competition for admission to the white lead works. One woman at Hebburn died, because, as she was the bread-winner of the family, after having felt signs of lead poisoning she went on working instead of reporting herself ill. In other cases women rejected at one factory as "unfit," secure work at another under false names and addresses. Again they misrepresent their age. A girl of 17 recently died who had given her age as 23.(4) It is also stated upon medical authority that it is those "with a family predisposition to lead poisoning" and "the weak, the careless, the ill-cared for, and the dissipated, who suffer chiefly." It is, however, remarked that it would be "a libel" to say that these constituted "the majority of the female workers in white lead factories." "I do not see why," writes the medical officer of some lead works in Scotland where not a single death had occurred from this cause in the last 10 years, "we should not have com "plete immunity from this illness, if the workers "themselves would only avail themselves of the means "which are there provided for their protection."(5)

(c.) Inquiry of Lady Sub-Commissioner into working of "special rules."

(*c.*) But the chief complaint in most of the white lead factories visited by one of the Lady Sub-Commissioners in England is that adequate means are not provided for the protection of the workpeople. The working of the "special rules" now in force in this industry was carefully noted, and various suggestions and recommendations were made.(6) It is enacted that "occupiers" shall provide sufficient bath accommo-

(1) p. 100. (2) p. 136. (3) p. 141. (4) pp. 151-5. (5) Group C., Minutes, Vol. III., Grieg, 21, 802-5.

(1) pp. 151-5. (2) p. 285. (3) Chief Factory Inspector's Annual Report for 1892, p. 16. (4) Chief Factory Inspector's Annual Report for 1892, pp. 14, 17, 19. (5) Chief Factory Inspector's Annual Report for 1892, pp. 15, 19. (6) pp. 152-3.

[§ 736 (c.)] dation for all men and women employed. In many cases that provided was found to be insufficient. In one factory there was only one bath for all workpeople, both men and women. Occupiers must, by the special rules, further arrange for a weekly visit by a doctor, who shall examine every worker individually. In one factory it was stated that the doctor has only paid one visit during the last few years, and in another, that though he paid a weekly visit he did not examine the patients individually, but only called out their names. Superintendents and persons in charge of departments are required "to cause each man or woman to take a bath at least once a week." Besides the difficulty that is occasioned by inadequate accommodation, it was pointed out that in performing a dangerous process such as "drawing a stove," which frequently takes two days, a bath should be taken on each day. At some lead works near Glasgow the manager stated that women could use the baths at most once a week; that this rule was difficult to enforce, but they "would "be spoken to, if more than three or four weeks passed "without a bath being taken."(1) The rule as to the cleanliness of baths, &c., &c., was "fairly well kept," except that the baths were sometimes discovered to have a deposit of lead at the bottom. The rule providing for a sufficiency of towels, &c., in the bathrooms was "certainly not universally observed." In one case there was only one small one for all the women, so that they were "obliged to use their own clothes," in another the towels were in "a disgusting condition." In only one instance (the Mersey White Lead Company) was the rule enacting that a sufficient supply of sulphuric acid, or other sanitary drink, should be provided and taken, fully carried out. Another rule requires that an order on the visiting doctor shall be given to anyone complaining of being unwell. All the witnesses from factory 493 state, that when they have demanded it, it has been refused. Hence they are obliged to go to the workhouse. The operatives in some cases objected that the overall suits which they are obliged to wear during certain processes do "not prevent the lead dust from reaching "their persons, also, that it is impossible to continue "work in the stoves or white beds whilst wearing a "respirator." The respirators provided in some places were stated to be unsuitable or useless. The woollen ones in use in some places "after frequent washing, shrink until they hardly cover the mouth." It is enacted that in certain departments in which dangerous processes are carried on special attention should be paid to ventilation. To this rule it was found "little attention was paid." It appeared that out of the six white lead factories registered in Newcastle in only one were all the rules "fully carried out."(2) In spite of this, however, H.M. Inspector for that district remarks, with reference to the amended special rules, "that the employers loyally endeavour to carry them out."(3)

(d.) Recommendations and suggestions.

(d.) The following suggestions were made by various persons giving evidence on this subject to the Lady Sub-Commissioner. (i.) That the number of baths should be regulated according to the number of people, and that persons "drawing a stove" should be enabled to take a bath each day. (ii.) That the examining doctor should be responsible to the Government instead of, as at present, to the employer. (iii.) That a chemical solution should be used to ensure the absolute cleanliness of the baths. (iv.) That the rule which prescribes that every white bed, &c. should be thoroughly watered, should be extended so as to include the watering of stove floors before sweeping. (v.) It was observed that the women who carried trays of dried lead from the stoves to the barrels were not supplied with respirators. The work is especially dusty, as a man stands by and beats down every trayful of lead which the women tilt off their heads into the barrel. At the works of the Mersey White Lead Company several barrels were placed in a row, so that the women were not obliged to return to the barrel from which the dust was rising. It was observed that the compulsory adoption of machinery for pressing appeared "particularly desirable." (vi.) It was further noted that in the regulation with regard to dust, no attempt is made to protect the hands and arms of the workers which come constantly in contact with the lead, and that in those relating to the special ventilation of certain departments, no mention is made of "white beds," though these are often "filled with dust and absolutely unventilated."(4) These defects would appear to be partially met by the methods adopted in the lead works of Messrs. Alexander Fergus & Co., at Ruchill, near Glasgow. "Flexible tables have been "fitted up in the stack by which the white beds can be "thoroughly saturated with water without any difficulty. "Where this hose is not in use and the water has to be "carried by hand, there is a temptation to stint it in "quantity." (vii.) In the same works also "the most "laborious part of the work, the carrying of the blue "lead to the stack, and the carrying of the carbonised "lead from the white bed to the grinding rollers is "greatly mitigated by the use of hoists. The ordinary "weight of a tray full of lead carried on the women's "heads in these operations is 50 lbs. This is severe "labour and the success with which the plan at the "Ruchill works is carried on convinces me that there "is no necessity for it."(1) (viii.) The process usually admitted to be the most dangerous is that of "drawing stoves." At the works of Messrs. Cookson and Co. at Howden, in the Newcastle district, this process has been abolished and replaced by an entirely unobjectionable system, which has not affected the excellence of the material. Messrs. Locke, Blacketts are also trying a new system of drying by rapid motion.(2) A patent process with the same object was also mentioned by one of H.M. Inspectors which had been recently introduced by Messrs. Johnson & Sons, Limited, with the same object. "The manager speaks highly of the "process. As contrasted with the stoves one man "does the work of nine. Accepting the utility, the "sanitary advantages are obvious and manifest."(3) It is stated that at Messrs. Cookson's works the percentage of illness has become very low since the abolition of the stoves.(4) (ix.) Two recommendations were made by Mr. Slaen, the manager of the Mersey White Lead Company where every regulation appeared to be made to ensure the safety of the workers. He recommended concrete instead of wooden floors in those departments in which vibration is caused by the machinery. Dust is thrown up from a wooden floor, whereas this cannot occur with stone or concrete. (x.) He also provides a gargle for those working in dusty parts of the factory and encourages his workpeople to leave their work for a few minutes if possible every hour throughout the day and use it.(5) (xi.) Another preventive measure is "the practice of giving cooked food to white lead workers," which strengthens their power of resistance to the influence of the poison. The health of the workers in factories where this is done compares favourably with that in other places. Thus at the "well regulated" works at Ruchill, "a breakfast of porridge is "given, and soup or broth with meat in it to the women "engaged at the stoves." The medical officer reports, "I have not had a single case of sickness for a con-"siderable time . . . There are a good many "women there now who have been employed for many "years, and who look as well, and are as fit for work "as when first employed, and many who are married "are at present healthy, happy mothers." At the works at Hebburn, the women are given milk before beginning work, soup at dinner time, and beer if employed in charging or drawing stoves. At the end of the first year after this plan had been adopted, it was found out that the medical order had decreased by 23 per cent. The medical officer of this firm attributed the recent "marked improvement in the health of the workers," to three factors: (1) The enforcement of the most scrupulous cleanliness; (2) Regular and careful inspection; (3) The provision of a substantial daily meal.(6) The evidence collected in the Lady Sub-Commissioner's report on the subject of the white lead industry in England points undoubtedly to the special susceptibility of women to lead poisoning, and as the result of his experience the manager of the Mersey White Lead Manufacturing Company was of opinion that women should not be employed in the dangerous portions of the work, for which the nature of their clothes renders them particularly unsuitable. In his own factory they only work upon "blue beds," which are quite harmless.(7) On the other hand it would appear from the other evidence already quoted, that if the workers are in sound health, and the "special rules," which would seem to require slight expansion, are rigidly enforced; and if, again, various suggestions and recommendations in the direction of improved methods in some cases voluntarily followed were universally adopted, the dangers attending this particular industry would be reduced to a minimum. The Lady Sub-Commissioner

[§ 736 (*d.*)] summarises her conclusions thus, "Although the two "most dangerous conditions in the manufacture of "white lead are found in white beds and in the stoves, "in all its stages, except that of the blue beds, there is "a certain amount of risk; and this is true in spite of "all care. The risk is diminished or increased accord- "ing to the precautions adopted; so that a relatively "harmless process, under careless management, may "become more injurious than even "white beds" or "stoves," when the proper precautions are taken. "Lead may be taken into the system through the skin "and through the respiratory and digestive organs. "The means of prevention are mainly within the "power of the employers."(1)

Summary of report of the Departmental Committee on the White Lead Industry. (C.7239).

737. The Departmental Committee appointed in April 1893 to investigate the various lead industries have just issued their report (December 1893). The conclusions on the subject of the conditions of employment in white lead works corroborate to a very large extent those arrived at by the Lady Sub-Commissioner who made this the subject of special inquiry in England. As has been shown in the preceding paragraph her main contentions were: that though certain processes in white lead manufacture were more harmful than others, all were attended with some danger; that women, and especially young women, were more susceptible to lead poisoning than men; that even where the existing special rules were fully carried out, they required expansion on some points. The following is a brief summary of the conclusions contained in the report of the Departmental Committee. It will be seen by comparison with the previous section that the recommendations there made with regard to the special rules are not in all points of detail identical with those contained in this report. The defects noted, however, were in the main the same. The Committee record their belief that "lead and all its "compounds are in a greater or less degree poisonous "and that the handling or use of each, or of all of them, "is attended by danger." They were further of opinion that (*a*) women are more susceptible to lead poisoning than men, and (*b*) young girls than full grown women. On account of the impossibility of altogether obviating the dangers inherent in the white lead industry the Committee recommend, (1) "that no girl under the age of 20" be employed in a white lead factory, and (2) "that no woman be employed in the "white beds, the rollers, the wash-becks, the stoves, or "in packing dry white lead, and that these departments "should consequently be worked in future only by "adult males." Having regard to the drastic nature of the proposed change, they would suggest that this provision should not come into force until January 1896. In four works which were visited the women were excluded from all direct contact with white lead. The opinion was expressed that the number of women who would have to be replaced owing to this provision would not be more than 600. The Committee noticed "that "the works in which the largest number of cases of "lead poisoning have occurred are those where there "has been the least expenditure of money and care in "precautionary measures for the health of the opera- "tives." They are glad to report that the "Special "Rules issued in 1892, especially those having regard "to the weekly bath and to the periodical medical "examination, have been attended with most beneficial "effects." The Committee attach "the utmost impor- "tance to cleanliness, to the medical inspection, and to "a sufficiency of good food." They trust that the custom of certain firms who give their employées some food, either before beginning work, at eleven o'clock, or at the dinner-hour, will become universal in the trade. The Committee further recommend the following addition to the existing "Special Rules." (3) The institution of a medical examination previous to the employment of women. (4) The requirement of a medical certificate after absence through illness, before re-employment, for both sexes. Any worker attempting to evade this rule should be liable to a fine. (5) The requirement of a certificate of birth or baptism, or other proof of age, for women, before employment. (6) The reduction of the price of such certificate to not more than 6*d*. (7) The adoption of the overalls and head covering for women in the blue beds and all parts of the works. (8) The provision of shoes and stockings for all women employed, and the enforced wearing of these during working hours. (9) The provision of a dining-room. (10) The provision of a "stand-pipe or "movable hose, furnished with a rose at the end of it, "and with an adequate supply of water for damping "the white bed previous to stripping it." Suggestions were further made, (*a*) that "no white bed should be stripped before it is 'mature.'" (*b*) That the attention of manufacturers should be directed to the danger arising from the immersion of the hands and arms of the workers in the liquid containing lead which is taken from the wash-becks. It is suggested that employers may "either treat this washing water from the first "tank below the rollers in such a manner as to render "it free from acetate of lead in solution, or discontinue "the practice of allowing the workpeople to put their "hands into it." (*c*) The suggestion is made that "the "best form of respirator is one which is in use at some "works, and consists of a cambric bag, with or without "a thin flexible wire, which can be made to fit over the "nose." The Committee remark that they have "heard from many sources that there is often great "difficulty in enforcing the regulations laid down by "the Government and by employers for the safety of "the workers. They trust that the latter will co- "operate with their employers to remedy this in "future." They further add that they "do not think "that the precautionary measures they have felt bound "to recommend, will press so heavily upon employers "as to materially hamper them. But they are agreed "that an industry attended with so much risk to life "and health as the white lead manufacture, the same "precautionary measure must be taken by all classes "of employers as an essential to their continuance."

(1) p. 152.

[§ 737.]

Potteries. (*a.*) *Extent and causes of unhealthy conditions.*

738. (*a.*) The unhealthy processes in the potteries fall mainly under two heads. Those in which the work is carried on in an excessively high temperature and those in which the atmosphere is vitiated by dust generated in course of manufacture. It appeared from the evidence collected by the Lady Sub-Commissioners who investigated the conditions of women's work in the English and Scotch potteries, that the enforcement of a scientific system of ventilation was urgently needed. The grievances chiefly complained of in the Staffordshire potteries appeared to come under the second head. In such processes as "dipping," "glazing," and "towing," it was stated, the lead dust has an injurious effect upon the health of the worker. With reference to towing it was observed that "the dust was supposed "to be taken down a shaft at the back of the hutch, "and forced out by an air-propeller; but this fan was "not working at a sufficiently high speed and there "was hardly any draught." Again, "This factory was "an old and large one, with rooms in unexpected "places, which seemed to render supervision both "difficulty and necessary. The rooms were also very "badly ventilated, although the dust in these factories "or 'banks' is so great as to make ventilation of the "utmost importance." It was noted that the room in which the girls were brushing off the glaze from the ware that had been dipped and dried was "very dark, badly ventilated, and, by the manager's own admission, unnecessarily hot." One witness said that her daughter, aged 15, who worked at the potteries was tempted by the higher wages to become a "ware cleaner." Her work was to brush off the glaze which contains lead dust from the dried ware. She was taken ill with lead poisoning and died within two days. "The employers had been much concerned about the "matter, and had since provided the girls in the glost "room with overall dresses, hoods, and respirators."(1) Another case was mentioned before the Commission, by the agent of the United Firemen's, Dippers' and Placers' Association, of a girl of 17 who died in three days from lead poisoning. He gave strong evidence as to the injurious results on the health of those engaged in processes in which lead dust from the glaze is generated. Young people he asserted were especially susceptible to this disease.(2) An employer in the Staffordshire potteries subsequently denied that women were generally employed in the dipping houses.(3) In Scotland the complaint at the pottery and pipe factories appeared to be rather the extremely high temperature in which the work was carried on, than the injurious effect of the dust. A few cases of potters' disease from this last cause were reported amongst the men, but no case of this illness could be traced amongst the women, though many workers complained of discomfort and a "feeling of chokiness" from the dust in certain departments. With regard to the heat of the workshops it was stated by the Secretary of the men's Potters' Union that a temperature of 90° is frequent and it may even rise to 100°

[§ 738 (a).] or 120° in the summer. The women are not only at work in this temperature but they have to carry moulds weighing from 18 lbs. to 20 lbs. to various departments. Men and women, it was stated, were constantly off duty for days at a time owing to the effects of the heat, and cases of complete prostration were frequent. Workers "in a half-frenzy" had often been seen to break several panes of glass in order to get instant relief. Four women who worked in the pipe factories also complained that in summer the heat was almost unbearable and they were "sair trauchled " and forfochten w'id." It was further noted that in some departments the atmosphere was very cold and damp owing to the quantity of wet clay that was lying about. The older workshops were also insufficiently lighted and the combined cold and gloom had a depressing effect. The rough heavy work in the clay department, such as carrying wet masses of clay or lathe-turning without a treadle was complained of by various women. The intense heat complained of by so many witnesses in this industry appeared to be largely due to defective structural arrangements. Much of the discomfort was caused by the position of the stoves which were placed "too near the workers," who were only separated from them by a narrow passage. They were "frequently placed down the " middle of the workshop between the windows in a " way that does not allow the air to circulate. In " many cases economy of space is the only thing " studied, and the comfort and health of the workers is " entirely disregarded."(1)

(b.) *Recommendations.* (b.) It was strongly urged in Scotland that the legal hours worked in potteries are too long for women workers, considering the nature of the work. The most objectionable feature noted in the Staffordshire potteries was, "the employment of half-timers, " obliged to carry rather heavy trays to and from hot " drying closets in the midst of so much clay dust."(2) Dr. Arlidge, who was quoted as "the best authority on potters diseases," is of opinion that children under 14 should be prohibited from working in the dipping house, dipper's drying room, or at ground laying, or majolica painting. Further, that "girls under 16 " should be prohibited from turning the thrower's " wheel, which is too heavy, and from working the " treadle of turner's lathes, as this constant up and " down motion causes uterine diseases."(3) A male witness from the Staffordshire potteries giving evidence before the Commission advocated the prohibition of the labour of young persons in the work, on account of their special susceptibility to lead poisoning. If this course were not adopted he considered that employers ought to dispense with the use of lead, either altogether or to a large extent. He urged the adoption of an innocous glaze that had been recently brought out. An employer subsequently stated that "commercially, as far as we manufacturers " know, it is impossible, and if we were to use a glaze " without any lead in it, we should produce ware which would not stand."(4) In a report on the subject by Mr. W. D. Cramp, H.M. Superintending Inspector of Factories, the following suggestions are made: (1) "The perfection of the fan system in all towing shops, " and its extension to all shops in which flat-pressers, " hollow ware pressers, turners, ware cleaners, &c., " are employed." Stress is laid on the necessity of the provision of fans "of the best kind, and of the best construction." Those invented by Mr. W. Turner, and in use in his pottery, Alexandra Works, Tunstill, are recommended. (2) A strict and rigid enforcement of section 3 of the Factory Act, 1878, which decrees that factories and workshops "should be ventilated in such " a manner as to render harmless all the vapours, dust, " or other impurities generated that may be injurious " to health." Another point, which in Mr. Cramp's opinion "deserved consideration," was, whether the temperature and humidity of potters' shops could be controlled by some such regulations as those in "Cotton Cloth Factory Act." A draft scheme of proposed "special rules" dealing with the various precautions necessary was drawn up by him, and the last Annual Report of the Chief Inspector of Workshops and Factories states that the whole subject is under consideration, and that the "special rules" finally adopted will probably appear in the next report.(5) A Departmental Committee has recently been appointed to investigate the matter, but its report and recommendations are not yet issued.

[§ 739.] Summary of Report of the Departmental Committee on the Conditions of Labour in Potteries.

739. Since writing the above the report of the Departmental Committee appointed to inquire into "the " injurious conditions of the manufacture of pottery " and the proposed remedies" has been issued, of which the following is a summary. In the report on the medical aspect of the question by Dr. J. T. Arlidge and Mr. W. D. Spanton it is stated that "the ill effects of the trade are referable" chiefly to "dust and the poison of lead" and in a less degree to the operations necessary to the process of "firing" the ware. An analysis of the mortality returns for males above 14 for the year 1890 of the parish of Stoke-on-Trent, which is the "central town of the Potteries," showed that in the case of potters 50 per cent. died of chest diseases and 21 per cent. of pulmonary consumption. Employing the same data, an analysis of the deaths of males above 14 not employed in any branch of pottery labour but living in the same district showed that only 26 per cent. died of chest diseases and 14 per cent. of consumption. Lead poisoning is stated to be on the decrease; "there " are fewer severe cases and these are chiefly confined " to dippers, whilst the slighter ones occur mainly " among young persons." "It is clear . . . . . " that a large part of the mortality from lead poisoning " is avoidable." With reference to the process of "firing" the ware the most unhealthy feature of the work is the great heat to which men are exposed in "drawing the ovens." This produces rheumatic affections for the most part, though the men suffer sometimes from "serious exhaustion from the heat and physical exertions." The evil effects arising from all these unhealthy processes are, it is stated, aggravated by recklessness, carelessness, or negligence of the workers themselves. A draft of proposed "special rules" was submitted to the Committee who adopted them with certain alterations and additions. "As to *new legisla-* " *tion* the Committee deem it desirable that power " should be given to some authority, imperial or local, " to condemn such factories or parts of factories as are " unfit for work. There are potteries which cannot be " made fit for use owing to their bad structural " arrangements or delapidated condition." The Committee did not consider that the proposal that only leadless glazes should be used on earthenware was practicable. They were of opinion that the contention that "fritted" or fused lead was innocuous was at present not proven, but they recommended that further experiments should be made with a view to discovering whether it is possible to make a glaze that is at once innocuous and satisfactory from the manufacturers' point of view. They also desire further information as to the temperature of potters' workshops and of ovens at the time of drawing the ware. Rule 7 they regard as tentative. The Committee further recommend: (a) the provision of mess rooms for the workers who will be prohibited by rules 3 and 11 from having meals in the workrooms, and who live at long distances from their places of work; (b) the periodical examination by the certifying surgeon or other medical man of all workers in processes in which lead is used or poisonous dust is generated; (c) the prohibition of "wedging" of clay by lads under 13 years of age and by girls under 16; "it is very unsuitable labour in all respects for females"; (d) the prohibition of the employment of married women in processes where lead is used. These recommendations are not incorporated in the special rules submitted by the Committee, which are subjoined. The report ends, "if it should be decided to adopt and " enforce the 'special rules' we have recommended, " we hope that the manufacturers and workpeople will " accept them and cheerfully obey them, with a view " of taking away from one of the most beautiful, " interesting, and useful of our manufactures, the " reproach of being one of the most unhealthy." The special rules are as follows:—Duties of occupiers: (1) "They shall not allow any child under 14 to be " employed in the dipping-house or dipper's drying- " room, or in any processes of ware cleaning after the " dipper, glost placing, china scouring, ground laying, " or majolica painting, or in any process in which lead " is used." (2) "They shall provide suitable overalls " and head coverings for all workers employed in the " places and processes referred to in Rule 1, and shall " have the said articles washed on the premises, and " shall also provide a place in which the workers can " deposit clothing put off during working hours." (3) "They shall not allow any persons (either adult males " or others) to cook or partake of any food, or to remain " during meal-times in the dipping-house, dipper's " drying-room, china-scouring room, glost placer's shop, " ground-laying shop, or majolica-painting room."

[§ 739.] (4) "They shall adopt efficient measures in the processes "of towing of earthenware and of the scouring of china "for the removal of all dust and flint by fans or other "mechanical means; and in all dusty processes they "shall adopt measures for dealing with avoidable dust, "and for the prevention of any injurious effects arising "therefrom either by the use of mechanical fans or other "efficient means." (5.) "They shall provide brooms, "brushes, and all other necessaries for the daily sweep- "ing of floors of workshops, and of such stoves as are "entered by the workers, and for the cleansing of work- "benches and of stairs leading to workshops; and shall "arrange that the floors of such workshops and stoves "are sprinkled and swept every working day, and the "scraps and dirt removed, and that work-benches and "stairs are cleansed at least once a week. The daily "sweeping of floors of potters' shops shall be done "after work has ceased for the day, unless there is "some sufficient reason to the contrary." (6.) "They "shall provide washing conveniences with a sufficient "supply of water, soap, nail brushes, and towels for "all workers employed in the places and processes "referred to in Rule I.; and the washing apparatus "shall be in convenient proximity to the work places." (7.) "They shall arrange that the temperature of "potters' workshops outside the drying stoves, when "people are working there, shall not exceed 80° F. if "the outside temperature is below 70° F.; and when "the temperature outside is above 70° F., the inside "temperature shall not be more than 10° higher." (8.) "They shall not allow any female under 16 years "of age to be employed at treading the lathes used by "turners." Duties of person employed: (9.) "Every "person to whom is supplied an overall suit or head "covering shall wear the same when at the special "work for which such are provided." (10.) "Every "person employed in the places or processes enu- "merated in Rule I. shall carefully clean and wash his "or her hands and face before meals, and before "leaving the works." (11.) "Every person employed "in dipping, carrying ware from the dipper, cleaning "ware after it has been dipped, glost placing, china "scouring, ground laying, majolica painting, or in any "process in which lead is used, shall during the meal "times leave the shops in which those processes are "carried on, and shall not cook or eat any food therein "at any time." (12.) "The measures taken by the "employers for the ventilation of the various work- "rooms and stoves and for the removal of dust, shall "not be in any way interfered with by the workpeople "without the knowledge and concurrence of the "employer or manager of the works." (13.) "Every "male or female worker shall be responsible for the "cleansing of that portion of the room in which he or "she is employed, and shall see that the floors of the "shops and of such stoves as are entered by the "workers are sprinkled and swept, and the dust, "scraps, ashes, and dirt removed every day, and that "the work-benches and stairs are cleansed at least "once a week. The sweeping of floors of potters' "shops shall be done after working hours, either by "themselves (*i.e.*, the workers) or by an adult male "employed and paid by them, and approved by the "employer."

Paint and Colour, Enamelling of Iron Plates, and other minor industries.

740. The dangerous effect of the lead used in majolica painting, and in iron enamelling was also mentioned by the Lady Sub-Commissioners.[1] But in both these cases "special rules" have now been issued by the Home Office to meet the evils complained of.[2] In the recent Report of the Departmental Committee on the various lead industries (C. 7239), certain further recommendations are made. With regard to the manufacture of paint and colour, the Committee advocate "certain material additions" to the special rules now in force, *i.e.*, (1) that the use of overall suits should be required "whenever dust is generated"; (2) that proper baths should be provided in addition to the ordinary washing conveniences; (3) that the employment of any male young person or any female in such manufacture should be prohibited. With regard to the enamelling of iron plates the Committee state that they find the special rules now in force to be good as far as they go, though it is too soon to say how far they have acted beneficially. They further recommend: (1) that a medical inspection of all the workers be insisted on at least once a month; (2) that no girl under 20 be employed as a brusher, or in a room or workshop where brushing takes place; (3) that no female should be employed without previous examination, and a certificate from the medical attendant of the works certifying that she is of the required age and a person fit for the employment; and further that no employée who has been absent from work through illness should be re-employed without a medical certificate to the effect that he or she has recovered: such a rule should be incumbent on the employée equally with the employer; (4) that each female worker should be supplied with a half-pint of milk and a buscuit before beginning work; (5) that a fan should be supplied with each perforated bench or table; (6) that a dining-room should be provided with a small ante-room for a cloak-room.[1] [§ 740.]

(1) pp. 53; 62. (2) Chief Factory Inspector's Annual Report for 1892, pp. 23, 26.

Other industries.

Complaints were made in other industries in reference to certain unhealthy processes. This was especially the case with regard to some departments of the sewing machine manufacture in Scotland. In the japanning department the grievances were similar to some of those brought forward in the Scotch potteries. The women have to carry portions of the machines from one place to another which weigh from 13 lbs. to 30 lbs. The temperature in some of the rooms was 80° F. at the time of the Lady Sub-Commissioner's visit, and the foreman owned it sometimes rose as high as 90°. This was attributed to the drying stoves which are heated at night, and extend through the whole length of the workshop. In the French-polishing department one witness had to leave her work on account of the effect of the naphtha and pumice-stone on her lungs. Independent medical testimony confirmed the opinion as to the injurious nature of such materials. Naphtha is also used in the transferring process. In the nickel-plating department some witnesses stated that the pumice, nickel salts, and hydrocloric acid used in the process caused eruptions on the skin, and that the fumes from the vats caused headache. The manager of the works, however, stated that he had never heard of skin eruptions amongst the girls. In the transferring and printing department one of the operatives said that the metallic dust from the gold-leaf had an injurious effect upon the lungs.[2] At Birmingham it was stated that the dust from the polishing by machinery of vegetable ivory buttons, and of boring and grinding pearl buttons, seriously affected the health of the workers.[3] The Secretary of the East London Rope Workers' Union stated that the conditions under which ropemakers work were very often unhealthy on account of the dust and fluff, which caused irritation of the chest and lung affections. There were no special contrivances for ameliorating these conditions. In other cases it was complained that the work was too laborious. "The machines are too heavy for a woman to work, the "amount of work that they are required to do is too "heavy for a woman. Women belonging to our own "Union have this year been, one after another, sent to "the hospital to get treatment for the large swellings "under their arms, caused, according to medical "testimony, by the heavy labour they have had to "perform."[4] In some processes in the confectionery trade a great deal of starch is used, and it was stated that the inhaling of this produced chest complaints in the case of many of the girls employed.[5]

Lucifer match making and necrosis.

741. At the instance of the Chairman of Committee C., an investigation was undertaken in May 1892 by one of the Lady Sub-Commissioners with a view to ascertaining the extent to which necrosis of the jaw is prevalent amongst match workers, the causes of the disease, the precautions taken by employers to prevent its occurrence, and the treatment received by sufferers. A detailed account of the inquiry is to be found in the reports of the Lady Assistant-Commissioner, pp. 23–26, published in November 1893. As since the report was written, but before it was published, the Home Office had issued certain "Special Rules" (under a clause in the Factory and Workshop Act, 1891) regulating the conditions under which lucifer match making might be carried on, no detailed discussion of the question is here necessary. The main points may, however, be thus summarised. The disease from which workers in parts of this industry are liable to suffer is called "necrosis or death of the bone," popularly known as "phossy jaw"—a disease of a peculiarly terrible character. It is occasioned by fumes from "common or yellow phosphorus,"[6] and affects the teeth and jaw,

Nature of the employment and of the disease.

(1) Report of the Departmental Committee on the various lead industries. (C.—7239), 1893. (2) pp. 279, 280. (3) p. 53. (4) Group A., Minutes, Vol. I., Mrs. Hicks, 8191–96; 8222–25. (5) Group C., Minutes, Vol. I., Miss James, 8499. (6) Chief Factory Inspector's Annual Report for 1892, p. 31.

[§ 741.] especially, if not entirely, in those cases where the teeth of the workers were not in a sound condition or where they were in a weak state of health. "Safety" matches apparently contain no phosphorus, therefore the safety matches of Messrs. Bryant and May and of the Salvation Army are quite innocuous. It was pointed out that non-safety wood matches "cannot be made 'bone dry,' as they are then "liable to 'fire' in the process of cutting down, *i.e.*, "of being cut in two. . . . . All makers of "non-safety wood matches are therefore liable to "exposure to a very slight fume, and also to having "a certain amount of phosphorus sticking to their "hands. . . . The wax matches, not having to be "cut in two, are dried harder than the wood matches, "and the danger resulting from want of care in wash-"ing hands and rinsing the mouth before eating is less "great."(1) Great difficulties were experienced in the attempt to arrive at the extent to which necrosis is prevalent amongst match workers, owing to the difficulty experienced in some cases in obtaining reliable information. Messrs. Bell & Co., of Bromley (who next to Messrs. Bryant & May are the largest firm of match makers in England), only employ from 20 to 30 women, and Messrs. Martin, Harriss & Co. only employ 40 women in making non-safety wood matches, and both firms stated that they had never known of a case of necrosis amongst their women workers, and only one each in the last six years amongst their men workers. But subsequent investigations proved that the firms were "ignorant of the facts," and various authentic cases of necrosis amongst both sexes were discovered. The same statement was made with regard to women by Messrs. Palmer & Son, and in this instance it appeared to be quite correct. This was the more surprising, since the girls seemed to work in some respects under peculiarly unhealthy conditions. It was, however, observed that they were "not in any way "exposed to fumes from the drying-room, and in "addition to this they are drawn from a class obviously "superior in habits of neatness and cleanliness to "those to be found in the other wood factories." The utmost facilities were afforded to the Lady Sub-Commissioner by Messrs. Bryant & May in her investigation, with regard both to the conditions under which the work was carried on in their factories, and to the special cases of necrosis that had occurred. The firm furnished her with a list of the names of every person who had been affected by necrosis since 1880. It appeared that the number amounted on an average to three women per annum; 33 having been under treatment during that period. All the cases had occurred in the two non-safety wood match factories, in which 450 women worked; the 700 women employed in the wax vesta and patent safety-match factories had been apparently untouched. Thirteen out of the men and boys who were employed during the same period had suffered from this disease. The witnesses examined gave evidence of the kindness and consideration with which sufferers from necrosis were treated by Messrs. Bryant & May. They were attended by the surgeon whom the firm employed; they received a substantial allowance while they were ill, and they were not allowed to return until they were pronounced cured. Moreover, anyone could have her teeth attended to at any time at the expense of the firm. Little or nothing appeared to be done for the victims to necrosis by the other firms. Criticisms on the defects in the ventilation of the factories of Messrs. Bryant & May and Messrs. Palmer & Son were made by Mr. Tom Mann, who visited both places. At the time of the investigation, however, the former firm were considering the best methods of improving any defects. As the result of the inquiry, the Lady Sub-Commissioner states that "the causes of necrosis among women seem to be: "(1) On the part of the operatives—neglect of the "teeth, carelessness in eating meals without previously "cleansing mouth and hands, and a habit of putting "the fingers in the mouth while at work, combined "with a weak state of health. (2) On the part of the "employers—inadequate ventilation and exposure to "fumes from drying-rooms and dipping-rooms." A strong recommendation was further made as to the use of a gargle in the case of men who are necessarily and constantly exposed to the fumes of phosphorus.(2) H.M. Chief Inspector of Factories states that he recently requested Mr. Redgrave to investigate some cases of necrosis, and adds, "the evidence he has "obtained is such as proves the necessity for adopting "every reasonable means for getting entirely rid of so "fearful a malady."(1) The special rules that were consequently issued by the Home Office with regard to the "manufacture of lucifer matches, except such as are made with red or amorphus phosphorus" are as follows:—(1) "The occupier shall provide, for the pro-"cesses of mixing, dipping, and drying, an apartment or "apartments separate from other portions of the fac-"tory". (2) "Effectual means shall be taken to prevent "the fumes from the before-mentioned processes being "allowed to enter the rest of the factory." (3) "They "shall provide washing conveniences, with a sufficient "supply of hot and cold water, soap, nail brushes, and "towels; and take measures to secure that every "worker wash face and hands before meals, and before "leaving the works. Managers and overlookers shall "report immediately to the occupier any instance "which comes under their notice where this regulation "has been neglected." (4) "Any person employed in "the works complaining of toothache or of swelling of "the jaw, shall at once be examined by a medical man "at the expense of the occupier, and if any symptoms "of necrosis are present, the case shall be immediately "reported to one of H.M. Inspectors of Factories." (5) "No person having suffered from necrosis shall be "permitted to resume work in a lucifer match factory "until a certificate of fitness has been obtained from a "qualified medical practitioner." (6) "No person "shall be permitted to work in the processes of mixing, "dipping, or drying after the extraction of a tooth, "without the certificate of a duly qualified practitioner "that the jaw is healed." It may be noted that while provision is made for the examination of the teeth by a medical man at the expense of the firm, when any complaint of toothache, &c., is made, there is no regulation by which people whose teeth are not in a satisfactory state are prevented from working in this employment in the first instance. Rule 4 is remedial rather than preventive. It is stated in the Chief Inspector's Annual Report for 1892 that "accord-"ing to the report of Mr. White, one of the Assistant "Commissioners of the Children's Employment Com-"mission in Prussia, *no person with decayed teeth* was "allowed to enter the employment of lucifer match "making, and there was a compulsory periodical "inspection of the state of the teeth of all employed."(1)

Extent of the disease.

Treatment received by the sufferers.

Causes of disease.

[§ 741.] *Special rules.*

742. A departmental inquiry into the conditions of work in lucifer match factories and the working of the "special rules" referred to above, has recently been made and the report of the Committee has just been published. (December 1893.) It is stated that they have been unable to trace any cases of necrosis since the special rules were established, beyond the two which have occurred in Messrs. Bryant and May's factory, yet the Committee are of opinion that danger from that disease exists for all workers where white or yellow phosphorus is used. The Committee consider that with certain alterations and additions, referring chiefly to better ventilation and periodical medical examinations, the "special rules" already in force will have a very beneficial effect. The Committee further deprecate the practice of allowing persons to be employed in galleries above departments where fumes may arise, and suggest that some means should be taken whereby in the boxing departments, matches becoming ignited may be rapidly extinguished. The following are the alterations or additions deemed necessary with regard to the special rules. The first the third, the fourth and the fifth are unaltered. The regulations referring to the processes of "mixing" "dipping", and "drying" in the second and sixth rules are also to apply to the process of "boxing." The following new rules as to the "Duties of Occupiers" are submitted: (*a.*) "After the 31st day of "December 1893, it shall not be lawful to carry on "a lucifer match factory, where yellow or white "phosphorus is used, unless such factory is certified "by an inspector to be in conformity" with the revised special rules. (*b.*) "Occupiers shall provide "efficient means, both natural and mechanical, for "thorough ventilation in the mixing, dipping, drying, "and boxing departments." (*c.*) "They shall provide "in the boxing departments efficient means whereby "matches becoming ignited can readily be extinguished. "For this purpose vessels of water, one to every two "workers, or pieces of wet flannel, one for each "worker, are recommended." It was observed that there was some difference of opinion among the Committee as to whether it was advisable that a

(1) p. 23. (2) pp. 23–6.

(1) Chief Factory Inspector's Annual Report for 1892, p. 31.

[§ 742.] register should be kept with the names, addresses, &c., of persons employed in all dangerous departments. This register was desired by the majority, so as to obtain, if possible, outside information as to the prevalence of necrosis. Alternative rules are therefore submitted. (*d.*) "They shall arrange for an examination of the workers at the factory to be made at least once a month by a certifying surgeon, who shall have power to order temporary suspension or total change of work for any person showing symptoms of incipient necrosis. A register in a prescribed form shall be kept in which the certifying surgeon shall enter the dates and results of his visit," or, (*d.*) "They shall cause an examination of the workers at the factory to be made at least once a month by a certifying surgeon who shall have power to order temporary suspension or total change of work for any person showing symptoms of incipients necrosis. The certifying surgeon shall enter the date and result of each visit in the prescribed register, which shall contain the names and addresses of all workers in the mixing, dipping, drying, and boxing departments, with the date of their commencing and leaving employment in that factory." The following rules "as to persons employed" are also submitted: (*e.*) "Every person employed in the mixing, dipping, drying, or boxing departments shall carefully wash his or her hands and face before meals and before leaving the works." (*f.*) "In all cases where the co-operation of the workers is required for carrying out the foregoing rules, and where such co-operation is not given, the workers shall be held liable in accordance with the Factory and Workshop Act, 1891, section 9, which runs as follows:—If any person who is bound to observe any special rules established for any factory or workshop under this Act in contravention of, or fails to comply with any such special rule, he shall be liable on summary conviction to a fine not exceeding two pounds."

Nail and chain and nut and bolt making industry in the "Black Country."

743. Some of the male nail and chain and nut and bolt makers who gave evidence before the Commission, objected strongly to the employment of women in their trade which they contended was both unsuitable in itself and injurious to their health. Not only was it stated that the work had a demoralising effect upon the women in the home, and also, tempted the men to be idle, but, as it was of the nature of "blacksmith's work," it required a physical effort which was liable to lead to serious overstrain. The secretary of the Spike Nail Makers' Association in Worcester specially desired "to call the attention of the Commission to the very hard "labour that females have to do and the injury that it "has upon their system. It is a ruin to a great many "of them."[1] Women usually work in domestic workshops, where they are under no legal limitation with regard to hours. The demand made for the prohibition of the employment of married women and the restriction of the work of other women and girls to the lighter kinds is treated under the head "Inspection and Legislation relating thereto." One of the Lady Sub-Commissioners subsequently spent three days investigating the conditions of women's employment in the nail and chain making district with especial reference to the points raised by the men. Her views on the effect of the employment of married women upon the health and home are dealt with under another head. With regard to the effect of the work upon the health of the women generally, her conclusions are as follows. The opinions of the medical men of the district were found to be extremely divergent. The unmarried women looked in some cases very worn and thin, but no complaints of overwork were received, the cry was rather on all hands that there was not enough to do. The "local people" who were consulted agreed that the only danger to health was in working the "oliver," *i.e.*, treadle, to cut cold iron and in heading big nails and making big rivets. Poor food and constitutional weakness rather than the heavy nature of the work were stated to account for the worst cases of unhealthy appearance that were observed. No corroborative evidence was found of the men's representation that excessive hours were worked in factories, or by the women and children in domestic workshops, nor of the statement that violence was used to compel the wife to work, though their contention with regard to the disastrous effects on young children and the home life generally were amply proved. The extreme unsuitableness of the dress worn by the women while at work was also commented on.[2]

[§ 744 (*a.*)] Accidents. (*a.*) *Causes of accidents.*

744. (*a.*) The most numerous class of accidents in the industries which women are employed are those caused by flying shuttles in the weaving departments of the woollen, cotton, jute, and linen trades. These are sometimes slight, but frequently result in loss of sight and occasionally even in death. A weaver at Bradford is mentioned by one of the Lady Sub-Commissioners, who died within 24 hours of a blow upon the head from a shuttle. Owing to the greater speed of the looms in Yorkshire and Lancashire accidents of this nature are stated to be more frequent there than in the textile districts of the West of England and Scotland.[1] In the linen trade of Ireland also, though occasional cases of loss of sight are reported, accidents from this cause are infrequent owing to the use of guards. Several serious accidents have occurred in the jute trade of London. Among them is the case of a girl decapitated by a "flying strand." The Secretary of the East London Rope Workers' Union stated before the Commission that another girl who was struck by a bolt from a machine and fell down fainting, was left lying where she fell for over an hour. At the end of that time a doctor was sent for, but when he arrived the girl was dead.[2] The belts that work the machines in this trade are also stated to be liable to come down and cut the heads of the girls working below.

Accidents caused by cleaning machinery while in motion are reported from Yorkshire by male weavers before the Commission, and by witnesses examined in Scotland.[3] This practice is illegal and in most of the mills visited by the Lady Sub-Commissioner there is a notice posted up prohibiting it, but the women complain that they are practically obliged to do it as the time allowed on Saturdays is not sufficient to keep the machines in proper order. Small accidents due to this cause are constantly occurring, and one girl was mentioned who lost her hand by it. A similar kind of accident occurs sometimes in the process of willeying, which is sometimes performed by women. The willey, which is filled with spikes, is revolving while they are taking the wool out of it, and their hands are thus liable to be caught. The Leeds Willeyers' and Fettlers' Union has passed a resolution disapproving of the employment of women for this operation on account of its dangerous character.[4] In the pen trade of Birmingham a large number of accidents, usually the loss of a finger, are caused by steam stamps and presses. These are stated to be nearly always due to the carelessness of the workers.[5] This is also the case with some accidents that have occurred in a London laundry, but the Lady Sub-Commissioner adds that "there seems no reason why "the laundry proprietors should not be under the same "obligations to report them as are imposed on "employers who are under the Factory Acts."[6] Accidents at Birmingham are also sometimes caused by the flying of emery wheels. One fatal one is ascribed to this cause.[7] In the mineral water trade accidents occur frequently from the bursting of bottles while being "sighted" or put into baskets.[8] These are apt to cause large gashes in the face, and sometimes injury to the eyes from splinters of glass getting into them. Two girls in London, indeed, had each lost an eye at this work, and another had lost the use of one arm owing to the severe cuts she had received. The general effect of the accidents in this trade is, however, rather to disfigure than to incapacitate the workers. The Factory Act does not make it necessary to report an accident unless of such a nature as to prevent the person injured by it from returning to her work in the factory or workshop, and doing five hours work on any day during the next three days after its occurrence. These accidents, therefore, are frequently not reported, though "by them a woman may be disfigured for life." In the confectionery trade accidents are sometimes caused by the girls slipping while carrying heavy trays of boiling jam downstairs.[9]

(*b.*) *Question of prevention of accidents.*

(*b.*) The question arises, how far these accidents are preventible, and how far due to the inevitable conditions of the work performed. With regard to those due to flying shuttles, it appears from the evidence with regard to Scotland and Ireland that two things tend to make accidents specially frequent in Yorkshire and Lancashire—the speed at which the looms are worked, and the absence of shuttle-guards. The question of reducing the speed was not raised at all, but several opinions were offered as to the use of guards. Those most

[§ 744 (b.)] generally in use are the "wing" and "bar" guards The wing guard is a net placed at the ends of the loom and protects from the commonest form of accident, *i.e.*, injury from another weaver's shuttle. It is stated that the wing guard to be effective should extend to meet the greatest angle at which the shuttle can fly, and if the loom be placed between others it should be guarded at each end. It is, however, no protection to the weaver from her own shuttle. The bar guard extends along the course of the shuttle keeping it in its place.(1) Some employers deny that there is any need for guards, or that they would be any use if adopted. Others recognise the need, but complain that those at present in use are so imperfect that it is not worth while to adopt them.(2) On the other hand several witnesses before the Commission from Yorkshire and Lancashire were of opinion that all fast looms, at any rate, should be fitted with guards(3); and in two firms visited by one of the Lady Sub-Commissioners the employers stated that they were perfectly satisfied with those they had adopted. The patent in use at one of these mills was "Marriots" of Manchester which costs from 2*s.* to 2*s.* 9*d.* per loom. At the other the patent known as "Hahlo Liebreich" of Bradford was used. The cost of this is about 10*s.* 6*d.* per loom.(4) H. M. Chief Inspector of Factories and Workshops moreover writes in his report for the year 1891–2, "In the course of my visits I have met with a "very cheap, movcable, simple, and efficient shuttle-"guard which requires little trouble to fix and keep in "order, and can be used safely with the steel roller-"temples which render the stiff or fixed bar guards "dangerous. It can be fixed for a cost of about 2*s.* "and is the invention of Mr. Timothy Yates, 33, "Victoria Street, London Road, Preston, who is in the "employ of Messrs. Swainson and Birley, Fishwick "Mills, Preston, where it is used as well as at other "factories in the town." Some employers, again, allege that guards of any sort are disliked by the operatives, who find that they impede their work.(5) This was contradicted both by a witness before the Commission, representing the West Riding of Yorkshire Weavers' Association, and by witnesses examined by one of the Lady Sub-Commissioners in Lancashire.(6) Here it was stated that the women had at first objected to the use of guards, but had soon got over their prejudice. Where, however, such objections do exist they may possibly be accounted for by the fact that as in some mills in the West of England the weavers are made to pay for the appliances introduced.(7) The conclusion seems inevitable that where guards are in use the injuries from flying shuttles are less frequent and less severe; and their adoption is, therefore, strongly recommended by the authorities of the Bradford Eye Hospital.(8) With regard to the practice of cleaning machinery while in motion, one of the Lady Sub-Commissioners states that she has questioned numerous employers on the subject and has "always met with strong expressions of dis-"approbation, and, in the majority of cases, of entire "ignorance regarding it."(9) It would seem, therefore, that accidents from this cause might be prevented if sufficient time were allowed for cleaning the machines when not in motion, and if the operatives were strictly forbidden to clean them at any other time. The "flying" of emery wheels appears to be exclusively due to the excessive speed at which they are run. One of H.M. Inspectors, Mr. S. H. Knyvett, suggests, therefore, that great care should be exercised in ascertaining the speed at which individual wheels might be safely run. He recommends that "it should be requisite for "manufacturers to have and to produce for inspection "a register or paper setting forth the speeds up to "which the wheels they use are guaranteed as being "safe by the makers," and further that "the inspector "should be supplied with an instrument to test the "speed at the time of his visit."(10) It would appear that accidents in mineral water works may be lessened by the use of wire masks and spectacles; but it is stated that these are very reluctantly worn by the girls. In one factory thick woollen arm-protectors were given out to the workers, but within a week all but one had been taken away to use as floor-cloths. In another factory, however, in South London, the girls were compelled, on pain of dismissal, to wear both these armlets and masks.(11) Whether these accidents can be altogether prevented seems doubtful. A witness told one of the Lady Sub-Commissioners that they were really due to carelessness on the part of the girls in knocking the [§ 744 (b.)] bottles together; but as the Lady Sub-Commissioner adds, "any ordinary girl holding up bottles for 10 hours "would be sure to let them knock together."(1) A witness before the Commission, indeed, stated that in one room in a London factory they "expect" six accidents of this kind a day.(2) In connexion with the accidents met with by girls obliged to carry heavy trays of jam, it was noted that an excellent plan is in practice at Aintree. The floors are interlaced with tram lines, along which small trucks with trays of jam-pots are rolled to and from the shelves. The trays for the pots are small, constructed to hold nine 2-lb. jars, and the girls only have to put those trays into the trucks and then take them off and put them on to the shelves in the cooling-room.(3)

(c.) Employers' Liability Act.

(*c.*) Several complaints were made by witnesses with regard to compensation for accidents under the Employers' Liability Act. The secretary of the East London Rope Workers' Union, Mrs. Hicks, quoted the case of a woman in a jute factory whose arm was caught in a machine adjoining her own, and fractured in two places. It was asserted that the employer in this case knew the machines were too close, as they had been moved since the visit of the inspector. She went to the hospital, and when she came out and asked for her wages was told that they had been stopped. She then asked for work in the mill, and was given such odd jobs as she could do with one arm, earning about 3*s.* a week. This lasted for several weeks, till erysipelas set in and she had to give up work. "The employer," said Mrs. Hicks, "had kept the woman idling about "in the place thinking she was going to be compen-"sated," but on her application for compensation under the Act she was told that the time had passed at which she could apply. Mrs. Hicks recommended, therefore, that the time during which applications might be made should be extended to a more lengthy period. She considered further that "the employers "should be liable for the injuries to their employées "when the accident happens through no fault of the "girls themselves." The undoubted obligation of employers to compensate in such cases is evaded, she explained, by the device of sending them to the office of the Employers' Liability Assurance Society. Here, while still weak from the effects of the injury, they are cross-examined, "and in nine cases out of ten they are "got to admit that if they had been a little more "careful the accident would not have happened."(4) They are then told it is their own fault and that there is no compensation. Another grievance is connected with sub-section 1 of section 1, which provides compensation for injury caused by a "defective" machine. If a machine is perfect of its kind, *i.e.*, if it is as originally made by the manufacturer, however dangerous it may be, it is not "defective" as the word is used in this section. The consequence is, that even unnecessarily dangerous machinery may be used, and "if a girl loses her life and the machine is "perfect, there is no recompense."(5) There appears to be a strong repugnance on the part of the women workers to bring an action against an employer under this Act. Mr. Williamson of Dundee complains that "the difficulty is to get these women to appear; they "will not appear before the sheriff on their own behalf. "They are as much afraid of being in the court as "plaintiff as they are of being there as defendant."(6) Mrs. Hicks also states that their Union has only taken up one case, as frequently the women go to work rather than lose their time or their employment.(7) The case of a girl who had lost half her hand and had previously been induced to admit that the accident might have been her own fault, was, however, taken up by her friends, and 30*l.* compensation was obtained. On the other hand, the parents of the girl mentioned above, who was decapitated, and in whose case no action was brought, received only 10*l.*(8)

B. UNHEALTHY CONDITIONS IN ORDINARY EMPLOYMENTS.

Lack of provision for ordinary comfort of workers.

(a.) In factories and workshops.

745. (*a.*) A grievance brought forward in some parts of the textile industries is the absence of any cloak-rooms where the clothes of the operatives can be dried if they are wet on arrival, or placed during work

[§ 745 (a.)] hours to prevent their getting damp by the process in which they are engaged. Thus it was stated that the clothes of the weavers in Lancashire usually hung in the damp weaving sheds on the walls, which were damp if not wet owing to the high temperature necessary for the "steaming" process.(1) In the centre of the jute and linen industry in North Scotland the workers complained that much discomfort frequently arose in mills owing to the absence of accommodation where workers could hang their wraps and outer garments. The witnesses in question stated that in the majority of cases the workers have to leave their shawls, &c., lying about in corners in the flats where they work. In wet weather special discomfort and risk to health is incurred, as the clothes which have been taken off wet have to be put on in the same condition, and the workers, fatigued and frequently overheated from their work, are very liable to suffer from cold, &c.(2) In reference to the point the Rev. Henry Williamson, who represented the Dundee and District Factory Operatives' Union, said that he thought it was "obvious that some "provision should be made in the mills and factories for "women hanging up their outside garments."(3) H.M. Inspector, Mr. Osborn, who superintends the cotton cloth factories, refers in the report for 1892 to a recommendation he had made as far back as 1883 that the outer clothing of the weavers should be hung outside the weaving shed, in order to be free from dust and moisture during the hours of work. He further states: "I am more satisfied than ever that the absence "of drying closets or cloak-rooms is a serious defect of "mills and schools, as frequently workers and children "get soaked on their way to work and school, and have "to resume their cold wet clothing to return home, a "most fertile source of neuralgia, rheumatism and "chronic colds, and provocative of phthisis and other "lung affections." Messrs. Greenwood, of Infirmary Mills, Blackburn, have, he states, for several years had a cloak-room heated with steam pipes to meet this want; and it has been used and valued by their people. "Each person has his own hook for clothes, and the "arrangement answers well," said Dr. Barwiss in reference to this mill. Two other employers in the same town have been recently induced to contrive and fit up similar cloak-rooms for their weavers, who now find their shawls and outer clothes dry and warm when they leave work. "It is to be hoped," adds Mr. Osborn, "that this example will spread. Elaborate "arrangements are not necessary; and the experience "of large drying rooms shows that a steam coil at one "end and a fan to draw the hot air through, will dry "clothes far more rapidly than a range of steam pipes; "so that where space is small, the garments could be "dried in batches during the time of work; or, in some "circumstances, the heat over the boilers might be "drawn through a filtering screen of cotton wool and "be made available for the purpose."(4) On the other hand, a representative of the Employers' Association in the Lancashire cotton trade did not appear to think that cloak-rooms were necessary, and doubted whether the operatives would use them if provided. Moreover, "in few sheds is there room for anything of the sort." He suggested that a "suitable bag" in which to hang the clothes on the wall would be quite sufficient.(5) In other places the demand is merely for some place in which to hang the outer garments, without any drying apparatus. The absence of any provision for meals and dressing was noticed in the Welsh iron, tinplate, tin stamping, enamel, and slate works, and in the collieries and brickyards. "At some large brickyards in Wales, "where the foreman gave the girls an excellent "character, there is no dressing-room, and the girls "roll their skirts up round their waists, working in a "short petticoat, and let them down again for the walk "home. Their comfort would be increased and the de-"sire to present a decent appearance would be encour-"aged if a shed were provided where they might take off "and hang up their outer garments. The same shed "might be used as a dining-room for those who do "not go home for meals."(6) Various instances of model factories were given by all the Lady Sub-Commissioners, where, amongst other provisions for the comfort of the women workers, admirable cloak-rooms were found. In the Bristol and the Bourneville cocoa and chocolate works, it was noted that the girls keep a dress at the factory in which to do their work. "Every girl "changes her dress before going home, with the "result that both outside and inside the factory she "is neater and better dressed than the girls in any "other factory, as even her factory dress looks well as "it is never damp or muddy from being worn out-of-"doors." In the Bourneville works near Birmingham "the girls change their boots if damp, and place them "on racks in the cloak-rooms above hot-water pipes."(1) In the same way the absence of dining-room and provision for getting hot water, &c., was often complained of by workers in factories. Where the women come from a distance, or where the time allowed is too short for them to go home for dinner, great discomfort is caused by the absence of any dining-rooms or any facilities for warming the food or tea they may have brought with them. As by the Factory Acts they are not allowed "to remain in a room in which a manufacturing process or handicraft" is carried on during meal hours, in many cases their only resource is the streets. At a hosiery factory a strong desire was expressed by the witnesses to have a dining-room. They stated that as they are not allowed to remain indoors for their meals, and as many of them come from a distance, they are obliged to buy food every day, which they state is more expensive than bringing their own food. At another hosiery factory the workpeople cannot obtain hot water to make tea. They bring their tea in bottles at dinner-time and endeavour to keep it warm till tea-time by covering it with their work.(2) "As the result of my inquiries," says one of the Lady Sub-Commissioners, "I find that a matter deserving "the attention of employers is the desirability of pro-"viding accommodation for women workers during "meal hours. For this, she says, there is 'urgent "need' in the factories for pottery and pipe manu-"facture at Glasgow. The nature of the work induces "overheating, and exposes the women to great risk "from cold in lounging about the gate and outside "passages as many of them do. Many women," she observed, "squatted on the floor in some of the work-"shops amidst general dirt and disorder. Frequently "too, they hang about with the men workers during "meal hours, and much rough talk, I am informed, "goes on. This point was strongly urged on my "attention by several old and experienced workers of "both sexes."(3) The same grievance is brought forward in the textile industry of Yorkshire and Lancashire. "As a matter affecting their health many "women complain of the absence of any provision by "which they can get comfortable meals. In the majority "of cases in Yorkshire they are obliged to drink cold tea "for breakfast, made overnight, and brought to the "mill in tin cans. As a rule they cannot warm their "dinner." In Lancashire "hot water is very generally "provided, but in only a small number of cases can "food be cooked." Of the mills then visited, three had dining-rooms and one had a restaurant attached. At one mill in Dewsbury in Yorkshire hot water and milk were provided free of charge, and attendants were kept who made tea, coffee, or cocoa for the women. Again, at a carpet mill at Halifax, a restaurant and dining-room was supplied, at which the workers obtain food at the usual prices or else have their own food heated for them if they prefer it.(4) Various instances are given by the Lady Sub-Commissioners of the ample provision that certain employers in different industries have made for the comfort of their women workers in this respect. In the case of the Bourneville Cocoa and Chocolate Works an interesting "Dining Room Tariff" is given. The dining-room is fitted with seats, with backs reversible into tables, and the room is frequently used as a lecture hall. Formerly hot joints were provided from the kitchen, but this practice was abandoned because "all the girls wanted the best cut." If the girls want hot meat they can bring it and have it cooked for them, and cold meat and different kinds of pies and puddings are sold to them at the following prices:(5) Ham, corned beef or tongue, 1*d.* and 2*d.* per plate. Eggs, each 1*d.* Sausages, each 1*d.* Pork pies, per quarter, 1½*d.* Bacon, per rasher, 1*d.* Potatoes, ½*d.* and 1*d.* Pudding, pies, and tarts, 1*d.* Butter, cheese, or jam, ½*d.* Bread, per slice, ½*d.* Buns, each ½*d.* and 1*d.* Cake, per slice ½*d.* and 1*d.* Tea and coffee, per ¾ pint, ½*d.* Cocoa essence, per ½ pint, ½*d.* Milk, per ¾ pint, 1*d.* Milk, per glass, ½*d.* Ginger beer, lemonade, or soda water, per bottle, 1*d.* Fruits of all kinds in season.

Absence of cloak-rooms.

Absence of dining-rooms and hot water.

(*b.*) A witness before the Commission, commenting on the unhealthiness of the actual employment of shop assistants and barmaids, attributes it in part "to the 'living-in' system, the arrangement of

[§ 745 (b.)] "meals, sleeping accommodation, &c." (1) It is evident that this system is not necessarily injurious to health, as there are numerous instances of establishments where the welfare of the assistants is carefully and successfully studied. But it is undoubtedly liable to abuse, and the evidence of the Lady Sub-Commissioners shows that where this is the case the results as to health are most serious. The system renders shop assistants and barmaids in a special degree dependent on their employers for provision for their comfort, and the question of accommodation thus becomes in their case one of peculiar importance. A very unsatisfactory state of things in this respect was found by the Lady Sub-Commissioners to exist in many places, especially among shop assistants. Frequent complaints were made as to the quality and quantity of the food supplied, and of the short time allowed for meals. In some shops the food is stated to be insufficient, in others it is badly cooked and served, in many cases, again, the monotony of the diet and the want of any fruit or green vegetables are complained of.(2) The time allowed is usually very short, and is, moreover, liable to interruption. The girls, therefore, "acquire a habit of bolting their food in a remarkably short time."(3) One of the Lady Sub-Commissioners points out that where an assistant lives in "there is no "solid meal in the evening to compensate for a light "lunch, and those who try to eat a good dinner in the "very short time allowed are liable to indigestion."(4) Under this system, again, the intervals between meals are sometimes so long as to directly injure the health of the assistants. An extreme case of this occurred in Scotland. A girl, for whom no food was provided in the shop, could only go out for meals, when her employer, a commercial traveller, was at home to relieve her. She frequently had to fast all day, and was finally obliged to leave on account of her health breaking down.(5) In other cases, these long intervals without food foster a habit of taking stimulants, or of eating unwholesome food, such as sweetstuff and pastry.(6) One of the Lady Sub-Commissioners concludes with regard to this point, that "a meal of "nourishing food served punctually before the bar-"maids are tired with the stress of the day's work is "the best preventive of the habit of taking irregular "stimulants."(7) This plan, it may be noted, has been adopted in the Aërated Bread Company's depôts, and has been found to work admirably and with excellent results as to health. Other abuses peculiar to the living-in system occur in connexion with the sleeping accommodation and provision for the comfort of the assistants during their leisure hours. In this respect again, conditions vary very much from shop to shop. Barmaids in many cases share the family life of their employers; and shop assistants frequently have large and well-furnished rooms which they are allowed to make home-like and comfortable. In many instances, however, the space and provision for comfort are alike inadequate.(8) This is particularly noticeable in England and Scotland, and in those establishments in Wales which are under house-keepers. In Ireland, though a few cases of extreme discomfort are met with, the shops in general compare favourably as to air, light, warmth, &c., with those in other parts of the kingdom.(9) Mr. Shortt, a barrister-at-law giving evidence before the Commission, stated with regard to barmaids that they are "generally dissatisfied with "the accommodation and food provided for them and "with the general surroundings of the life." The same witness asserted further that the arrangements of the bedrooms, &c., are "often worse than unhealthy, "rather deadly," and the sanitary conditions "posi-"tively disgraceful."(10) These strong statements are hardly borne out by the evidence of the Lady Sub-Commissioner who investigated the conditions of employment among barmaids, though frequent instances of discomfort and of unsatisfactory accommodation were quoted. Among shop assistants, on the other hand, they can be to a large extent justified by the reports. Evidence was given of overcrowding, *e.g.*, six girls were sleeping, two in a bed, in one small room. One of these girls fell ill, and the doctor who attended her attributed her illness to foul air.(11) The coldness, bad ventilation, and general discomfort of the rooms are subjects of very frequent complaint. A shop is mentioned in Wales where no sitting-room was provided, except the milliners' workroom, the bedrooms were wretched, and though there was no bath-room only one small jug of hot water was allowed in a week. A girl in this establishment was stated to be leaving her situation in fear of permanent ill-health.(1) In view of these considerations several witnesses examined by the Lady Sub-Commissioners urged the desirability of sanitary inspection of sleeping and living accommodation provided for shop assistants.(2) The general secretary of the Scottish Shopkeepers' and Assistants' Union in particular held that this ought to be provided for by the Shop Hours Act, and further that women inspectors should be appointed for certain classes of shops.(3) One of the Lady Sub-Commissioners points out, however, that the difficulties of such inspection would be very great, owing to the impossibility of fixing any standard of comfort and cleanliness. Conditions which are quite bad enough to produce serious effects upon the health of the assistants would sometimes hardly warrant legislative interference.(4)

Food.

Living accommodation.

[§ 745 (b.)]

Need of inspection.

746. (*a.*) There is no lack of evidence to show that the hours worked by both shop assistants and barmaids are so long as to be exceedingly trying to the health. Numerous instances were given of shops in London and the provinces where the hours ranged from 70 to 74; in Scotland 65 was said by a witness before the Commission to be the minimum; Wales was found by the Lady Sub-Commissioners to be the most satisfactory district in this respect, the hours in the cases investigated varying between 51½ and 62½.(5) It is pointed out by one of them that the hours of shop assistants compare unfavourably with those permitted in industries protected by the Factory Acts, where the limits are 56½ or 60 hours; and she adds that "the idea "that a shop assistant's work is less arduous than that "of persons in factories seems to be erroneous."(6) The hours of barmaids and waitresses vary very considerably, running as low as 46½ in a few cases, and as high as 102 in Scotland and 105 in England in others.(7) One witness examined before the Commission was of opinion that it would be "a good public-house where the women only worked 100 hours" in the week, while another characterised the ordinary hours of barmaids as "enormous."(8) It may be noted that the Shop Hours Regulation Act only limits the hours of labour of children and young persons. A demand is made in some quarters that the hours of adult shop assistants and barmaids should be also regulated; this subject is treated later on. A large amount of medical testimony to the evil effects on the health of women, and especially of young and undeveloped girls, was handed in to the Commission or elicited by the Lady Sub-Commissioners. This evidence speaks in strong terms of the injury done, and mentions numerous complaints as the outcome of the close confinement and the strain of long hours worked under unfavourable conditions. Dr. Service of Glasgow writes, "Prolonged standing, long hours, and want of proper "sanitary accommodation lead to ailments affecting "the bladder, bowels, uterus, nervous, vascular (blood) "and muscular systems. . . . The nervous system is "seriously injured by the undue strain that is put "upon all the organs of the body. Facial neuralgia, "spinal neuralgia, and headache are very common "complaints. . . . Lung troubles are frequently seen. ". . . Anæmia will be found in the majority of shop "women." He adds further that "if we look at the "children of women who have worked under the con-"ditions mentioned the evil effects are, if anything, "more pronounced."(9) Dr. Yellowlees, of the Gartnavel Asylum considers that the mental disorders observed in shop girls are chiefly traceable to bodily weakness and poverty of blood, caused by confinement and long hours. In a list of cases among barmaids and waitresses given by a Sister in a London Hospital as treated during four years, anæmia takes a prominent place.(10) The Lady Sub-Commissioners' investigations amply corroborated these statements. Headache, indigestion, varicose veins, and swollen feet from the continuous standing, or, more generally, "bad health," are the records of case after case. One witness, whose evidence was regarded as "trustworthy" by the Lady Sub-Commissioner who quotes it, had served in 16 shops in London, and gave as the result in no less than 10 out of the 16 cases "prostration," or "complete prostration;" in the other six the

[§ 746 (a.)] effects were only some degrees less injurious.(1) A shop assistant who denied having suffered herself, and asserted that in her situation she had found many things to compensate for the long hours, admitted that delicate girls found them trying.(2) At a shop in the provinces it was stated that in summer there was "scarcely a day that one girl or other was not ill;" they got so worn out in the rush that they were "much "too tired to be able to enjoy their Sunday holiday, "or to do anything but lie in bed in the morning." In another shop where they worked 13 hours on four days, 14½ on one day, and 6 on another a girl had recently died of decline, brought on by overwork.(3) It was stated that in Wales the long-continued stress on Saturday is responsible for many of the cases of breaking down.(4) And though, says one of the Lady Sub-Commissioners, "of the more serious consequences "which show themselves later on, it is impossible to "obtain direct evidence, because, when seriously ill, the "shop assistants return to their homes, which are, in "many cases, in small country districts," yet "of the "immediate effects, such as headache, backache, and "other results of indigestion every witness gave "evidence."(5) The long-continued standing was brought forward on almost all sides as one of the worst circumstances connected with the occupations of barmaids and shop assistants. The Lady Sub-Commissioner who investigated the conditions of work of barmaids states, however, that she had seen counter seats "in most public-houses and restaurants"; she was of opinion that "in an occupation necessitating "such long hours it is particularly important that seats "should be supplied to be used whenever work is slack." But the provision of seats is not the only thing necessary, for instances are mentioned in the evidence where "seats are allowed, but the girls are too busy to use them," or "seats allowed, but manager does not like the girls to use them." It is, moreover, remarked that "a "girl may be far more tired by being in a bar for many "hours, even if there are seats in it, than by standing "for a few hours with the prospect of complete rest at "a fixed time." Such a complete rest (generally one to two hours in the afternoon) is given in many places where the staff kept is large enough to admit of relays; in some cases the barmaids go to bed for a time.(6) With regard to shop assistants, one of the Lady Sub-Commissioners notes that, "In many cases there is a "terrible strain involved on the women owing to their "being kept standing all the hours they are engaged "in the shop, and there is abundant evidence to prove "that most serious results to health have been brought "about by this."(7) Seats are seldom provided; they were only found in four out of the 33 London shops of which information was obtained, and in three out of 63 in the provinces.(8) In Scotland the workers questioned were without exception in favour of their compulsory provision, though they regarded the retiring room suggested by Mr. Pollock, secretary of the Scottish Shopkeepers' and Assistants' Union, as impracticable. The great practical difficulty in the way of supplying sitting accommodation is in most cases the want of space; the absence of seats, however, is equally noticeable where this difficulty does not exist.(9) It may be remarked that in Wales the shop assistants did not desire seats behind the counters, though they approved of them in show-rooms and places where girls can rest for five minutes when at leisure; they were unanimously of opinion that "short hours are far more needed than seats."(10) It is when the peculiarly trying nature of the work is borne in mind that the importance of the question of shorter hours is most clearly seen. This consideration is summarised by one of the Lady Assistant Commissioners as follows: "The constant "supervision of the shopwalker, the patience and "politeness to be shown to the most trying customers, "the difficulty of telling the truth about the goods "without incurring the displeasure of the managers, "the long standing, the close atmosphere, even in the "well-ventilated shops when crowded with customers, "the short time for meals, the care required to keep "things in their right places, and to make out accounts "correctly, the long evenings with gaslight, and the "liability to dismissal without warning or explained "reason, all tend to render the occupation of the shop "assistants most trying to the nerves and injurious to "health."(11)

Seats.

(b.) Laundresses.

(b.) The Lady Sub-Commissioner who investigated the conditions of labour in laundries in Acton and London found that "by the employers' own admission, very long hours are worked." As already shown in section 2 (Hours), though in most cases the total hours per week did not exceed the limit allowed by the Factory Acts (*i.e.*, 60), yet in consequence of the way in which the work was distributed, the daily average was usually above that legal limit. The fatiguing nature of the work, the extreme heat, and the defective sanitation so often found, render such long hours peculiarly trying to the health, and various complaints on this score were brought forward.(1) But the recent report which has been issued by the Council of the "Women's Protective and Provident League at Glasgow" on this subject, shows that with regard to hours the conditions of women's work in laundries are considerably worse in Scotland than in the London district in England. In very few of the 50 laundries in Glasgow, Edinburgh, Dundee, Aberdeen, and Paisley, about which evidence was taken, was the weekly total of hours as low as 60, while in many it was 70, and in one case "89 to 92 hours," with "no regular time for meals." Though the practice of working six days in the week appeared to be more common than in England, the unequal distribution of the work involves in some cases "the excessive strain "of working 15, 16, or 17 hours in one or several days "in the week, and in exceptional cases 19, 24, and 37½ "hours at a stretch." Bitter complaints were made by many laundresses. They stated that they work till they are "fit to drop," "past eating or thinking," "till far on into Sunday morning regular." "Laundry work is slavery, only hard work early and late," "it was killing lots of them," "the long hours on certain days of the week a great strain." One witness, a girl of 18 years of age, who is paid a set wage of 6*s.* a week, stated that on a recent occasion she and other women worked from 8 a.m. on Friday till 9.30 p.m. on the following Saturday (37½ hours), the only intervals being an hour for breakfast, an hour for dinner, and a little time to take some tea. For this full-night shift she was only paid 1*s.* extra. Her mother said that she came home in a state of complete exhaustion, and was unable to rise from her bed the next day. Two laundresses who gave evidence stated that they worked 79 to 80 hours a week, not counting broken time after 10 p.m., with no regular time for meals. They were "paid a set "wage of 12*s.* and 13*s.* per week respectively; they get "nothing for their overtime, but 'must just work until "the work is done.' . . . 'The hours are murderous "as it is.'" Both of these women burst into tears when telling their story, and said they had thought something was to be done for the laundries a while ago, but they had "given up hoping now." Complaints were made on the part of the employers as to irregularity and intemperance amongst workers, which was attributed in some cases to the trying nature of the work and the long hours.(2) Evidence was given, both in England and Scotland, as to the especially injurious effects of these excessive hours upon the health of the "young person." In the steam laundries in the London district it was pointed out that children and young persons are usually working at the calenders, which is "the hottest part of the place." "In the hand laun-"dries the proportion of young persons who can be so "employed is much less. Children who have neither "the skill nor the strength to do hand work can be set "at once to put plain things between the rollers of the "machines, and to take them out on the other side. "They stand the whole day in this great heat for hours, "which the laundry managers themselves say are longer "than those allowed to adult women by the Factory "Acts."(3) A witness in Scotland stated that many young girls of 12 and 13 years of age were employed in laundries for the same hours as the adult workers. Her own daughter, a girl of 12, had suffered so seriously in health that she had to be removed from the work before the year was out. Another witness was the "message girl" in a laundry where 80 hours a week were worked. "She was 13 years of age, and some-"times worked later than the adult workers, as she "had to carry home the work they finished." She was described as "puny and sickly-looking," but "bright and intelligent."

[§ 746 (b.)]

(c.) Dressmakers and milliners.

(c.) The grievance of excessive hours worked by dressmakers, milliners, and other makers of articles of wearing apparel come chiefly under the head of overtime. Apart from this, however, the hours, considering the nature of the occupations and the unsanitary conditions already described, are extremely long, especially

(1) pp. 8, 9. (2) p. 7. (3) p. 85. (4) p. 235. (5) p. 89. (6) pp. 205–6, 217, 219. (7) p. 288. (8) pp. 4, 87. (9) p. 287. (10) p. 236. (11) pp. 88–9.

(1) pp. 17–23. (2) Report of an inquiry conducted for the Council of the Women's Protective and Provident League of Glasgow by Margaret H. Irwin. (3) p. 18.

[§746 (c).] in the case of the "young person." It must be remembered that the "young person" is anyone under 18 years of age; she may be, and often is, a child of 13 or 14, who has passed the 5th standard. "While *men*," says Mr. Cramp, one of H.M. Superintending Inspectors, "who work about nine hours a day, are agitating for "an eight hours' day, they allow their wives, sisters, "and daughters to work 12 hours, less 1½ for meals, "and for two months in the year for 14 hours, less 2 "hours for meals."(1) These are the hours which it is permissible to work in a non-textile factory or a workshop, which include dressmakers' and milliners' establishments and places in which articles of wearing apparel are made. Unfortunately, long as the normal hours are, the permission to work overtime for two months in the year is usually taken advantage of to the fullest extent, and it appeared to be the opinion of H.M. Inspectors that a great deal of illegal overtime also is worked. Very strong representations are made by them as to the injurious effect of this upon the health of the women and girls, more especially upon the "young person." It was pointed out by Mr. Bignold, H.M. Inspector for Devonshire and Cornwall, who gave evidence before the Commission, that as the law now stood "young girls between 13 and 18 are allowed to "work until 10 o'clock at night." "Much of the "good," says Mr. Cramp, "done by the Factory Act is "undone by allowing delicate women and girls to work "from 8 a.m. to 10 p.m."(1) Mr. Bignold further quoted a letter he had received from an inspector at Glasgow, who stated that in his experience the system of overtime for young girls "worked very badly." The lot of dressmakers' assistants was contrasted with that of girls who worked in textile factories where the hours are limited to 56½ per week, and where overtime is not allowed. "We may have a girl working in a cotton "factory who is home from her work at half-past five, "while her sister, working in a dressmaker's or a "milliner's place, under worse sanitary conditions, "does not get home till past 10." The unhealthy conditions of work too often found in such establishments, such as absence of warmth and fresh air, and the practice of overcrowding, have been alluded to under the section "Ventilation." When to these are added the sedentary nature of the occupation, it is not surprising to find that "overtime" is considered "very injurious to health." The late walk through the crowded streets at night was further mentioned as "not conducive to morality."(2) "Our . . . . experience "as factory inspectors," says H.M.'s Inspector for the Southampton District, "goes more to the question of "physical evil, and I have seen many a girl toiling "away in a workroom, where the gas has been burning "for five hours, upon whose face it did not want the "eye of a doctor to discover the traces of the irre-"mediable mischief which was going on."(3) [§ 746 (c).]

Overtime and "young persons."

5. INSPECTION AND LEGISLATION RELATING THERETO.

QUESTION OF LEGISLATIVE REGULATIONS WITH REGARD TO CERTAIN EMPLOYMENTS OR CLASSES OF WORKERS.

Laundries.

747. The insanitary conditions under which work is often carried on in laundries, and the injurious effects of the excessive hours worked in some districts have already been shown.(2) Hence arises the demand in some quarters for the inclusion of laundries under the Factory Acts. Opinion appears to be much divided on the subject. The Lady Sub-Commissioner who investigated the condition of women's employment in laundries in and near London stated that "the results "of such a limitation are so very problematic that "some of the employers found it difficult to decide "whether they would or would not be injured by such "a restriction." Of those employers who had formed an opinion on the subject, it appeared that the majority were in favour of limitation of hours, while the laundresses interviewed were about equally divided. Two independent investigations into the question of the conditions of work in laundries and the desirability of their inclusion under the Factory Acts were undertaken by the Women's Industrial Defence Committee, in London, and by the Women's Protective and Provident League of Glasgow, in that and other large towns in Scotland. In both cases very definite conclusions were arrived at, though unfortunately they were diametrically opposite. The report of the former states that the great majority of the employers and most of the laundresses, especially the more highly skilled and intelligent, are against such restriction of hours, while that of the latter states that the great majority of employers and almost all the laundresses are in favour of it. This marked diversity of opinion may be in some measure accounted for by the fact that the worst conditions—especially with respect to excessive hours—are those reported from Scotland. The opponents of the proposal contend that such restriction is impracticable in an industry in which demand is necessarily so uncertain. Further, that small and domestic laundries could not be subjected to the fixed limitation imposed by the Factory Acts without grave economic results. The higher prices, it is urged, necessitated by the shorter hours would lead to loss of work in some cases, and the gradual elimination of the smaller laundries in others, and thus great hardship would be inflicted upon a certain class of necessitous laundresses. Finally, it is contended by various laundresses that such restriction of hours is an unwarrantable infringement of their liberty. As one laundress in Acton remarked, if she wanted to leave off work she left off, and if she did not want to she went on. On the other hand, it was urged that the dislocation of the trade with regard to the distribution of work between large and small laundries, and the difficulty of apportioning the work within fixed hours, would be only temporary, and would right itself in time. It was, moreover, "absolutely necessary" for the State to put a stop to the abuses which have been shown to exist. The inference from the arguments of the advocates of this step is that the injury to the health of the workers resulting from the excessive hours worked under unhealthy conditions in many places under the present system would outweigh any hardship that legislative restrictions might impose upon any individuals or special class of workers.(4) Some more detailed evidence may be given on these points. The different difficulties involved in the limitation of hours appear to apply to different classes of laundries. For instance, the impossibility of restricting the hours of work within fixed limits was largely brought forward by those laundries who wash for clubs and hotels. "Many "families arrive . . . . at hotels who have all their "linen used up on the Continent and are going further "at once. This linen can only remain three or four "hours in the laundry, and has to be done whatever "time it may be, and people cannot carry with them "sufficient linen to prevent this . . . . It is a peculiar "trade dependent on the habits and caprice of indi-"viduals." "Hotels will promise anything to their customers and then we just have to carry it out," said another manager. This would appear to be the chief difficulty with this class of laundry. Another employer who took club and hotel table linen said the only effect that a limitation of hours would have was that hotels, &c. would be compelled to keep a sufficient stock of table linen for emergencies.(5) A witness from Scotland expressed the same opinion, adding, that it would "prevent their making rash promises to customers." Two hand laundry proprietors who were in favour of the change also said that the result would be that ladies would have to have more linen, and it would have to be collected when the clean linen was taken back. It was also urged that many laundries were short-handed. The irregularity of the women themselves was brought forward on all sides as a very great practical difficulty. One laundry proprietor said, "a limitation of hours was "quite impracticable, as the laundresses could never "be induced to come punctually in the morning."(6) This difficulty was especially urged in the case of small or shop laundries, the women preferred to work long hours on four or five days in the week and then have one or two clear days for their domestic duties. This was particularly the case in England. As the majority of laundresses are married women they often turn to washing for a short time while the husband is sick or out of work. Thus it is pointed out that the difficulty of legislative restrictions in an industry in which the demand for work as well as the supply of workers is irregular is unusually great. Many of the laundresses themselves, it is stated, would greatly resent the

Difference of opinion as to legislative interference.

Practical difficulties.

[§ 747.] proposed restriction of hours, as they would thereby be deprived of the extra money they earn as overtime.(1)

Economic difficulties. It is also contended that the economic effects of bringing laundries under the Factory Acts would be to "abolish the small laundries for the benefit of the large." It appeared to be thought that the limitation of hours would be naturally followed by a rise in prices. This might compel the poorer class of customers either to give their work to people washing and ironing in their own homes or to do their washing at home themselves. Or again they might "send their small easy things" to steam laundries, where they could be done cheaply by machinery.(2) The proprietors of the hand laundries seemed to consider it doubtful if "customers would ever pay more." "Ladies screwed the laundries down dreadfully." Another witness, however, said, "if "prices rose, probably some people would do their "washing at home, but those were the people all the "laundries could most easily afford to lose."(3) It was also urged by the Women's Industrial Defence Committee that the restriction of hours would lead to women being replaced by men, and an extract from the census returns was made showing that the number of men employed in the "washing and bathing service" was increasing largely. On the other hand it appears, from the report of the Lady Sub-Commissioner, and more particularly from that issued by the Women's Protective and Provident League of Glasgow, that the majority of the witnesses and even some of the managers of shop and private laundries in Scotland (where the feeling in favour of legislative restriction of hours was very pronounced) did not anticipate any serious inconvenience from the proposed change, "if all laundries are made alike." It was stated "that the public might feel some incon- "venience to begin with, but would probably get "educated up to it." Another proprietor thought there was nothing in the nature of laundry work to prevent the restriction of hours to Factory Act limits. The irregularity of the workers was the sole difficulty. Again it was stated that it would equal se the work and "the regular hours would steady the women." With regard to the contention that the restrictions would crush the small laundries, it was stated that "the "general opinion appears to be that the trade would "adjust itself and be distributed very much as it is at "present, *i.e.*, each class preserving its own class of "customers."(4)

Summary of arguments. The report of the Women's Industrial "Defence Committee sums up its case against the legislative restriction of hours worked in laundries thus:—"On the whole, we cannot but conclude that bringing "all laundries under the Factory Acts would crush "out the small laundries and concentrate work in big "buildings; this would mean more machinery, men, "and lads, and fewer women, and would thus take "away from a large class of necessitous women one "of their chief resources." On receipt of the report, the Committee passed the following resolution, "That "while admitting the desirability of protection for "children, the Women's Industrial Defence Committee "protest emphatically against any interference with "the hours of labour of adult women in laundries, being "convinced that such interference would deprive a "large number of women of a means of honest living." On the other hand, the Council of the Women's Protective and Provident League at Glasgow passed the following resolution:—"That the conditions of women's "labour in public laundries of this and other "cities of Scotland, disclosed by Miss Irwin's "report, make it absolutely necessary that these "laundries should be brought under State regu- "lation and inspection; that, in particular, it has "been shown that the number of hours per week "during which these workers are forced to labour is "often excessive, and that the evils of such excess are "greatly aggravated by the irregularity with which "the work is distributed between different days, and "especially by the way in which it is often continued "through part or the whole of Saturday night; that "the conditions under which this protracted labour is "undergone are often unhealthy, the laundries often "being so constructed or arranged that it is impos "sible to prevent the temperature from rising to "86 degrees or upwards; that it has been shown by "the testimony of skilled persons, and by the facts of "supply and demand, that there is nothing in the "nature of the business to make these evils, and par- "ticularly the excessive hours of labour, necessary, but "that individual employers in competition with each "other are altogether unable to remedy them even [§ 747.] "when they are willing; that, therefore, in the opinion "of the Women's Protective and Provident League, "there is an urgent necessity that the laundries "should, without delay, be brought under the Factory "and Workshop Acts with a view to the limitation of "the hours of labour, and the securing of healthy "conditions in the buildings in which the work is "carried on." It appeared from the evidence that as laundry work was so peculiar, both as regards its special requirements and the character of the workers, it would require greater elasticity than is allowed by the limits imposed by the Factory Acts. But it also seemed possible that there might be some middle course between bringing it under the hard-and-fast lines that were designed to meet quite different conditions, and leaving it in its present unregulated state, where abuses such as those described in the Scotch report are unchecked. For instance, one of the objections to the limitation of hours under the Factory Act appeared to refer quite as much to the limitation of the actual hours between which work might be carried on as to the restriction of the number of the hours themselves. The great difficulty brought forward in many cases was the irregularity and unpunctuality of the women, who, being in most cases married, have their domestic affairs to attend to before leaving home. As the evil complained of is rather the length of hours than the time during which the work is done, it appeared that this objection might possibly be met by according a greater license in the case of laundries as to the hours during which work may be legally performed. But whether or no any restriction of hours is advisable, the evidence afforded no reason why laundries should not be placed on the same footing as factories and workshops with regard to the inspection of the sanitary condition of the premises and of the machinery in those places where it is used. It was shown in the section Ventilation(1) how great is the necessity in many places. As things stand, by the Factory Act of 1891 the Secretary of State has power to send an inspector to any laundry where he has reason to believe any sanitary abuse exists. But unless a definite complaint from a particular place is made, it does not appear that the sanitary arrangements of laundries are inspected at all. The machinery in steam laundries is not at present under inspection, although it is in some cases "dangerously crowded." An employer who was advocating its inspection seemed quite unaware that this was the case in his own laundry.(2)

Shop assistants. 748. The very trying nature of the work of the shop assistant, and the serious effect of the long hours on the health, have already been described.(3) Various proposals for State interference are urged. At present, by the Shop Hours' Regulation Act, 1886, which applies also to public houses and restaurants, children and young persons are restricted to 74 hours a week, inclusive of an undefined interval for meals, which is longer by 14 hours than the time that may legally be worked by women in non-textile factories. Suggestions are made to extend this Act to all women, and again to all men; to extend the Factory and Workshop Act to all shops where assistants are employed; to subject the living and sleeping accommodation to inspection, and to promote an Early Closing or Half-Holiday Bill. Thus, Mr. Pollock, secretary to the Scotch Shopkeepers' and Assistants' Union, advocated considerable amendments to the Shop Hours Act, and the extension of its range to both men and women, with, however, certain arrangements in the case of the former for working longer hours on special occasions, due notice being given to the inspector. He was of opinion that the Act should reduce the limit to 66 hours, inclusive of meal times, that it should fix a certain length of day, provide for the inspection of the sanitation and ventilation of shops, and the appointment of women inspectors, and stipulate for an hour for meals for shop assistants, and that the whole country should be under some inspector whose address should be known everywhere.(4) But, whatever form the reduction of the hours of women shop assistants might take, a fear seems to be generally felt that unless the hours of the men were similarly restricted, women would be placed at a disadvantage. Some employers did not anticipate this result, but one London shop-keeper, while asserting that his assistants did not work more than 74 hours a week, said that should the hours of women be limited to 74, he should dismiss those in his employ, and replace them by men.(5) In Scotland the feeling among women shop assistants is reported to be, "that any limitation

[§ 748.] "of working hours in shops which is not applied "equally to men and women would be injurious to the "industrial interests of the latter."(1) The Lady Sub-Commissioner who collected evidence from London shops "received a general impression that the men "were much more actively discontented with their "long hours than the women, and that, were a limita- "tion of the hours of the latter by legislation possible, "the men would of their own initiative be induced to "secure equally short hours for themselves." She adds, however, that "this statement only applies to the "drapery business; in places where only men are "employed, with the exception of a few women as "cashiers, a limitation of the hours affecting women "only might easily have the effect of driving women "out of employment, unless a very decided difference "in the rate of payment prevails."(2) A practical obstacle urged in the way of legislative limitation of hours in the case of shop assistants was the impossibility of enforcing such regulations "owing to the "great difficulty in proving that assistants had been "working the whole time the shop was open, and also "the unwillingness of the girls to give evidence against "their employers." Moreover, a fear was expressed lest, if the present Shop Hours' Regulation Act were applied to women, the sanctioning by law of so high a limit as 74 hours should encourage employers to increase their hours of work to that standard.(2)

Inspection of living and sleeping accommodation.

With regard to the desire sometimes expressed for the inspection of the living and sleeping accommodation of both shop assistants and barmaids, the Lady Sub-Commissioner states that she considers that "the difficulties of such "inspection would be very great owing to the impossi- "bility of fixing any standard of necessary comfort or "cleanliness."(3) That the standard prevailing in many cases is extremely low has been shown in a previous section, "Lack of provision for health and comfort of shop assistants and barmaids." It was recognised that this doubtless a point in which very large discretionary powers would necessarily be left in the hands of the inspector. Still, the question was raised whether the mere fact that the living and sleeping accommodation was subject to inspection, and that abuses in this connection could be reported, and their remedy enforced, would not do much towards the inauguration of a better state of things.

Compulsory early closing.

An Early Closing and Half Holiday Bill, subject to local option, is favoured by the Scottish Shopkeepers' and Assistants' Union.(4) The Lady Sub-Commissioner who made inquiries in Scotland says, "I have frequent expres- "sions of opinion from employers that they would "gladly close earlier if other shops in their trade in the "district did the same." And again, "The consensus "of opinion from assistants in shops which keep open "after 7 p.m. is that earlier hours will never be obtained "until made compulsory by law."(5) Several shop-keepers in Ireland, while saying that they could not close early when other shops kept open, were of opinion that legislative limitation of hours would not injure the trade.(6) With regard to the half-holiday, one employer maintained that his assistants preferred to choose their day rather than have it fixed definitely for one and all. On the other hand it was pointed out that unless there was a fixed day they were liable to lose their holiday.(3)

Barmaids.

With reference to barmaids, it may be noted that a suggestion was made before the Commission in favour of the legislative restriction of their hours.(7) No evidence on this point, however, was brought forward by the Lady Sub-Commissioner, who subsequently investigated the conditions of labour in public houses and restaurants.

Dress-makers and "localised overtime."

749. The demand for further legislative restriction of hours in the case of dressmakers and milliners, &c., arises chiefly, as has been already shown, from the grievance of overtime. Under the present system dressmakers may legally work for two months in the year from 8 in the morning till 10 at night. H.M. Inspectors urge that, in the interest of the workers, this "overtime" should be entirely done away with. One of them stated before the Commission that his time was largely taken up in the endeavour to keep overtime in check, and that with the present inadequate staff of inspectors, it was impossible for this "most important duty" to be adequately performed. He pointed out a "grave defect" in the existing law, by which inspectors are only apprised of the fact that overtime is being worked after it has been begun. About nine-tenths of the notices of overtime "come from "dress and millinery and mantle-making establish- "ments." He was of opinion that the work could and should be all done with in the 12 hours, "it only wants a little arrangement." Overtime "has immensely increased." "I think it ought to be stopped, and might "be stopped, and if it is not stopped we ought to have "considerable assistance in keeping it in check." Other inspectors referred to the system of overtime as "pernicious," "disgraceful," and "iniquitous," and the demand was made for the concession of overtime to be reduced to the "lowest possible limits" and to be restricted to the case of "manufacture of perishable articles of food." (1) [§ 749.]

Excessive hours worked by the "young person."

750. The question of the length of hours which it is legally permissible for the "young person" to work has been constantly brought forward in the evidence. The case of the young person has never been treated by itself, and consequently great anomalies exist with regard to the hours she may legally work in different employments. In textile and non-textile factories young persons are subject to the same restrictions as women. That is to say, they may work 56½ hours in the former with no overtime, and 60 hours in the latter with overtime in certain specified cases. It is in connection with overtime in non-textile factories and workshops that some of the chief abuses arise, especially with reference to dressmaking and clothing establishments. Thus a girl between the age of 13 or 14 and 18 may, "with the sanction of the Factory and Workshop "Act, work 77½ hours in one week, less meal times." Hence by legalising overtime for young persons, they may be employed from 8 in the morning till 10 at night for five days a week for two months in the year. As one of H.M. Inspectors remarks, "If eight hours can be properly considered the time for adult males to work, how can it be right to allow females and young persons to be employed for 14 hours?" Another inspector suggests that where "the absolute necessity of overtime was established,"—which, in his opinion, would be in very few cases—the age of the "young person" should be raised to 21 if a girl, and 16 if a boy. He further advocates the compulsory medical examination of all such "young persons" by the certifying surgeon before such overtime permission is granted. This, he remarks, is "far more reasonable" than the present very limited requirement for certificates of fitness of young persons in certain classes of factories before they are allowed to work the *ordinary* hours.(2) The only other cases in which the hours of work for the young person are legally defined are in the Shop Hours and the Coal Mines Regulation Acts. By the former young persons may be legally employed for 74 hours a week. This, the general secretary of the Scottish Shopkeepers and Assistants remarks, is "too long. It "should not be more than 66 hours, including meal "hours." It is a common occurrence, he states, for "message girls" to be sent out when the shop closes, delivering goods after 9 o'clock on week nights and after 11 on Saturdays.(3) By the Coal Mines Regulation Act the hours of boys working below ground, and of any young person of either sex working above ground, may not exceed 54 a week, or 10 in any one day. In industries which are not covered by these or by the Factory and Workshop Acts the hours of labour of young persons are entirely unregulated. Thus the hours worked by children and young persons in laundries were found to be excessively long. This was especially noticeable in Scotland, where the young persons worked not only as long, but longer, than the adults, as they often had to take the linen home at night after the work was done.(4) One of the Lady Sub-Commissioners noticed that in the steam laundries children and young persons were working at the calenders, which is the hottest part. "They stand the "whole day in this great heat, for hours which the "laundry managers themselves say are longer than "those allowed to adult women by the Factory Act."(5) It would appear from the evidence that some steps are necessary to regulate the hours of all young persons. That they are in most cases excessive seemed to be a general opinion, and many of H.M. Inspectors, who have special opportunities of observing the injurious results, held strong views on the subject.(6) It could hardly be denied that a careful restriction of the hours of young persons would be ultimately an economically sound policy, since the adult worker would be more efficient if she had not been overstrained in her youth. Various suggestions were thrown out upon the question of restriction of hours. One of H.M. Inspectors of Factories who gave evidence before the Commission

[§ 750.] was of the opinion that overtime in the case of young girls should be abolished. This would leave a normal working day of 12 hours including meals, with a short day on Saturday. If "overtime" were thus absolutely forbidden in their case, it appeared that the chief evil with regard to the excessive hours worked by the large number of young persons employed in non-textile factories and workshops—and especially in dressmaking establishments—would be to some degree remedied. But such a step would not cover those cases where the hours are totally unrestricted, as in laundries, or those in which the legal hours are already too long, as in shops. For this reason, it was asserted that the matter could hardly be put on a satisfactory footing unless a general limit were set upon the hours legally permissible to any young person in whatever industry. (It may be noted that the shortest hours that are legalised in the case of young persons are those which they are permitted to work in textile factories, *i.e.*, 56½ per week, and "above ground" in coal pits, *i.e.*, 54 hours per week, and about these no complaints are made.) If, again, the suggestion of H.M. Inspectors were adopted, and the age of the young person so protected were raised to 21, as is the case in France, the benefit arising from the shorter hours would be far-reaching.(1) On the other hand it must be remembered that unless the hours of boys and girls were equally restricted, the girl might be at a disadvantage in seeking employment. A representative of the Amalgamated Society of Engineers was of opinion that the age of the young person of both sexes should be raised to 21.(2) In reference to this question the Warden of the Women's University Settlement at Southwark states that, in her opinion, "the hours of labour of girls and young women are "too long, and that it would be very desirable that "they should be shortened." "If these classes," she adds, "were efficiently protected for a long enough "period, say, till the age of 18 or 20, they would "probably be able subsequently to take care of themselves, in which case State interference on behalf of "women would be unnecessary."

Restriction of the employment of married women. (*a.*) *In dangerous or unsuitable employments.*

751. (*a.*) The question of the restriction or prohibition of the employment of married women in dangerous or unsuitable employments stands apart from the general question. In the case of two of the most unhealthy industries, *e.g.*, white lead and pottery manufacture—recommendations on the subject have recently been made by the Departmental Committees appointed to inquire into the conditions of labour in those employments. The report on the potteries states that "it is "sufficiently established that lead may provoke miscarriage when a woman is pregnant, and likewise "operates prejudicially on the unborn child, if it "survives its birth. It is therefore undesirable for "married women to be employed in processes where "lead is used."(3) The report on white lead manufacture advocates the prohibition of the employment of any woman in the dangerous processes.(4) The common custom of the employment of the wives and children of boatmen on canal boats was also attacked on general grounds by various representatives of that industry. It was contended with great force that the rough and heavy nature of the work rendered it extremely "unsuitable" for women—"hard," "degrading," "dangerous," were other epithets applied in this connection—and the practice of women climbing up the lock gates from the boat was quoted as a case in point. The secretary to the Mersey Watermen and Porters' Association stated that women and children were chiefly to be found in "slow boats," and in a "few cases" when the husbands are good and the women are not required "to do the real work of navigating the boat, as the great bulk of the women were," but merely to "assist in steering," to look after the cabins and "attend to the meals," no harm was done, and the family was able to keep together without great expense.(5) But more often the provisions of the Canal Boats Act were openly violated, a far larger number of persons live on board than is legally permissible, the children practically escape all education, and the effect on the women is that described above. Various witnesses who gave evidence before the Commission strongly urged that the Canal Boats Act should be extended, and that the employment of women and children on the boats should be prohibited.(6) Mr. George Smith of Coalville, however, who is the author of various works on the canal population, while fully recognising all the evils resulting from the present system, did not wish "to interfere with adult female labour by law." The difficulties in the way of such a step he regarded as "insurmountable." If, however, the employment of children were legally prohibited, the gradual withdrawal of the women from the boats would be a natural consequence.(1) The Lady Sub-Commissioner who visited the nail and chain making district deprecated legal interference with the work of married or of young women. "Any sudden prohibition "in the present state of trade would mean the work-"house to many thousands." She advocates rather a gradual lessening of women's work in the trade brought about by indirect means. "Efforts made by "philanthropic people to induce young women to "adopt a more suitable employment, and the establish-"ment of other industries in the district seem the "better way to approach the difficulty." As to restricting the weight of iron she says, "the women "have free choice of work, and the fine chain work, "when well done, certainly pays best. The muscle "and constitution of the worker appears to be the "natural guide to the kind of work chosen . . . . "They do what suits them, what they can get orders "for—in short, what pays best."(2) [§ 751 (*a.*)]

(*b.*) *In all employments.*

(*b.*) It appeared that in most industries, especially in the textile industries, great difference of opinion existed as to the advisability of restricting by law the employment of married women, although all classes agree as to the undesirable effect produced upon the home by the present system. The employers at Glasgow "unanimously disapproved" of married women's work, and four employers in Yorkshire desired "compulsory restriction." A fancy hosier employer at Leicester stated that he "discountenanced" home work as far as possible.(3) The evidence of working men examined before the Commission and by the Lady Sub-Commissioners showed that a strong feeling was rising amongst the more thoughtful in various industries against the practice of employing married women. This was especially noticeable in the nut and bolt and chain and nail industry, where legal prohibition was in most cases demanded.(4) It may be noted that this opposition was usually found in those districts where the question of competition with the men comes in.(5) But the objections chiefly urged were those based upon social and domestic grounds—which have been already discussed in detail (6)—the disastrous effect upon home life and upon the health of the mothers and children. On the other side it appears from the evidence—with the partial exception of Birmingham—that the pressure of poverty and the necessity of keeping the home together when the husband is ill or out of work drives married women to seek employment either at home or in factories. However undesirable this may be, the argument of sheer necessity is difficult to gainsay, and the large numbers of married women at present working are opposed to any restriction. Thus, Mr. Sidney Webb, who was strongly opposed on all grounds to the employment of married women, did not advocate its direct prohibition. The proper aim, in his opinion, was to hasten the advent of such a social development that mothers of families should be released from their present necessity of working for their living.(7) Many workers, it is stated, fear that the immediate withdrawal of married women from the factories would have a very bad effect upon the homes, which for any of the reasons above stated are practically supported by the wives' labour. Objections are also raised against restriction on moral grounds. It is feared that any such measure would tend to give an advantage to unmarried women in wage-earning, and thus discourage marriage and encourage the evasion of the law by concealment of marriage.(8) In the case of the nail and chain and bolt making industry, where extremely early marriages are the custom, it is pointed out that the youths and young girls would evade such a law by avoiding the legal ceremony of marriage altogether.(2)

Inspection of Domestic Workshops.

752. A demand was made in some quarters for the inspection of domestic workshops. The distinction between small workshops, which it was stated constantly escape inspection, and domestic workshops proper, in which only members of the family are employed, was not always clearly kept. The former, whatever their size, are already under the Factory and Workshop Acts in all particulars and should be

[§ 752.] inspected by the local authorities. Complaints on this head therefore resolve themselves into complaints as to the working of these Acts in certain cases. Domestic workshops are also under the Acts, but in one particular and in respect to one class of persons only. Children and young persons in domestic workshops are subject to the same limitation of hours as are imposed on them in non-textile factories (*i.e.*, 62½ per week) though the period during which work may be carried on is extended (*i.e.*, 6 a.m. to 9 p.m.). The hours of adult women working in domestic workshops are entirely unrestricted. The demand for the inspection of these workshops would appear to rise very largely from the desire to remedy the insanitary conditions under which home work is constantly carried on, which was complained of on all sides. Particular reference to the conditions of labour in home industries was made in paragraph 729 in the section dealing with the employment of married women.(1) Amongst other proposals, Mr. Charles Booth, giving evidence before the Commission, suggested a "wide extension of the Factory Acts" which would bring "most indoor employments "under regulations as to hours of work, space to work "in, and sanitation." He proposed that the legal definition of workshop should be extended so as to include any room or place in which any person who employed or worked in partnership with any other person—with the exception of the wife working with or for her husband—was engaged in any process of manufacture. The landlord, in his opinion, should be partially responsible for the carrying out of the Acts. He also proposed a plan for the registration of all workshops.(2) It may be noted that in November 1892 the Home Secretary, under section 27 (1) of the Factory and Workshops Act of 1891, issued an order by which all employers and their contractors who were engaged in the manufacture of articles of wearing apparel, electro plate, files, or cabinet and furniture making or upholstery work, were required to keep a register with the names and addresses of all persons employed by them as "out workers," which should be open to inspection by the factory inspectors or by the sanitary authorities.

DEFECTS AND ANOMALIES CONNECTED WITH THE FACTORY AND WORKSHOP ACTS.

The division of powers between the local and central authorities with regard to sanitary matters.

753. The unsatisfactory sanitary condition of many factories and workshops was attributed by various witnesses to the dual control exercised over sanitary matters by the central and local authorities. The law with regard to the degree of responsibility and the division of powers between them is obscure, but appears to stand thus:—By the Factory and Workshop Act of 1878, the responsibility for the sanitary condition of both factories and workshops was put into the hands of the central authority (sec. 3). If the inspector found any abuse which was punishable under the Public Health Act, he was to report the matter to the local sanitary authority, whose duty it was to take such action as might "seem proper for the purpose of enforcing the law" (sec. 4). Any reform in sanitation which would require structural alteration would appear to come under this head.(3) By the Act "to consolidate and amend the law relating to factories and workshops" of 1891, the entire regulation of the sanitary condition of workshops was taken from the factory inspectors and given to the local sanitary authorities (secs. 3 and 4.) Thus the responsibility now lies with the local authorities in the first instance in all cases, instead of as in the case of factories, only after a specific defect has been brought to their notice by the factory inspector. In both factories and workshops it appears that the sanitary provisions fall under two heads: (*i.*) Those punishable under the Public Health Act, which relate mainly to drains and sewers, and to some extent to the provision of decent sanitary accommodation. (*ii.*) Those which are required by the Factory Acts, which relate to cleanliness, ventilation and overcrowding. As the law now stands, the former should be enforced by the local sanitary authority in both factories and workshops, and the latter by the local sanitary authorities in the case of workshops, but by the factory inspector in the case of factories.(4) In certain processes in manufacture where special ventilation is required, the factory inspector can enforce its adoption in both factories and workshops (sec. 36 of Act of 1878). The Act of 1891 provides, however, that the central authority shall retain full power to remedy abuses in both factories and workshops in the last resort (secs. 1 and 2.) By section 4 of the Act of 1878 the factory inspector did not appear to have any power to enforce any reform which was "remedial under the law relating to public health" if the local authority failed to do so. By section 2 (2) of the Act of 1891 it appears that when notice of any such defect, either in a workshop or a factory, has been given to the local sanitary authority by the inspector, and steps have not been taken within a reasonable time towards remedying it, the inspector may take the matter into his own hands, remedy the evil and recover all the expenses incurred, which are not recovered from any other person, from the sanitary authority. Although in workshops these provisions of the Factory Act of 1878 with regard to other sanitary matters, such as ventilation, overcrowding, or lime-washing, which are not covered by the Public Health Act, are by the Act of 1891 turned over to local authorities in the first place, yet if the Secretary of State is satisfied that the provisions of the law have not been carried out, he can authorise an inspector to take such steps as are necessary to enforce the said provisions. The expenses of such proceedings which are not recovered from any other person are to be recovered from the sanitary authorities. It would thus appear that workshops are now far more dependent on the local sanitary authorities in the first place than factories, and it is with regard to workshops that the chief complaints concerning the working of the Act of 1891 are made. One defect in the Act would appear to be that there is no guarantee that the sanitary authority is fit for the responsibility thus laid upon it. It seems from the evidence that in many cases it is wholly unfit, and the report from various quarters has been "nothing has been done." No special machinery, such as an efficient staff of workshop inspectors, was required by the Act, and in many cases such provision does not appear to exist. Some idea of the qualifications of the local authorities in some places may be gathered from the opinions of H.M. Inspectors giving evidence before the Commission. The local authority was described as sometimes "inert," especially in the "country districts," where "the machinery is sometimes very defective." It was thought that "most of them had a sanitary inspector and a medical officer of health," but up to the time this Act was passed their duties were generally very light, and their pay would not be sufficient to enable them to spend much time on their work, "even if they were to be remunerated at all." "The problem is how to make the local authorities do "their work, I do not think we are much nearer the "solution of that question," said another inspector.(1) One disadvantage of putting the sanitary regulation of workshops under the local authorities which was brought forward by the treasurer of the Trades Congress Parliamentary Committee was that when the local inspector was working side by side with manufacturers, as was usually the case in manufacturing towns, he would naturally feel some diffidence in sitting in judgment on his fellows, which would not be felt in the case of a Government inspector. He also stated that if workshops are under the local authorities, "the employers are apt to "get to know who makes complaints better than they "could through the factory inspectors."(2) Still, although the sanitary authority may be found wanting, the Secretary of State is empowered by the Act of 1891 to authorise a factory inspector to remedy any regulations (sections 1 and 2). But there does not appear to be any precise machinery by which such "defaults or neglect" is necessarily made known to the Secretary of State, unless a special complaint is made to him or to a factory inspector on the subject. The factory inspector presumably visits the workshops to see that regulations other than sanitary of the Factory and Workshop Acts are complied with, and the final supervision of the carrying out of the sanitary clauses of the Act of 1891 might then come before him. But as owing to the enormous number of factories and workshops in the charge of one man, he may only be able in the ordinary course of things to visit each workshop "once in three years" or "once in two years"(3), it is obvious that serious sanitary abuses may exist for a considerable while before they are detected and their remedy enforced by the central authority. And even then, it is not until the defect has been pointed out to the local authority and "reasonable time" has elapsed and the evil is still unremedied, that the factory inspector can deal summarily [§ 753.]

[§ 753.] with the matter. To this dual control one of the Lady Sub-Commissioners attributed much of the evasion of the law with regard to sanitary matters which was found in so many places. In Lancashire, where the sanitary conditions of the mills was extremely bad, "I could only find one case in which "the local sanitary authority had taken action. In "this case the visit of the sanitary inspector had "taken place some time previous to mine; the "nuisance still remained, and the owner of the mill "remarked that as he believed the local sanitary "inspector was in the pay of the plumbers he did not "intend to improve his accommodation."(1) Again, the lavatory in a second-class tailor's shop in Glasgow was found to be in a filthy condition. "On account of "the effluvia witness has four times appealed to the "sanitary authorities on the matter, but although an "inspector called every time after her applica- "tion, no alteration had been made in the sanitary "arrangements." Six months had passed since her first appeal.(2) "Confusion in work has been the "result of confusion in control," and the work of the recently appointed sanitary inspector in Nottingham, Miss Hawkesley, is said to be "much hampered by the "divided powers with regard to sanitation, which she "shares with factory inspectors."(3) H.M. Inspectors of Factories make the following criticisms on the working of the sanitary clauses of the Act of 1891 with regard to workshops. "I am satisfied," says one, "that it would be more satisfactory to have the "administration of the Workshops Act concentrated "under one authority. It could be done either by the "factory department or by the local sanitary autho- "rities much better than it is done now, when both "share the responsibility." One of H.M. Superintending Inspectors observes, "In a few towns, such as Bir- "mingham and Nottingham, the work has been under- "taken by the city councils and officers appointed to "visit the workshops, but in the vast majority of "towns and villages nothing has been done by the "local authorities." Again, "As to the new sanitary "clauses, I find that those which are now under the "administration of the sanitary authorities have "received a very unequal share of attention in the "different towns to which they apply, in fact with the "exception of Leeds and one or two small places I "have as yet found no signs of any action having been "taken at all. In more than one instance have I been "told by the medical officers of health when calling "upon them, as desired by you, that they have drawn "their sanitary committee's attention to the new Act, "but have received no instruction to put it into opera- "tion."(4) It would appear from the foregoing evidence and from the reports of the Lady Sub-Commissioners, that so far in certain large progressive towns the system works admirably,(5) but that in many other cases the complaint is not so much that it works badly as that it does not work at all. Unless some means are devised for insuring efficiency and zeal on the part of the local sanitary authority or for providing machinery whereby defaults on their part are speedily rectified by the central authority, it would seem that the sanitary provisions of the Factory and Workshop Act of 1891 were likely in many cases to remain a dead letter.

Other defects. Want of clearness in the "Abstracts."

754. Various minor defects connected with the Factory and Workshop Acts were noted. Want of clearness in the "Abstracts" was one of these points. These, in the opinion of one of the Lady Sub-Commissioners, were "incomprehensible to anyone but a factory inspector." The factory instead of the workshop abstract was found to be posted up in some cases, one employer stated that when he went to buy one he had not known which abstract to ask for. In other cases when the right abstract was put up it was filled in wrong. In consequence of the obscurity of these documents, they do not afford much protection to the workpeople, who often appeared quite ignorant of their contents. One girl was found to be under the impression that by the Factory Act overtime was not merely permissible but compulsory.(6) One of H.M. Inspectors giving evidence before the Commission said: "I think "it would be a useful aid to inspection if a popular "publication of a few of the regulations were made." It may be noted that an attempt to supply this want so far as the Factory and Workshop Acts is concerned has been made in the form of a memorandum prepared by "one of the labour correspondents of the Board of "Trade, assisted and advised by the Chief Inspector "of Factories," which is published in the July number of the "Labour Gazette" for 1893. As these abstracts are sometimes put up in parts of the building where certain classes of the workers rarely if ever enter, it was suggested that "it might be desirable to bring it "more immediately under their notice by having a "copy fixed in every workroom of a workshop. At "present the number of abstracts is left to the dis- "cretion of the factory inspector."(1) The evasion of clause 24 of the Factory and Workshop Act of 1891, which enacts that "sufficient particulars" shall be supplied with the work to enable the worker "to "ascertain the rate of wages at which he is entitled to "be paid" has already been referred to.(2) At present this requirement only refers to "weavers in the cotton, "worsted, woollen, linen, or jute trades, or winders, "weavers, or reelers in the cotton trade." In the jute weaving districts of Scotland "it is felt to be a hard- ship" that the winders and reelers in that industry are not included in this requirement. It would seem that if some such clause as the above were made of general application it would cover various cases in which workers are paid for less work than is actually performed, though at present owing to the absence of "sufficient particulars" this is difficult to prove.(3) Another curious anomaly that was pointed out was that the Factory and Workshop Acts, while making provision for protection from fire in the case of factories in which more than 40 persons are employed, makes no provision for the safety of persons in workshops in which more than 40 persons are employed, nor for small factories or small workshops congregated in one large building.(4) Thus Miss Hawkesley, the sanitary inspector at Nottingham, complained that her powers with regard to provision against fire are confined to factories. Hence she is powerless to order that a fire-escape shall be attached to a workshop on the seventh floor, while she is empowered to make this order for a factory on the second or third floor.(5) The absence of any provision for warmth in the sanitary requirements for factories and workshops, and the prejudicial effects of this upon ventilation and the health, has already been shown.(6) It was remarked by one of the Lady Sub-Commissioners that there is, as a rule, much vagueness in the minds of the workers as to where and in what form complaints from them should be lodged. This difficulty, she believes, would probably be minimised were "local offices in connection with the inspectorate "established in the more important industrial centres, "to which workers could go for information or with "grievances. They would have much less difficulty "in approaching the inspector on matters requiring "his attention if he could be met at an office "rather than at his private residence."(7) At present London appears to be almost the only large town in which this is done.

[§ 754.]

Defects of application of clause 24 of Act of 1891.

Anomalies re provision for protection from fire in the Factory Acts.

Absence of provision for warmth in the requirements of the Factory Acts.

Absence of local offices in connection with the inspectorate.

QUESTION OF ADEQUACY OF PRESENT SYSTEM OF INSPECTION.

Importance of question of inspection in connection with the employment of women.

755. It would be difficult to over-estimate the importance attached to the question of inspection in connection with the employment of women. As women are, it appears, for the most part unorganised, and from the pressure of their circumstances and the keen competition for work are in a peculiarly defenceless position, their conditions of labour, and consequently their well-being and happiness, depend very largely upon the character of their employer and the officials he employs. "The question of wages" it has been remarked "is trivial compared with the question of regularity of employment and kind and just treatment."(8) Where the employer is considerate, just, and humane, the urgency of the question of inspection does not arise, but where he is thoughtless, ignorant, or indifferent, the importance of the point is seen. In such cases the woman falls back upon the protection of the law. Where this is for any reason insufficient, she has no resource left. That there are a considerable number of employers who are not alive to their responsibilities is only too evident by the number and extent of the various grievances that have been detailed in the course of this summary. These grievances are not, it is true, all covered by the Factory Acts, but the great majority of those connected with sanitation, ventilation, &c., are so covered, in theory

[§ 755.] at least. But in the face of the foregoing evidence it can hardly be contended that the law in these respects is in any way thoroughly carried out. This would appear to be the only explanation of the disgraceful state of the sanitary matters in some districts, such as that described in the Lady Sub-Commissioners' reports on Lancashire, Yorkshire, and parts of Scotland. The inadequacy of the inspection of workshops in many places has also been shown in the evidence, while numerous instances have been given of the open infringement of the Factory Acts in various particulars. It has been incidentally shown in the course of this summary, especially in that part which dealt with health and sanitation, to what a large extent the miserable conditions under which women work in many places are remediable. It appeared, however, from the evidence that if it were possible for the Factory and Workshop Acts to be strictly enforced, in the spirit and in the letter, very many of the grievances which were brought forward would be removed. The efficiency and adequacy of inspection depends on two things, the Factory and Workshop Acts themselves and their administration. With regard to the Acts themselves, the question arises whether they cover all the points on which legislative protection is desirable or necessary. This is naturally a very controversial point. A few defects and anomalies noted in the evidence have already been mentioned, and the cases for and against the demanded extension of the scope of the Acts in certain specific cases have been summarised. But whatever the defects in the Acts themselves and whatever the required extensions may be, it is clear that the numerous complaints which were made by witnesses giving evidence before the Commission and to the Lady Sub-Commissioners refer mainly to the administration of the Acts.

Conditions of adequate inspection: How far realised under present system.

(*a.*) *Efficiency of inspection.*

756. (*a.*) The conditions of adequate administration of the Acts passed for the protection of labour would appear to be:—The efficiency of the inspectors, the sufficiency of their numbers, and the adequacy of their powers. Although various complaints on the first head were brought forward by some of the men giving evidence before the Commission on the ground that inspectors lacked "practical knowledge of factory work," and could therefore be "hoodwinked,"(1) the apparent inefficiency of inspection seemed in most cases attributable to the insufficiency of both the numbers and the powers of inspectors. It must also be remembered that several of H.M. Inspectors complained on their side that their work was greatly hampered by the want of co-operation they met with on the part of the operatives.(2)

(*b.*) *Sufficiency of number of inspectors.*

(*b.*) With regard to the insufficiency of the present staff of inspectors there is abundant evidence. It was stated before the Commission by Miss Mears, Mrs. Hicks, and Miss James respectively on behalf of Women's Upholsterers', East London Ropeworkers', and Confectioners' Unions, that "though the industry is under the Factory "and Workshop Acts, I have only seen two inspectors "during the whole number of years that I have been in "the business." "The inspection is most unsatisfactory. "I only know of one firm where the women have "seen an inspector within the last two years . . . "The women never have an opportunity of communi- "cating with the inspector at all." "I have never "seen an inspector inside a factory . . . there "are so few inspectors and so many factories that the "former cannot always come when they are sent for."(3) Again, a representative of the textile industry in Yorkshire said, "The fact of men working in the same "mill for 5, 10, 15, or 20 years without ever seeing an "inspector ought to speak for itself. I myself have "been in the mill 27 years and have only once seen "him. If the inspectors were ever so diligent and "attentive their number relatively to the number of "factories would make it impossible that there should "be thoroughly efficient inspection."(4) Witnesses from all districts in various industries gave similar evidence: "We have nothing to complain of with "regard to the present staff of inspectors, except the "insufficiency of their numbers." "Inspection is "inadequate, the inspector has far too much work to "do." "I have not seen the inspector inside the "works for at least five years . . . I am of opinion "that he is a very overworked man." The complaint was even more marked in the case of workshops, where in some ways the necessity for inspection appeared greater.(1) The demand was made that all places in which goods were manufactured for sale—even domestic workshops—should be under inspection. The evidence of some of H.M. Inspectors corroborated to some extent that of the workers. One of them explained that he had 3,100 factories and workshops in his district, and was of opinion that the amount of work demanded from H.M. Inspectors was "utterly absurd." Another had a district containing 1,947 factories and 1,870 workshops, and "the most he could possibly do" was to visit them each "once in three years." He thought it would be "very desirable" to have "such an exten- "sion of the staff as to enable factories to be visited "once in every 12 months universally throughout the "United Kingdom." "It was even more necessary" that the country districts and small workshops "should "be properly looked after . . . for in these cases "there is more overtime worked and public opinion is "weaker than in larger towns." With reference to the question of overtime, Mr. Bignold urged that "if over- "time is to be continued, a very large addition to the "working staff is required."(2) A demand was made "that additional inspectors be appointed from among "practical men and women." The desire for the appointment, wherever large numbers of women were employed, of women inspectors who would deal with such questions as overtime and sanitation appeared to be very widespread. . . It was constantly brought forward by both men and women who gave evidence before the Commission and to the Lady Sub-Commissioners. Miss James thought it "most necessary to "appoint female inspectors. The girls cannot talk to "men as they can to women." Mrs. Hicks was "strongly "of opinion that female factory inspectors should be "appointed." Two male representatives of the English and Scotch textile industries stated respectively, "There ought to be a large staff of women employed as "inspectors. Girls do not care to complain to male "inspectors, *e.g.*, about such matters as the sanitary "accommodation." "We think there should be female "inspectors appointed wherever women are employed, "*i.e.*, in all other industries as well as our own.(3)

[§ 756 (*b.*)] *Question of appointment of women inspectors*

(*c.*) *Sufficiency of powers of factory inspectors.*

(*c.*) Another reason which the evidence showed to be at the root of the existence and continuance of the dangerous and insanitary condition of labour complained of by so many women was the limited powers held by H.M. Inspectors. This was said to be especially the case in sanitary matters, which are often those which concern the workers most, and in which prompt action is of the greatest importance. But in consequence of the divided jurisdiction of the inspector and the local sanitary authorities and the present state of the law, by which certain sanitary matters are remediable only under the Public Health Act, the factory inspector is powerless to deal with certain abuses. If an inspector of factories finds that the sanitary defects complained of can only be remedied by "structural alteration," he has no power to order this to be carried out, and can only refer the matter to the local sanitary authorities, who may or may not take action.(4) It would appear from the evidence that this limitation of power on the part of the central authority would account for many instances in which work is carried on under very insanitary conditions. Again, one of H.M. Inspectors stated that "a great deal of misapprehension exists in "the public mind with regard to the power of in- "spectors to enforce the fencing of machinery. . . . "As the law stands at present they can compel the "fencing only of what is called the 'mill-gearing.'" Another remarked that "inspectors had no power to "order the use of shuttle-guards, which should be "made compulsory." It would seem that the inspector has less summary power than is popularly supposed, and that many complaints of inadequate inspection are founded on a misapprehension of points which come actually under the Factory Acts, and of the power actually possessed by inspectors with reference to summary enforcement of remedies. The procedure necessary under the present system in taking steps to rectify any abuse, as explained by one of H.M. Inspectors, appeared to be somewhat lengthy.(5) Various suggestions were made with a view to putting an end to the anomalies caused by the insufficient powers possessed at present by H.M. Inspectors. The general opinion appeared to be that direct power to enforce any provision of the Factory Acts was far better

[§ 756 (c.)] vested in the hands of the central than of the local authority. "I venture to think it desirable," writes the Lady Sub-Commissioner who investigated the condition of women's labour in Scotland, where the sanitation was in many places extremely defective, "that a higher "standard in ventilation and sanitation be required in "mills and factories, with power on the part of the "inspectors to enforce it within reasonable time."(1) Various representatives of the men's associations expressed similar views before the Commission. "The "inspector ought to be armed with power to enforce "his orders with regard to sanitary matters in every "department." "I should like to see the duties of the "factory inspector assimilated with those of the "medical officer of health . . . . unless these officials "work in harmony nothing is done. The factory "inspector has power to give orders, but he ought "also to have power to enforce them." "I am strongly "of opinion that the inspector should have the responsibility of the sanitary condition of workshops without reference to the sanitary authority, and I am of "opinion that the sanitary authority would much "prefer that he should have that responsibility."(2) "We want inspectors to have the power of ordering "unnecessarily dangerous machinery to be fenced."

(*d.*) *Summary.*

(*d.*) Finally, one of the Lady Sub-Commissioners recorded her opinion "that the condition of mill life in [§ 756 (*d.*)] "Yorkshire for women and children could be much "improved by a more thorough system of inspection "in factories. It is not possible for the present staff "of inspectors to devote time to a detailed inquiry, "nor is it possible that they should, without such "inquiry, become acquainted with the conditions of "women's labour. The difference of wages for men "and women where both are engaged in the same "employment appears to be a matter for trade organisation, but the due ventilation of the workrooms, the "safety of machinery, and the necessary sanitary "arrangements could be enforced by law, *i.e.*, if it "were possible for the inspection to be efficiently carried "out."(3) It would appear from the evidence offered with regard to the whole of this subject that if it were possible to slightly extend the scope of the Factory and Workshop Acts and to amend them in certain particulars, if these Acts could be more stringently administered, if the difficulties arising from divided jurisdiction with regard to sanitary matters could be overcome, if an adequate number of inspectors were appointed, and if more direct powers were given to them, a great number of the grievances of women workers with regard to health, safety, and decency would be redressed.

6. OTHER CONDITIONS OF LABOUR.

Decay of certain industries.

757. In addition to those industries which are affected by seasonal causes, some may be said to be almost normally "slack," with very little prospect of improvement in their condition. Straw-plaiting is one of the most remarkable instances of a decaying industry. The competition of China, Italy, and Switzerland, from which plait can be imported far more cheaply than it can be made in England, is the principal cause of this decay, but it is also stated that the English workers cannot easily learn to change the pattern of their plaits. In consequence of the slight demand for English plait and the low prices obtained for it, many women have taken to field work instead.(3) The decay of the cotton industry in Glasgow and other districts in the West of Scotland is much dwelt upon in the report of the Lady Sub-Commissioners. "Spinning," it was alleged, "is on the decrease in Scotland," and the same is true of weaving, so far as plain calico is concerned.(4) The competition of Lancashire is said to be one of the chief causes of this decay. In Lancashire a great proportion of the work is done by men, whereas the Scotch industry is confined to women, who rarely continue to work after their marriage. It is also stated that the machinery in use in Scotch factories has not all the modern appliances of the Lancashire machinery. This fact, combined with the greater physical strength of men workers, gives the English manufacturer a great advantage over the Scotch manufacturer. Of recent years, too, there has been a great scarcity of women's labour. The decay of the mining industry, and the consequent migration of the mining population, is assigned as the principal reason for this scarcity of labour in some parts; while in Glasgow it is traceable to the variety of employments open to women as compared with Lancashire, where cotton spinning and weaving is the "one business in life."(5) In most cases, however, it is due to insufficient railway service. Wages, in many parts, are "too low "to induce women workers to detach themselves from "their families and settle in the district, while there is "a lack of conveyance for workers who live at a "distance." At present women often walk from two to four miles to and from their work, and the supply of labour thus necessarily becomes uncertain and fluctuating.(6) The same difficulty arises with regard to the linen industry at Dunfermline. "Better railway "facilities for getting into this centre would be a great "boon to the workers. There is a steady demand for "female labour at a good remuneration, and, owing to "the absence of employment for men, Dunfermline "cannot meet the demand sufficiently. In consequence "large numbers of women come from the surrounding "district. Many of them walk from two to four "miles; while, owing to the insufficient supply of "workers' trains, numbers lose from an hour to an "hour and a half at the railway station."(7)

Home industries and the "sweated" trades.

758. It is customary to speak of the underpaid home industries as the "sweated trades." No precise definition of this term was given by the House of Lords' Committee on Sweating. It appears, however, that the word "sweated" usually applies to work done at a very low rate of pay for long hours and under unhealthy conditions: and this state of things exists very largely wherever the system of sub-contract prevails, though it is also found where sub-contract is absent.(2) Where the conditions of very low pay, long hours and insanitary surroundings are wanting, even if the element of sub-contract exists, the term "sweating" is not really applicable. Where, however, work is done for an employer without the intervention of any middleman, which is ill paid, and the surroundings of which are unhealthy, the term may be fitly used.(3) The evidence showed that it would be quite erroneous to assume that all home industries or all parts of them are "sweated." Instances are found of women working in decent homes or domestic workshops, for reasonable hours, for fair wages, and evidence was given before the Committee on Sweating of a button-holer, a machinist, and a baster, who worked for a sub-contracting tailor and earned 4*s.* a day each, working for the hours permitted by the Factory Acts.(4) These, however, are exceptional instances, and only show that skilled labour is far less likely to be "sweated" than unskilled. The definitions of the "sweating system" offered by Mr. Charles Booth were "the driving of labour "by whatever means, so as to obtain the maximum of "labour for the minimum of pay," and "the advantage "that may be taken of unskilled and unorganised "labour under the contract system."(5) It is, however, from unskilled and unorganised labour that the home industries are, it appears, for the most part recruited. And when all due allowance is made for the consideration mentioned above, the fact remains that the greater number of home workers are "sweated" in the sense of working unregulated hours under unhealthy conditions for very low pay, they are not protected by the Factory Acts, and they include the mass of "unskilled and unorganised labour" of which "advantage" is taken under the "contract system." This happens in two ways. In many cases the work goes through several hands, and the wages of the actual workers are forced down to the lowest point by the middlemen, who stand between the person who wants the work done and the person who does it. In reference to this point, it may be noted that Mr. Chas. Booth, giving evidence before the Commission, stated that "such sub-letting seldom "occurred, except with regard to special processes "which are frequently the better paid portions of the "work."(6) The evidence, however, obtained by the Lady Sub-Commissioners, especially with regard to hosiery and lace-making in Nottingham, and shirt-making in Manchester, of which details have been already quoted, show that the worst paid portions of

System of sub-contract.

[§ 758.] *System of competition for contracts amongst employers.*

those trades are "sweated" by middlemen and middlewomen.(1) In other cases the same result is produced by the competition of employers for contracts, as explained by Miss Collet, "Where no trade union "exists the contract system puts an end to the com- "petition of employers for labour, which in economic "theory is always supposed to raise wages. The "consumer obtains the whole advantage. The em- "ployers compete to obtain the contract at the lowest "price; the inefficient manufacturers, of whom there "are a large number in the East End, rely on cutting "down wages, and it must be admitted, frequently add "considerably to their own labour, obtaining low "profits with increased efforts on their own part. "When a tender has been accepted and the rest have "been rejected, the competition of employers is really "ended, and the successful employer is left to make "his terms with labourers unhindered by competition. "The effect of the contract system is to make an "unconscious combination amongst employers to "obtain labour below a certain maximum rate."(2) Thus it appears that the abnormally low wages of which so many instances have been given are accounted for either by the competition of employers for contracts or by the system of the middlemen or middlewomen to whom the work is sub-let. It has been pointed out that this fact might be stated in another and perhaps a truer way. The existence of the middleman and of the class of employer just referred to is accounted for by the fact that there is an unlimited supply of cheap unskilled and unorganised labour. If education or organisation checked this supply of cheap labour the small employer and the middleman, under whom the sweating system flourishes, would perforce disappear.

The question of morality in certain employments. (a.) Bearing of low wages on morality.

759. (*a.*) The question of the morality of the workers in the different industries which were investigated by the Lady Sub-Commissioners was not always noted. In those cases in which it appeared to be unsatisfactory there was usually some special reason to account for it. Thus the connection of low wages and a low social morality was brought out clearly in the evidence in several places. "I find," says the Lady Sub-Commissioner who investigated the industrial condition of Scotland, "with regard to the low moral and social "standard met with in certain places that, as a general "rule, the morality and social habits of the people are "largely regulated by the wages they receive. This "rule is of course subject to modification by the "nature, training, and other circumstances of the "individual, but speaking generally, where wages are "good, social habits are in a correspondingly high "level; where wages are low, the reverse is to be "found." Thus it was stated at Dalry by a worker long resident in the district that there was much immorality amongst the girls. It was largely attributed to the low wages and the low social and moral standard this presumably involves. The immorality amongst some of the tobacco workers and rope teazers in Scotland was attributed to the same cause. At Ayr it was observed that while the morality and social habits of the girls still left much to be desired, the trifling advance of wages granted to the workers in the worsted spinning mill made a noticeable improvement in their habits and appearance.(3) There appeared to be much immorality amongst the lead workers near Glasgow. They were said to come from very poor homes in a country district and to be very irregular in their habits.(4) A representative of the Midland Counties Hosiery Federation stated that the result of the general reduction of wages was that the "single women suffer very much" and were, he believed, "often driven into immoral habits."(5)

(b.) Effect of lack of proper supervision.

(*b.*) It would appear that where men and women of a rough class are working together without any discipline or proper supervision, the state of morality is liable to be bad. This was found to be the case amongst the fustian and velvet cutters in a certain district. Thus "a loose tone in the behaviour and conversation" was noticed by the Lady Sub-Commissioner. "Unsuitable "songs were sung and very undesirable romping took "place even at the time of my visit. I was informed "by a police officer and the relieving officer for the "district that immorality had increased considerably "since the introduction of the fustian trade. These "witnesses believe this to be due to the freedom of "intercourse which exists between the men and women "working in these mills. They are allowed to bring "unlimited quantities of drink into the mills during "working hours, and the general tone is stated to be, "as I found it, very low. I was informed by the "Assistant Town Clerk that over 27 per cent. of the "affiliation orders granted have been applied for by "the women employed as fustian cutters, although "these form only a small proportion of the female "population."(1) In the nail and chain making district in the Black Country the same complaints were made. It was stated that young girls helped the men in most unsuitable parts of the work, and that the absence of supervision and discipline of the young people of both sexes who worked together was by no means conducive to morality. The Lady Sub-Commissioner who visited this district stated that everyone she consulted was "strongly against young girls being employed to blow "the bellows with men working beside them as it is "considered to encourage immoral behaviour."(2) On the other hand it was denied that the charge of immorality amongst the girls who work as the men's assistants in the Staffordshire potteries was justified. It was remarked by one witness that she "came across "a considerable number of cases of immoral conduct, "but had never heard of a case of immoral relations "between men and women working together in the "factory." Another witness stated that "the worst "girls she knew were those who came from a consider- "able distance. These girls when quite little, some of "them even when half-timers, got into the habit of "starting together with boys and men walking in the "same direction, and their behaviour and language "were disgraceful."(3) In connection with the general question as to the moral effect of men and women working together in the same employment, it is satisfactory to note that a witness who held "a position of trust" in one of the departments in the manufacture of sewing machines stated that "the introduction of the women had anyhow improved the men." "So far," writes one of the Lady Sub-Commissioners, "as I have "investigated employments where both sexes work "together in the same departments, evidence seems to "point to the conclusion that where women are in the "majority their influence may have the result claimed "by this witness."(4)

[§ 759 (b.)]

(c.) Effect of want of decent sanitary accommodation.

(*c.*) Conflicting evidence as to the state of morality amongst women in the textile industries was given. A representative of the Bradford and District Power Loom Overlookers' Society gave strong testimony before the Commission as to the morality of the women generally. "I have been working 27 or 28 years, and I "would stand up for the morality of the female portion "of mill life in opposition to that of any other grade "of society from the top to the bottom." This was supported by another witness from the same district.(5) The Lady Sub-Commissioner who made "the most careful inquiry into the subject" did not think that the state of morality in the textile industries of Yorkshire and Lancashire was very satisfactory. She attributes this mainly to the "insufficient sanitary accommodation, "the same closets being common in some mills to men, "women, and children." That this was the case in a greater number of mills in Lancashire than in Yorkshire was the only reason that could be found to account for "the larger number of cases of actual immorality and immoral tendencies" which were noticed in the former district. "The sanitary accommodation in mills," writes the medical officer of health for the Burnley district, "is the most debasing surrounding for women."(6) The immorality of children, who are usually employed in the spinning-rooms where the sanitary accommodation is most deficient was a matter of special complaint in Yorkshire. It was observed that if the same regulations with regard to sanitation and decency which have been thought necessary in well-ordered elementary schools were enforced in mills, a very valuable improvement would result in the moral condition of the children employed.(7)

(d.) Objectionable conduct of overlookers and foremen.

(*d.*) Many complaints were brought forward with regard to the objectionable conduct of overlookers and foremen, &c. Foul, coarse and rough language appeared to be not uncommonly used by some of these officials towards the women and children under them, an abuse against which they have no remedy. The following extracts are found in the "table of reference" to the Yorkshire and Lancashire reports. "Overlookers very coarse and rough with the children." "Overlooker swears at the children and hits them on the head with a strap." "Tackler

[§ 759 (d.)] abusive and uses foul language." "Weavers' work "spoiled because the children are afraid to fetch the "tacklers."(1) "Children," said a male weaver, "deteriorate both morally and physically if sent to the "mills too young. They are obliged to listen to words "which it would be better for them not to hear." In his opinion children under 13 should be excluded from the mills altogether. On the other hand a Bradford employer denied that employment in mills had a bad effect on the moral character of the children, and two representatives of the Managers' and Overlookers' Society of Bradford denied either that the overlookers used bad language or that they permitted it in others.(2) In the textile industry in North Scotland where complaints were made as to the treatment of the children, the firms of Messrs. Baxter Bros., Cox, Grimmond, Smith & Co., Harry Walker & Co., were mentioned as employing children under especially favourable conditions.(3) It is obvious that the conditions under which children work in the textile industries, where they are very largely employed, vary considerably from mill to mill, but from the evidence as a whole it would seem that in most instances their general surroundings were undesirable for those of such tender years. The representatives of the women's Ropemakers' and Confectioners' Unions who gave evidence before the Commission spoke very strongly about the "disgraceful language" and petty tyranny of the foremen in some factories. "The foremen rule the factories. The "masters do not go into the factories sufficiently to "see how the girls are treated, and so it is really their "fault, for they do not know half what occurs through "the foremen and forewomen. . . . . The "language of the foremen towards the women and "girls is more than abusive, it is disgraceful in its "character, and it is so in almost all factories. We "hear not only in this trade, but in other trades that "we know of that we are closely connected with, "that the same thing occurs always."(4) Miss James on being asked whether the "gross impropriety" of the language complained of was not exceptional, replied "I am sorry to say it is general." Instances of petty tyranny were related. "The girls are entirely at the mercy of the foremen." "Supposing a girl loses five "minutes in the morning, or supposing she does not "get to her work till eight o'clock, the foreman can "give her a fortnight's drilling if he likes. That "means he can keep this girl out for a fortnight "without employing her. . . . . She will have "to go down to the factory each morning . . . . "to see if the foreman will take her on."(5) It was remarked that much of the good conduct of a mill depended upon the character of the overlookers. The tables appended to the reports on Yorkshire and Lancashire show that in certain mills where the overlookers or masters are men of bad character, the general tone is very low. It is in this connection that the evils connected with the so-called system of "favouritism" are found. In the textile industry in Yorkshire some few instances of immorality were traced directly to it and in the case of one mill where the moral tone was very low, it was said that "favouritism was very bad." Several witnesses in the tailoring trade at Glasgow complained that women workers were very much at the mercy of the "cutter" and "presser" as regards the amount and profitableness of the work given out to them in the various shops. One witness said she had been obliged to leave a shop where she was employed owing to the familiarities of the cutter. In consequence of her resenting this behaviour she was deprived of her fair share of the work given out. Cases of "favouritism" she said were common.(6) The obnoxious behaviour of officials has been the cause of more than one strike. A strike took place at a mill in Oldham against an overlooker who had been charged with immorality, but it was only after he had been found guilty in court that he was dismissed by the firm. Another strike occurred at Nelson in 1892. "It arose under similar circum- "stances to the last, but in this case the question of "guilt was decided by three clergymen who were "chosen as arbitrators, both sides agreeing to the "mode of settlement. The arbitrators after carefully "weighing the evidence found the overlooker guilty of "making immoral proposals to a married woman and "of using indecent language to other females." They included the following recommendations in their award. "It was with the deepest regret we learned during "the inquiry that the offences of which we have [§ 759 (d.)] "been compelled to adjudge Houghton Greenwood "guilty are not uncommon amongst men who have the "oversight of the female operatives in other mills, and "as ministers of religion we most earnestly appeal to "the employers of labour to practically recognise their "duty in this matter, and to seriously consider how "essential it is to the happiness and well-being of those "under their charge, as well as to their credit, to make "the moral conduct of their workpeople a subject of "nearer concern and greater importance." This award was printed and distributed at Nelson and it is believed to have created a marked improvement not only in the behaviour of overlookers but in the attitude of employers towards the question. Shortly afterwards a firm discharged an official for a similar offence.(1) It can be easily seen from the foregoing that a careless choice of the officials is the chief cause of these evils. Unless the employers are at pains to ensure that a good moral character is a necessary qualification for any official position such as that of overlooker, foreman, &c., the evidence showed that much unpleasantness and discomfort may be endured by the women and children who are under his control before resort is had to such a strong measure as a strike. Beyond the cultivation of a healthy moral tone and public spirit amongst the workpeople, so that any offences of this sort are instantly reported, it was asserted that the remedy for this kind of abuse lies solely in the power of managers and employers. In those cases where women overlookers or forewomen can be employed, difficulties of this nature were obviated, hence where this is possible it was stated to be the more desirable arrangement. Even where this is not possible, however, it was suggested that in all cases, where a certain number of women are employed, there should be a woman in a position of authority to whom all complaints concerning officials, health, sanitary arrangements, &c., could be brought in the first instance. The very natural dislike of women to approach men on these subjects was constantly brought forward by the witnesses. But were some carefully chosen women put into this responsible position, much of the danger and discomfort which is unavoidable under the present state of things would be removed, and some of the chief difficulties connected with the employment of women would also disappear. This system is already adopted in a few of the best regulated establishments. Thus, in the cocoa and chocolate works at Bristol, every department in which girls are employed is superintended by women. In the Bedminster cigar and tobacco factory, where large numbers of women are employed, the departments are superintended by men, but for the last few years a lady has held the post of matron, "the duties of which," it is said, "are "rather unique in factories. The names and addresses "of girls absent through illness are given her every "morning and they are visited by her. . . . Any com- "plaint that a girl may have to make can always be "laid before the matron and thus the more objection- "able features of supervision of women by men are "obviated."(2) A somewhat similar proposal was made by a married woman who had had large experience as an operative in textile factories. She suggested that in all mills where there were a number of employées it was most desirable that a woman attendant should be kept at the lodge. The witness stated that this would have been an immense advantage in the many cases of sickness occurring to workers which had come under her notice. She suggested that the provision of a woman attendant should be compulsory in all cases where a certain number of women were employed.(3) The position of barmaids is, of course, exceptional. It was stated before the Commission that there were "a number of typical cases" of girls who had been driven on to the streets by the conduct of their employers, and more commonly by the conduct of customers.(4) The Lady Sub-Commissioner who subsequently investigated the condition of barmaids does not refer to the subject. With regard to the subject of intemperance, it does not appear from the evidence given in her report that there are grounds for any general charge of this kind being brought against barmaids as a class. There is no doubt that the peculiar temptations of their position tell upon the character in some cases, but it was asserted that in good class houses unsteadiness would be fatal to a barmaid's prospects. The prevalence of intemperance amongst laundresses was alluded to by several witnesses.(5).

[§ 759 (e.)] (e.) Summary.

(e.) It would appear that the morality of women in various employments depends much less on the employment itself than on the general conditions of labour. Where the wages are very low, where the ordinary decencies of life are not observed in the surroundings; where men and women of a rough class work together without any discipline or supervision, where in fact some of the conditions of morality are wanting, the standard of morality amongst the workers is liable to be very low. Where wages are better, and due care is taken of the conditions of labour, the general surroundings, and the character of the official employed, no special complaints are made on the subject.

Various efforts to improve the condition of women workers.

760. Much is being done in various quarters to better the position or brighten the lot of the great number of women and girls engaged in various industries. Outside voluntary agencies, trade unions, and certain employers all take some share in this work. It is with the efforts of the first of these that this section is mainly concerned.

(a.) By outside voluntary agencies.

(a.) For example, it was observed that "as far as "public effort is concerned, it may be safely said that "in Birmingham, if any scheme can be proved worth "carrying out, it will be undertaken." The Ladies' Association for Useful Work in that city organises various courses of practical lectures on the laws of health, management of infants, and nursing. Another most successful society is the Letter Guild. A lady correspondent is found for any factory girl who wishes to have a friend to give her advice and sympathy through the post. Over 3,000 girls have applied for correspondents, and about 2,000 ladies have been induced to promise to write letters regularly to the girls allotted to them. "Of the various acts of kind-"ness by individuals, none seemed to have afforded "more pleasure than the hospitality of a private "person, who invited over 40 members of the Kyrle "Society to stay for a week, in detachments of 12 at "time, at a cottage in Conway, under the supervision "of two lady members. The visit had been paid six "months before, but one girl, a press worker, told me "that she still thought of it nearly all the time she "was at work; and two girls said they were saving "money to pay their fares to the same place next year."(1) At Manchester a peculiar and noteworthy sanitary organisation, called the Ladies' Health Society, was noticed. It works "in co-operation with the local "sanitary authorities. The working-class localities "in the city are divided into districts, to each of "which a working woman is assigned as a health "visitor. Each visitor is under the supervision of a "member of the Ladies' Health Society, and is "expected to visit the houses in her district, to make "friends with the women as far as possible, give hints "as to sanitary matters, report defective sanitation or "infectious illness, give practical aid when necessary "to sick persons, and to report to her superintendent. "Thirteen districts are now under supervision, and the "value of the services rendered through the society "has received official recognition, half the wages of "the visitors being now paid by the sanitary authori-"ties." Much valuable information is said to be obtained through this medium.(2) Evidence of clubs and classes of various kinds was given. In most cases these were of a purely social, religious, or philanthropic character; their chief aim being to brighten the leisure hours of the girls, teach them useful pursuits, and elevate their taste. It was said they did "most excellent work." There appears to be a clear line of separation between such institutions and any associations of which the basis is trade organisation.(3)

Openings for further voluntary work suggested by the Lady Sub-Commissioners.

In connection with voluntary agencies of this kind some further openings for outside philanthropic and social work, which were noted by the Lady Sub-Commissioners, might be mentioned. For instance, the extreme unsuitability of the dresses worn by the workers in the nail and chain industry in the Cradley Heath district was animadverted upon. "Instead of a "short skirt with a leathern apron to guard them from "the edge of the forge, comfortable broad-soled shoes "without heels, and a loose cool jacket, they wear the "worn-out Sunday frock, ragged, burned, and heat-"stained, tight stays, high-heeled shoes, and a bit of "sacking pinned over the skirt completing the untidi-"ness. When they are hot they loosen the throat of "the dress, and this increases the unseemliness of "their general appearance. A class for teaching the "simple rules of health, and a supply of suitable "garments at cost price, are schemes well worthy the "attention of kind-hearted ladies who wish to better "the condition of women in the Black Country." The possibility of uniting these women in any wholesome interest outside the daily drudgery of their lives was also discussed. One step in this direction had lately been taken by the institution of a cookery class at Oldhill, which is attended by between 200 and 300 women. This, it was thought, besides giving them a higher standard of home comfort, might be the means of drawing them together, and thus lead towards the creation of some kind of public spirit, which might eventually develop into trade combination.(1) It was remarked that at Bristol, in spite of "the very long intervals of leisure" of many of the workers, no special provision for the intellectual improvement of young men and women seemed to be made in the town. The so-called free library appeared to be a "collection of unreadable and worthless books."(2) "What is needed for working women in general," writes Miss Collet in "Labour and Life of the People," "is a more practical education in Board Schools, "greater facilities for the exercise of thrift, and definite instruction in the advantages and best methods of "saving. . . . And lastly, but not least, trade union "is wanted."(3) Various recommendations towards bettering the conditions of barmaids and waitresses were also made. It is stated that "nearly all the "employers and a good many of the barmaids and "manageresses agreed that what is chiefly wanted is "a well managed registry, at which reliable informa-"tion could be obtained (a) by employers as to the "character of the girls applying as barmaids, and (b) "by barmaids as to the nature of the place which "they propose to take. At present the newspapers "are the only means of communication between "employers and barmaids, and much dissatisfaction "is expressed by all concerned." It was said that a good scheme for a registry would receive support from all classes connected with the trade. Some system for certificates of character such as that adopted in France and Germany was suggested by a hotel proprietor but the Lady Sub-Commissioner did not think it would be workable. It was suggested that economical and comfortable holiday homes where girls could go for rest or in intervals of employment, established in healthy places as well as in large towns would be very valuable to barmaids and waitresses, and if well managed would be supported by some of the large employers. One witness, "a remarkably intelligent married woman who was barmaid and manageress for many years before marriage," urged the great necessity for some such home in Glasgow or in some place equally accessible from various holiday resorts in Scotland. Two such institutions already exist in London, the "Morley Home" and "Hartley House"—the latter, it was stated, was not sufficiently well known and hence it was not enough used by those for whom it was intended.(4)

Women's "settlements" in the poorer districts of London.

Apart from the work of the innumerable agencies connected with religious bodies, various efforts are made by "settlements" of educated women to improve the condition of the woman worker. The "Women's University Settlement" at Southwark "for work in the poorer districts of London" deals mainly with women and children. It is unsectarian and its work is chiefly educational and social. "The "work of the Settlement, in connection with labour "problems," writes the Warden, "is indirect and "rather preventive than remedial. We feel strongly "that the character and education of the people are the "most important factors in the solution of the problem, "and it is with these that we think we should chiefly "concern ourselves." An attempt is being made to give a systematic training to those who propose to devote themselves to work among the poor by means of a system of weekly lectures and a course of reading on the one hand, and practical work under other workers on the other. The ordinary course is to extend over one year and is framed with a view of giving an outline of general principles and methods. As the aim throughout has been rather to supplement existing agencies than to start new ones, work is done in connection with the Charity Organisation Society, the Metropolitan Association for Befriending Young Servants, the Children's Country Holiday Fund, the Invalid Children's Aid Association, and Board Schools. Clubs for girls, children, and pupil teachers, which are both educational and recreative in character are carried on. A Women's Benefit Society and a scheme for district nursing have

[§ 769 (a.)]

(1) p. 54. (2) p. 75. (3) pp. 14, 238–9.

(1) Group A., Minutes, Vol. II., Miss Orme, p. 575. (2) p. 31. (3) Labour and Life of the People, Vol. II., p. 476. (4) pp. 205, 210–11.

[§ 760 (a.)] also been started. One most successful enterprise has been a loan exhibition of pictures, which was attended by thousands of people.(1) The "Ladies' Branch of the Oxford House" provides a centre in Bethnal Green for religious, social, and educational work amongst women and girls in the surrounding poor parishes. The work is done in co-operation with the parish organisations, and in so far as it is religious is on Church lines. District nursing and district visiting are carried on, and clubs and classes religious, social and educational are held. Arrangements have been made for Technical Education Classes for club-girls with a view to raising them from the ranks of the unskilled to that of skilled workers. An effort is also being made with the help of the Women's Trade Union Association to instruct the factory hands in the clubs in such parts of the Factory and Workshop, and Truck Acts as concern themselves. Work is also done in connection with the Charity Organisation Society and with the Metropolitan Association for befriending young servants.(2)

(b.) By trade organisation.

(*b.*) What has been done by women workers themselves to improve their industrial, and hence their social condition through trade organisation is shown in the section that deals with that subject. It will be seen that although the movement is in its early stages, and although immense difficulties have been encountered, a very creditable record has been already made. Wages have been maintained or raised, hours reduced, sanitation improved, obnoxious officials removed, and flagrant abuses of various kinds have been remedied. It is to this method of self-help that the promoters of the movement chiefly look for the gradual but permanent improvement in the condition of labour of women workers. [§ 760 (b.)]

(c.) By employers.

(*c.*) Much again has been done in some instances for the woman worker by the employer. It has already been shown incidentally under various headings that certain employers have spared neither expense nor trouble in providing everything necessary for the health and comfort of their women workers—whether appliances for good methods of ventilation and sanitation, the provision of cloak-rooms, dining-rooms and cheap food, libraries and other provision for recreation, or sick benefit clubs and convalescent homes. Detailed accounts of such model factories and establishments can be found in the pages of the different reports of the Lady Sub-Commissioners.(1) Where these ideal conditions are found, the relations between employers and employed are naturally of a most harmonious character and the need of trade organisation is not felt in the same manner. But the cases of employers who are thus alive to their responsibilities with regard to the women workers appear to be comparatively few and far between, and the lot of numbers of working women who are not reached by any voluntary philanthropic agency, who are as yet untouched by organisation, and who are at the mercy of indifferent if not unscrupulous employers —of whom the evidence gives only too many examples—is pitiable indeed. In such cases the Report points out that remedies are to be found mainly in a rigorous enforcement of the extreme powers of the law through an improved administration, and possible extension, of the Factory Acts, the development of trade organisation, and the awakening and pressure of public opinion.

B. ORGANISATIONS.

THE GENERAL QUESTION OF ORGANISATION.

Necessity for women's trade associations.

761. It has been stated that trade association is necessary as a remedy for the many serious evils attendant on the present conditions of the employment of women.(3) So long as the women are unorganised they are practically at the mercy of their employers, and in cases where the latter are unscrupulous they have no means of resistance.(4) Even when the employers are willing to do all in their power for the welfare of their workers, the interests of both capital and labour are, it is said, advanced by trade associations. For example, "the chief "source of difficulties between employers and workers "in the textile industry in Glasgow is apparently the "want of a declared and uniform rate of wages for the "same work throughout the trade. Those employers "who desire to give a just wage have stated that they "find themselves handicapped by the action of the "others. On the other hand, the workers, having had "in the past no organisation strong enough to combat "this evil, and no centre to appeal to for support, or "even for accurate information as to current rates, have "in most cases been obliged to submit, while employers "who wished to pay their workers justly found them-"selves obliged to reduce wages in order to compete "successfully in the same market with others." (5) Now that women compete with men in the majority of the manufacturing trades, it appears necessary for the good of both sexes that women, like men, should be organised. Thus, in Scotland, it was noted that in the spinning industry women's labour was both "cheap and unorganised," while in England, where women as well as men are highly organised, it is comparatively well paid.(6). "It is palpably an injustice that women "should be compelled to accept lower wages than are "obtained by men for the same amount and quality of "work; . . . but there is no help for it while women "find that they have to contest for work with an orga-"ganised and federated body of men, who have already "filled even those trades which are naturally and "specially suited for women's labour."(7) Further, "the damage done to the interests of working men by "the undue cheapness of women's work is evident. "Work of all sorts tends more and more to pass into "the hands of women, not because they do it better, "but because they do it more cheaply. The more men "are thrown out of work, the more essential it "becomes for women to support themselves and their "families. . . . The raising of women's wages to a "level with the wages of men is the change which at "this moment is most urgent, in the interests of men; "and, since the only agency which has hitherto pro-"duced any serious effect in raising the wages of "men has been combination among themselves, it "seems a fair presumption that an equal degree of "combination among women would produce like "results upon their wages."(2) The evidence showed, however, that working men have now learnt the advantage to themselves of women's associations, and are in many cases doing all in their power towards organising the women in their own trade. Most of the women's societies owe much to the aid granted them by the men's unions during the first few years after their establishment. In addition to the societies which consist of women alone, there are a large number, especially in the textile trades, which consist of both men and women. The most important of these mixed associations in the textile trades are the Northern Counties Amalgamated Association of Weavers, the West Riding of Yorkshire Power Loom Weavers' Association, the Alva Society of Associated Weavers, the Amalgamated Association of Card and Blowing Room Operatives, the Amalgamated Association of Operative Cotton Spinners,* the Scottish Mill and Factory Workers' Federal Union, together with the various societies affiliated to the above, and the Leicester and Leicestershire Hosiery Union. Women are also members of a number of societies in other trades. Such are the London Domestic Servants' Union, the National Union of Shop Assistants, the Midland Counties Trades Federation, the National Union of Paper Mill Workers, and the National Union of Gas Workers and General Labourers. But in these, although women are in several cases in the majority in point of numbers, they are rarely on terms of equality with the men. Generally speaking, they pay a lower rate of contributions, and receive a correspondingly lower rate of benefit. In most cases, also, they take only a subordinate part, if any, in the government of the society. Thus it has appeared best to treat here only those which either consist exclusively of women, or are mainly governed by them. The question has

* It was stated before the Commission that this Association consisted exclusively of men (Group C., Minutes, Vol. I., 708), but from the Answers to the Schedules of Questions (p. 99), it appears that the Oldham branch includes 7,000 women.

(1) pp. 34, 35, 69, 101, 160, 186, 187, 191, 192, 207, 209, 290, 291, 309, 310, 331, 332, 348, 351. (2) Women's Trades Union League, Report, 1888, pp. 4, 5.

[§ 761.] arisen as to whether it is advisable to combine men and women in one union, or to establish separate societies for the two sexes, affiliated to one another, but distinct in constitution and management. Up to the present time, it is evident that mixed societies of men and women have far more stability than those which are for women alone.(1) But the independent organisation of women has not yet reached a stage at which it can be definitely determined whether the reasons for the weakness of women's unions are of a character which cannot be overcome, or whether they are not really of a merely temporary nature.

Difficulty of organising women.

762. In addition to the obstacles which all trade associations have had to overcome in the first stages of their development, many difficulties are presented by the peculiar conditions under which women work. It will be convenient for the present purpose to class them under three main heads:—Economic difficulties, which are due to the conditions of employment in trades where women are largely engaged; difficulties arising from hostility or indifference on the part of employers, other individuals and associations; certain difficulties caused by the educational deficiencies of working women, and the intellectual and moral effects which result therefrom.

(a.) Economic difficulties.

(*a.*) One obstacle is the low rate of wages which has been shown to be paid in most industries where women are employed. This makes it impossible in many cases for them to spare anything from their "starvation wage" as contribution to a society, much less to support themselves even for a short time during a strike.(2) "With workwomen, as with workmen, the less hardly "worked, and the less hardly paid, must lead the way "in trade organisation."(3) The enormous amount of competition which prevails in many industries, especially in those where a high standard of skill is not requisite, is another difficulty. The knowledge that in the event of their combining to obtain improved conditions of labour, their place can easily be filled by another, keeps many women aloof from organisation.(4) In the upholstery trade it is stated that, "there is some "objection on the part of many of the women to belong "to societies, because they have got an idea that they "will be dragged into strikes, and they have a great "objection to anything of the kind."(5) This is especially the case, however, in the less skilled trades, and those where home workers are employed. "Unskilled labour," writes Lady Jeune, "will always be the great difficulty "to be met by any combination to raise the wages of "women workers, and the sick children, the unemployed "husband, the cold and fireless homes, will always be "the greatest bar to any effort to persuade women to "stand together for better remuneration.(6)" For example, in an umbrella-covering firm in Scotland, the employer "has in several instances met the demands of "his employées for an increase of wages by the state-"ment that he is quite independent of his inside "workers, and if they do not accept his terms he can "get it done by the outside hands at his own price."(7) It is further stated that homework makes trade association among the workers impossible. "Under "this system of employment there exist no centres in "which a public opinion with regard to wages can be "formed, and in which organisation may originate and "spread."(8) But it is not only the home workers that are debarred from organisation by their isolated position. The same is the case in an almost equal degree with domestic servants, shop assistants, barmaids, waitresses and many other classes of women workers. "The custom of meeting together, in the "evening, at public houses, and the accommodation "offered by these places, have given working men "certain facilities in forming their societies."(9) But working women have very few opportunities of meeting in this manner. "The isolation of many working "women's lives is something which few people of "another class realise."(10) One of the Lady Sub-Commissioners states that the organisation of barmaids and waitresses is very difficult, owing to their isolated position, and a witness before the Commission went further, and declared that it was "absolutely impossible "to organise them as they are at present."(11) The custom of residence on their employers' premises greatly [§ 762 (*a.*)] increases the isolation of domestic servants, barmaids, and shop assistants. The long hours worked in many cases also hinder the development of trade associations, as the women have but little time to spare for attending meetings and otherwise entering into the work of their union.(1) Thus it is said with regard to shop assistants, that "the long hours of employment, and residence on "the premises of their employers, make association for "trade purposes difficult even when desired."(2) In the case of the Leeds Tailoresses' Society, established in 1884, it was stated that "a certain amount of outside "help seems to be required by the tailoresses, as their "hours of work are at present too long for them to "devote much time to the business of the Society."(3) The same difficulty is brought forward in many other cases. "A working woman of the East End has to get "up in the morning to go to work, and she works till "she goes to bed at night; she has no time to think "at all."(4)

(b.) Opposition and lack of sympathy.

(*b.*) Although in some instances employers have encouraged their workers to organise themselves, in most cases their actual hostility is complained of as a great hindrance in the formation of trade associations. Many workers state that they have been dismissed from their employment merely because they had joined a union.(5) Women, generally speaking, are also "more "easily dealt with" by their employers than men are. They are "far more fearful of dismissal from a tolerably "good situation."(6) At a meeting held at Walsall in 1888 to establish a women's union, although every hand went up in favour of the resolution, "two young women "only had the courage to give in their names."(7) Similar evidence was given with regard to the Rope-makers' Union. "I know of one firm in the East End, "where the employer told his women distinctly that if "they joined the Union he would sack every one of "them, if he had to shut up his shop." The East London Confectioners' Union "broke up" six months after its establishment, "because the girls were afraid "to belong to the Union, the masters were dismissing "them."(8) At Sheffield between 300 and 400 women joined the Gas Workers' and General Labourers' Union in 1890, but were forced to withdraw from it in consequence of the hostility of their employer.(9) The decrease from 500 to 100 in the membership of the Manchester Shirt Makers' Union was attributed by the secretary "in great part to the difficulty of collecting "money. The collectors were often afraid to do it in "the factories, owing to the discouragement of the "managers."(10) In her evidence before the Commission, Miss James, the secretary of the East London Confectioners' Union, said, "I went to one factory—I was "distributing bills, and asking the girls to come to "a meeting—and the master came out to me and said, "'My girls are treated properly, but if I catch any of "'them coming to your meetings I will dismiss the lot "'of them.'"(11) Apathy is stated by one of the Lady Sub-Commissioners to be the chief cause of the small success of women's associations in Bristol. "Resigna-"tion to things as they are seems to be equally "characteristic of employers and employed, and the "causes of complaint in Bristol are not so much things "done as things left undone."(12) In some few cases the attitude of the men's trade unions towards the women workers is decidedly hostile. Some societies, for example, the United Society of Brushmakers and the Scottish National Operative Tailors' Association, have rules which forbid their members to teach, help or work with women.(13) It is true that this opposition on the part of the men's associations has greatly diminished of recent years. Thus with regard to the Scottish National Operative Tailors' Society, it is stated that the rule forbidding members to help women has never been strictly observed, and the members of the Tailors' Union now take an active part in the work of organising the women.(14) It will be seen below that the majority of the women's associations have been formed with the assistance of the men in the same or even in different trades. At the International Workers' Congress, held at Paris in 1889, it was unanimously decided that "The Workmen's Party in all countries should "pledge itself to promote the formation of trade "organisations among the workers of both sexes."(15)

(13) Introduction to Tabulated Rules, p. xx. (14) p. 269. (15) Women's Trades Union League, Report, 1890, p. 7.

[§ 762 (b.)] Still, in spite of this change of attitude, it is stated that in some cases women are afraid of the help offered by the men's unions, and fear that their advice may not be altogether disinterested.(1) Another difficulty arises from the fact that "the larger associations of "workers who manage homes and clubs for working "girls on a religious basis, and do most excellent work, "succeed in influencing a larger number of these girls "than any other organisation in London, and in the "majority of cases their attitude is hostile to trade "unionism, or any movement which seems to them to "stir up antagonism between the girls and their "employers. They aim at teaching the girls to "conscientiously perform their duties to those in "authority over them, and look with disfavour on "agitation which seems to them to have only material "and intellectual progress as an end."(2) It is also stated that women's unions sometimes suffer from the want of interest shown in the matter by the home circle.(3)

(c.) Other difficulties.

(c.) In addition to the difficulties enumerated above which may be termed "external" difficulties, many are largely due to the present imperfect education possessed by the majority of the women and are therefore merely temporary.(4) Difficulties of this kind are not peculiar to the attempt to organise women, but are found equally in all endeavours to organise unskilled labour. Considering the early stage in which women's unions are still, it is not surprising that they have not yet been completely overcome. Hence we find that the failure of the Laundresses' Union was ascribed mainly to "impatience and lack of "education" among the members.(5) On the other hand, statements have been made which point to the conclusion that the requisite moral qualities are not wanting. Thus it is stated that "of all the unions "originated and conducted by women, I can say "truthfully that I have never known a case of wilful "betrayal of trust; I have never known a case of real "dishonesty. What I have known is disastrous "betrayal of common interests from sheer ignorance. "This is the seamy side of trade unionism for women. "This is the great stumbling block in the way of our "work."(6) Attempts are, however, being made to remedy this defect. One of the objects of the Trades Union League is to develop business habits and knowledge through the work of the societies, and a great improvement in this direction has already been made. When a society has once been fairly started, women have almost always been found who were capable of carrying on the management. From the fact that the Bookbinders' and Shirtmakers' Societies, two of the oldest and most successful of women's organisations, are now managed entirely by women, it is clear that business habits are to be found among working women and that they only need careful development.(7) The sensitiveness of some classes of women to social distinctions, is a weakness which time and education will also cure. One of the attractions of certain trades is the social position they are supposed to confer. Women employed in the various departments do not in all cases willingly associate with one another. Thus, milliners are stated to regard themselves "as belonging to a "higher social grade" than dressmakers. There seems to be another social division between skirt and bodice hands, although "not so clearly marked as that between "milliners and dressmakers, and between resident and "non-resident employees. These social differences all "stand in the way of trade association. It is not the "custom to discuss wages and salaries together, and "shop assistants are especially reluctant to mention "their salaries in the presence of others."(8) In the same way, the organisation of shop assistants and barmaids is hindered by the fact that the women choose their occupation as likely to afford them a higher social standing, or more variety, than many others which are better paid. (9) Barmaids, it is stated, "are about the "worst material for organisation to be found "anywhere. . . . . They do not invariably choose "their work because it is profitable, but generally "because it is pleasant, and in accordance with their "tastes."(10) Another inherent difficulty that is often brought forward is that in very many cases women expect to marry after a few years, and do not trouble so much about obtaining better conditions of labour as they would if they thought of spending their lives in the same occupation. The failure of attempts to improve the organisation of women workers in Aberdeen is said to be due to this fact.(1) It is stated that "the "majority of shop assistants look upon marriage as "their one hope of release, and would, as one girl "expressed it, 'marry anybody to get out of the drapery "business.'"(2) They forget, said the general secretary of the Scottish Shopkeepers' and Assistants' Union, that "if they are the means of reducing wages, they "affect their own prospects of future improvement, "whether they are married or not."(3) Again, the failure of women's unions is sometimes due to inability on the part of the members to grasp the real object for which they are formed. In several cases, members of trade associations have fallen away as soon as they have gained any advantage from their society. For example, the Female Brushmakers' Union in Glasgow succeeded in inducing an employer to "take back half the "proposed reduction. As a consequence of this action "on the part of the Union, all the employées in this shop "joined the society, but after continuing in it for a few "weeks they lapsed into their former unorganised "condition. A month or two after the girls had fallen "away from the union the firm imposed the full "reduction."(4) With regard to the Liverpool Tailoresses' and Coatmakers' Union, it is stated that "as soon as the "reduction of hours had been granted, the number in "the union began to diminish. The stewards cannot "get the women to pay up."(5) Most of the difficulties that have been detailed can be summarised under one broad head—want of public spirit, the causes of which are not far to seek. The naturally dependent position of many women and the pressure of their circumstances render them in many cases peculiarly susceptible to external influences both economic and social. The slow process of experience and education alone can overcome these difficulties. This, however, is only one side of the picture. The succeeding sections will show that in some cases working women have been found capable both of forming and managing associations, and in other cases if they have been helped to form them in the first instance, they have shown the utmost courage, self-denial and perseverance—in a word public spirit—in carrying them on.

ACCOUNT OF INDIVIDUAL ORGANISATIONS.*

History and extent.

763. In some of the textile trades women have for many years been members of the men's unions, but the first step in the direction of organising them independently was taken in 1874, when a conference was held in London to discuss the feasibility of forming a national union of working women. It was decided that it would not be advisable in the first instance to endeavour to form a national union managed by a central body, but that it would be preferable to promote the formation of separate societies in the various trades, keeping in view the ultimate federation of the different societies. As the outcome of this conference, a committee was formed, which was first known as the "Women's Protective and Provident Committee," and later as the "Women's Protective and Provident League." In 1888 the name was again changed to "Women's Trades Union Provident League," and since December 1890 it has been finally known as the "Women's Trades Union League." The objects of this League are purely propagandist; it seeks to spread a knowledge of the principles of trade unionism among women, and to organise societies in various trades, whilst leaving them as far as possible to conduct their own management. It is, in short, a society for the establishment of trade unions, but not in itself a trade union. In 1890 a scheme was put forward to provide for the affiliation of existing provincial societies to the League. The proposed conditions of affiliation then adopted were that the society must be registered under the Trade Union or Friendly Societies Acts, must admit women as members, and pay a small annual subscription in proportion to its membership. On these conditions the League guaranteed that a delegate should visit annually each affiliated society, and undertook to send a representative to assist in the settlement of trade disputes in which women were concerned. At the present time the League has affiliated to itself a number of societies, many of which admit both men and women to membership. The total number of women in these societies is 45,000, and

* As already stated, this section deals only with those Unions which either consist exclusively of women or are mainly governed by them.

(1) Letter from W. Johnston, 25th Oct., 1893. (2) p. 89. (3) p. 314. (4) p. 275. (5) p. 70, Cf. Group C., Minutes, Vol. I., 8037.

[§ 763.] includes members in all parts of the United Kingdom.*(1) Shortly after the conference which was held in London, and at which the League was instituted, a similar meeting was held in Bristol, at which the scheme of a National Union of Working Women was adopted, and an executive committee elected. Attempts were made later to form branches of such a union in South Wales, and in Staffordshire, but in spite of all efforts on the part of its promoters, the attempts proved a failure, chiefly because working women could not be found who were able to carry on the management of these societies. The only survivor of the movement is the Bristol Association of Working Women, which was at its formation intended to be a branch of the National Union. The first three secretaries of the Bristol Association were members of the men's trade unions, which strongly supported the movement. A considerable number of women joined the association, and for several years there appeared to be every hope of success. But, for various reasons, the membership has been greatly reduced in recent years, and although in 1890 there was a temporary revival, when the rules were remodelled, at the present time the association is far from being in a flourishing condition. In 1891 the balance in hand was only 32*l.* This comparative failure is attributed by the secretary partly to the fact that many of the members prefer to belong to clubs and other societies for sick and funeral benefits only, while others have been unable to continue the payment of subscriptions. But the chief cause is stated to be apathy on the part of the women themselves, and the fact that so far "there has never come forward a really able "working woman to be the leader of the rest." Still, in the words of the secretary, the Bristol Association "may boast that the work of organising working women "was attempted and carried on by it, with varying "success, in the days when the movement was in its "infancy and difficulties and prejudices against it were "many."(2) Two months after the London conference, the League, with the assistance of two of the men's unions, established the Society of Women employed in Book-binding. The secretary states that this society has "gone on steadily." Nearly 1,000 members have been enrolled, but "we can only reckon on 257 paying "members; women often leave the trade, and then "give up the society." The amount paid for sick and out-of-work benefits during the past year was nearly 60*l.*, and the balance in hand is over 300*l.*(3) In December 1874 the stitchers and seamers in the hosiery trade in Leicester and the surrounding district were organised, and a few months later, during a strike against a reduction of wages, a union of weavers was formed at Dewsbury. These last associations were established independently of the League, which until July 1875 confined its work to London. The Dressmakers', Milliners' and Mantlemakers' Society, the Hat Trimmers' Society, the Society of Women employed in the Upholstery Trade, and the Shirt, Collar and Underlinen Makers' Society were instituted by the League in 1875. For three years the Dressmakers', Milliners' and Mantlemakers' Society had little success. The confidence of the women employed in the trade had been shaken by the collapse of a benefit union which had been formed some time previously, and which had been ruined by the dishonesty of the man who acted as secretary. In 1878 the Society was dissolved, but it was immediately reconstituted and had soon enrolled 33 members. In 1892 the membership was reduced to 20.(4) Aid was "readily and cordially granted" to the Upholsteresses' Society by the men's union in the same trade, and it soon numbered about 140 members, but many fell away for various reasons, and in 1891 the membership was stated to be reduced to 41.(5) The secretary of the Shirt, Collar and Underlinen Makers' Society states that, although the membership is very small, "what there are are good paying members."(6) About 10*l.* were paid for sick, funeral and out-of-work benefits in 1892, and the funds at the close of the year amounted to 49*l.*(7) Early in 1876 the Sewing Machinists' Society was established in London, and shortly afterwards an organisation was formed among the Manchester workers in the same trade. The London Tailoresses' Trade Union was next instituted in May 1877, and within a year had enrolled "upwards of 70 members." Two years later a branch was started in Westminster and Pimlico, in the hope of obtaining a redress of abuses in the Royal Army Clothing Factory. Within two months this branch numbered 170 members, but in 1891 the membership had fallen to 84 and the funds only amounted to 26*l.*(1) The East London Tailoresses' Trade Union and the Journeywomen Cigar Makers' and Worsted Spinners' Unions at Leicester also date from the year 1879; the formation of the Leicester societies was mainly due to the members of the Trades Council and of the men's Cigar-makers' Society. In 1881 the Protective and Provident Society of Women working in Trades in Oxford was formed, and was at once joined by "about 60 members." At the close of 1892 the number of paying members was 80, about 38*l.* were paid in sick and out-of-work benefits during that year, and the balance in hand was 142*l.* The Society includes embroideresses, dressmakers, shirt-makers, tailoresses and makers of underclothing.(2) In 1882 the Liverpool Tailoresses' and Needlewomen's Society was formed, and in the next year the Portsmouth Stay Workers' Society and the Oxford Working Women's Benefit Society. The latter was intended to include domestic servants, and, if practicable, to extend beyond the district of Oxford. An attempt was also made to organise women nail-makers, but the attempt apparently resulted in failure. In 1884 tailoresses' societies were formed at Glasgow and Leeds, with the assistance of the men's unions, but both were shortly afterwards dissolved. The failure of these associations was attributed chiefly to the fact that "the members "of the societies did not take an active part in the "management, but trusted almost entirely to the help "of the men connected with the branches of the tailors' "societies." The Aberdeen Workwomen's Society was established in the same year with the assistance of the Trades Council, which gave "precisely the kind "of help that is most valuable; not endeavouring to "manage the women's society, but always being ready "with words of advice and encouragement." This Society at a later date admitted men to membership, and was called the Workmen and Workwomen's Society. It has now been merged into a branch of the Forfar Federal Union, and numbers 130 members. It is stated that the work of the Society "for some years "back has been more that of a sick society than one "for purely trade purposes."(3) In 1885 the Dundee Mill and Factory Operatives' Union was organised, after a strike against a reduction of wages. Its formation was mainly due to the Rev. Henry Williamson, who continues to act as president. The Union includes workers in Montrose, Arbroath, Blairgowrie, Perth and Barrow-in-Furness, as well as in the immediate neighbourhood of Dundee. In 1891 the total membership was 5,945, only about 12 per cent. of whom were men.(4) Soon after the institution of the Dundee Union a similar society was started at Forfar, but in this the proportion of men is far greater than in the Dundee Union, and it appears to belong to the class of mixed associations rather than to that of women's societies. The Dundee Union, on the other hand, reported in 1888 that it was "mainly supported "by women, and could be managed by them if they "cared to make the effort. Meanwhile, we are getting "more and more women to act on the committee." In 1886 the Amalgamated Felt Hat Trimmers' and Wool Formers' Association was established at Denton. Two years later the Scientific Dress Cutters' Benefit Society was instituted, and within three months 68 members had been enrolled. The Society of Chelsea Seamstresses, and the Women's Protective and Provident League at Glasgow also date from this year. The Glasgow League was instituted by members of the Trades Council, with the help of private persons, and it is stated that it now numbers about 1,000 members* engaged in various trades, including weavers, tailoresses, umbrella makers, dressmakers, polishers, confectioners and biscuit packers. At the end of 1892

* A society, known as the Trades Union Association, which has similar objects to those of the League, has been established in London, where its work is mainly carried on in the East End. It appears to be entirely conducted by working women, but no details respecting it have been obtained. Support is granted from the funds to any woman discharged solely for joining a union, but no part of the funds is devoted to strike purposes. Group C., Minutes, Vol. I., Mrs. Hicks, 8309–14. The "Times," 13th December, 1893.

(1) "Women's Trades Union Review," October 1893, p.15. (2) Letters from Miss Talbot (28th October 1893; 24th November 1893). (3) Letter from Miss Whyte (23rd October 1893). (4) Information furnished by the honorary secretary. (5) Group C., Minutes, Vol. I., Miss Mears, 8096. Answers to Schedules of Questions, p. 853. (6) Letter from Mrs. Houlton (23rd October 1893). (7) Report of Shirt Makers' Society, 1892.

* It must be noted that in 1891 the membership was only 450. Group C., Answers, &c., p. 857. Thus there appears to be some discrepancy in the two accounts, otherwise the membership must have doubled within two years.

[§ 763.] the funds amounted to about 200*l.*(1) As a result of a severe strike at Messrs. Bryant and May's factory, the Union of Women Matchmakers was formed in July 1888, with the assistance of the League. More than 500 matchmakers at once gave in their names. A few months later, "with a view of improving the "position of the women, and preventing their labour "being used as a means of lowering the men's "remuneration," the Cigarmakers' Mutual Association, with the help of the League, organised the women workers in London. In 1890 the women's union was "over 560 strong, and increasing rapidly."(2) During 1888 unsuccessful attempts were made to form a tailoresses' union at Leicester, and to organise the women engaged in the saddlery trade in Walsall.(3) Several societies date from the year 1889. In January the Liverpool Tailoresses' and Trousermakers' Association was formed, and "on the first pay night 30 or 40 "paid the entrance fee." "The numbers rose to 150 "during the year, and to 200 later on," but in 1892 the membership had fallen to 20 or 30.(4) The Leeds Tailoresses' Trade Union was started as the outcome of a strike in Messrs. Arthur's factory. About 2,000 girls were almost immediately enrolled, and the secretary states that at the present time "the society is working "very favourably."(5) The Shirt and Jacket Makers' Society at Manchester also "commenced in 1889, and "has struggled on through many difficulties up to "nine months ago." The name was then changed to the Manchester and Salford Federation of Women Workers, "representing eight different trades. Its "members number about 300 at the present time, though "at one time the shirtmakers alone numbered about 500, "afterwards falling away to a little over 100."(6) The last annual report of the Society shows a balance in hand of nearly 90*l.* The Amalgamated Society of Laundresses and General Working Women was* instituted in the same year. In 1891, at the time of the agitation for the extension of the Factory Acts to laundries, a large number of laundresses were enrolled and nine branches formed. Shortly afterwards, however, the majority of the members fell away, and the society was dissolved in July 1893.(7) The East London Ropemakers' Union, which also includes members of the jute trade, numbered about 260 members in December 1891, out of about 1,000 ropemakers and 1,500 jute-workers. The Matchbox Makers' Union, the East London Confectioners' Trade Union, the Society of Women employed in the Hosiery Trade at Nottingham, the Edinburgh Women Workers' Federation, the Liverpool Tailoresses' and Coat-makers' Union, and three societies in the textile trade at Belfast were all established in the year 1890. An attempt was made in the same year to organise the tailoresses and corset makers at Ipswich, and, with the assistance of the Trades Council, a society of girls engaged in glass works and tobacco factories was started at Newcastle with a membership of 81. The East London Confectioners' Union was instituted during a strike for the abolition of fines and the reinstatement of a worker who had been unjustly dismissed. In December 1891 it numbered about 500 members out of about 3,000 women in the trade.(8) A week or two later one of the largest employers "dis- "missed 40 of his oldest and best, all union girls: he "gave no reason except that he was not going to have "any Union in his firm. . . . The other girls remained "in the Union till they were watched to the Union "Office and Girls' Club by a man . . . employed as "'searcher' to the factory and also to follow the girls "to their club. The girls were at last afraid of being "seen, and gradually dropped out of the Union." It was dissolved in August 1893.(9) The Society of Women in the Hosiery Trade at Nottingham began with a membership of 200, and soon numbered about 300 members. The Edinburgh Women Workers' Federation was started by the Trades Council, under the title of the Female Workers' Association. It began "with a membership of almost 90, which, "however, fell off to 30 or 40." In 1893 it was "taken in hand by a committee of the Independent "Labour Party," and now includes 50 or 60 members.(10) The Liverpool Tailoresses' and Coatmakers' Union was formed during a strike for reduction of hours. About 260 women joined at first, but "as soon as the reduction [§ 763.] "of hours had been granted, the numbers in the Union "began to diminish." In 1892 there were about 100 members, only 40 or 50 of whom were entitled to benefit: it is stated that "the stewards cannot get the women to "pay up."(1) The Belfast Societies of Spinners, Preparers and Reelers, the Weavers, Warpers and Winders, and the Warehouse Workers were established by the League, with the assistance of the Belfast United Trades Council, but were all dissolved within a year.*(2) Several societies were formed during the year 1892. A union of straw plaiters at Luton was established early in the year, with 72 members; shortly after, three societies for women potters were started at Burslem and Hanley in Staffordshire, and the Union of Women Silk Workers was formed at Leek. The Hanley Society, which is called the North Stafford Branch of the Women's Trades Union League, was established by the League, with the assistance of private persons. It has now enrolled from 200 to 300 members.(3) The Nottingham Tailoresses' and Machinists' Trade and Sick Benefit Society dates from October in the same year.(4)

Form of government.

764. The rules of 15 societies of women have been received. The government of these societies is in all cases in the hands of a committee. The number of members in the committee varies in the different associations, and, with one exception, it is always specified in the rules that they must be "women in the "trade." In addition to the committee, a president, secretary and treasurer are generally appointed, and the larger societies have from one to three trustees and one or two auditors. The sex of these officers varies in the different unions: in several cases one or more posts are filled by men, but the principal work is usually done by women. The officers and members of the committee of the Felt Hat Trimmers' Association are all men, whereas the trade is confined to women. A consultative committee, which includes persons who are not members of the society, is elected by the Bristol Association, in addition to its executive committee, which consists of members only. All officers of the Association are ex-officio members of the consultative committee. The committee of the Dundee Mill and Factory Operatives' Union, of which the Rev. Henry Williamson is president, "consists almost entirely of "the female workers"; the secretary is also a woman, and the treasurer is a working man.(5) In a few cases the officers and committee receive some remuneration. Two or more members of the committee usually meet weekly for the transaction of minor business; more important questions are brought before the monthly meetings of the whole committee. Quarterly, half-yearly and yearly meetings of the members are held, at which the decisions of the committee may be revoked. Special meetings of the committee can be summoned when necessary, and the committee is empowered to call a special general meeting on the request of a specified number of members. Officers can be removed and ordinary members expelled by the vote of a general meeting. In four cases the president has a casting vote at meetings of the society, and in one case a deliberative vote also.

Conditions of membership; income and expenditure.

765. In most cases the age is specified at which women are eligible for membership in the societies. The usual limit is "16 years and upwards," but the Denton Hat Trimmers admit members between the ages of 14 and 60, and the Dundee Mill and Factory Operatives' Union only requires that they must be over 10 years of age. The rules of the Leeds Tailoresses' Trade Union and the Edinburgh Women Workers' Federation do not mention any limit of age at all. Candidates must generally be recommended by two members, who vouch for their competency. The Scientific Dress Cutters' Society also requires a certificate of health, and new members of the Bristol Association may be compelled to undergo a medical examination. The entrance fee ranges from 3*d.* to 5*s.*, but is generally 1*s.* In most cases it can be paid by weekly instalments. In the Scientific Dress Cutters' Society, the Society of Dressmakers, Milliners, and Mantlemakers, and the Bristol Association of Working Women it varies with the age of the member. No fee is mentioned in the rules of the Nottingham Society of Women in the

[§ 765.] Hosiery Trade. Members who temporarily leave the trade and withdraw from their society are generally re-admitted without further payment within a specified period after they have resumed work. The contribution is usually 2*d.* or 3*d.* a week, but varies in a few cases according to the age of the member, or the benefits to which she desires to be entitled. The committee of the Edinburgh Federation can raise a levy at any time when necessary, and in several cases a levy is raised on the death of a member who is entitled to benefit. Members who allow their contributions to be in arrears for more than a specified period are generally fined a small sum and suspended from benefits until a certain time after they are clear on the books. If they do not reduce their debt within a stated period they are liable to expulsion. In the case of members who are unable to pay, owing to sickness, want of employment or other good cause, the amount which they owe is usually placed to their credit. Generally speaking, members are not entitled to any benefit until they have paid their contribution regularly for a certain period, when they are termed "free" members. The total number of benefits granted by the 15 associations which have forwarded copies of their rules is 44, as shown in the table below. [§ 765.]

Table of Benefits allowed by Women's Trade Associations.

	Dundee and District Mill and Factory Operatives' Union.	Society of Women employed in the Hosiery Trade. (Nottingham.)	Leeds Tailoresses' Trade Union.	Nottingham Tailoresses' and Machinists' Trade and Sick Benefit Society.
Out-of-work benefit	Aid is granted at the Committee's discretion to members out of work through the breakdown of machinery.	—	Members contributing 1½*d.* a week, 4*s.* a week; members contributing 2½*d.* a week, 6*s.* a week.	—
Sick benefit	—	—	5*s.* a week for four weeks, then 2*s.* 6*d.* a week for four weeks.	Members contributing 3*d.* a week, 8*s.* a week for four weeks; then 4*s.* a week for four weeks.
Funeral benefit	After one year's membership, 10*s*, and 5*s.* for each additional year, to the amount of 3*l.*	—	A levy of 3*d.* a member is raised on a member's death.	—
Dispute benefit	Support is granted by the Union, unless the funds are below 50*l.*	8*s.* a week for six weeks, then 6*s.* a week for six weeks.	Members contributing 1½*d.* a week, 7*s.* a week; members contributing 2½*d.* a week, 10*s.* a week.	10*s.* a week.
Accident benefit	Not more than 4*s.* a week for five weeks, as the Committee may determine.	—	The same as sick benefit	—

	Scientific Dress-cutters' Benefit Society. (London.)	Society of Dressmakers, Milliners, and Mantle-makers. (London.)	Society of Women employed in Shirt, Collar, and Underlinen making.	Felt Hat Trimmers' and Wool Formers' Association. (Denton.)
Out-of-work benefit	Members contributing 2*d.* a week, 5*s.* a week for not more than eight weeks; members contributing 4*d.* a week, 10*s.* a week.	5*s.* a week for eight weeks in one year.	5*s.* a week for not more than eight weeks.	6*s.* a week for thirteen weeks.
Sick benefit	The same as out-of-work benefit.	The same as out-of-work benefit.	The same as out-of-work benefit.	—
Funeral benefit	A levy of not more than 6*d.* a member is raised on a member's death. Not less than 2*l.*, nor more than 6*l.* may be paid in any one case.	A levy of 6*d.* a member is raised on a member's death.	Not more than 2*l.* is allowed from the funds.	4*l.*
Dispute benefit	—	—	—	7*s.* a week for thirteen weeks. Victimised members, 8*s.* a week.
Accident benefit	—	—	—	—

[§ 765.]

[§ 765.]

	Society of Women employed in the Upholstery Trade. (London.)	Society of Women employed in Book-binding. (London.)	North Stafford Branch of the Women's Trade Union League.	Bristol Association of Working Women.
Out-of-work benefit -	5*s.* a week for not more than six weeks in one year.	5*s.* a week for not more than eight weeks in one year.	3*s.* a week for twelve weeks.	Members contributing 2*d.* or 3*d.* a week, 5*s.* a week for not more than eight weeks in one year.
Sick benefit - -	The same as out-of-work benefit.	The same as out-of-work benefit.	—	The same as out-of-work benefit.
Funeral benefit - -	A levy of 6*d.* a member is raised on a member's death.	Not more than 2*l.* is allowed from the funds.	—	Members contributing 3*d.* a week, 3*l.*
Dispute benefit -	—	—	6*s.* a week - -	As the Committee may decide.
Accident benefit -	—	—	—	—

	Edinburgh Women Workers' Federation.	Manchester and Salford Federation of Women Workers.	Amalgamated Protective and Provident Society of Women Working in Trades in Oxford.
Out-of-work benefit -	4*s.* a week for not more than four weeks in one year.	Members contributing 2*d.* a week, 4*s.* a week for not more than six weeks; members contributing 3*d.* a week, 6*s.* a week.	5*s.* or 7*s.* a week for four weeks in one year, according to the rate of contribution.
Sick benefit - -	The same as out-of-work benefit.	The same as out-of-work benefit. A sum of 10*s.* in confinement.	The same as out-of-work benefit.
Funeral benefit -	—	—	A levy of 6*d.* a member is raised on a member's death.
Dispute benefit -	6*s.* a week. Victimised members may receive an additional grant from the funds.	—	—
Accident benefit -	—	—	—

The tabulated statements show that out-of-work benefit is granted most frequently. Sick benefit ranks next, and is allowed by 11 of the associations, the rules of which have been received. In most cases it is expressly stated that members do not receive any benefit during their confinement, but one society grants a fixed sum. Funeral benefit in one case varies with the length of membership of the deceased person. In the Bristol Association it is only granted to members who pay the highest rate of contribution. The amount in dispute benefit varies with the rate of contributions, of one society. "Victimised" members receive a higher rate than ordinary members on strike, in two cases. Accident benefit is provided in two societies in the textile and clothing trades. It is not clear in all cases whether both out-of-work and sick benefit are allowed during the same year.

Dispute and other regulations.

766. Seven societies, the Nottingham Tailoresses' and Machinists' Society, the Edinburgh Women Workers' Federation, the Leeds Tailoresses' Union, the North Stafford Women's Trade Union League, the Denton Felt Hat Trimmers' and Wool Formers' Association, the Bristol Association of Working Women, and the Dundee Mill and Factory Operatives' Union, have regulations with regard to disputes with employers. The five first only require that the case shall be laid before the committee, which decides upon the course of action which the members must adopt. Arrangements for the settlement of disputed points by arbitration are contained in the rules of the Bristol Association and the Dundee Factory Operatives' Union. In the event of arbitration being refused by the employer, the committee of the Bristol Association, with the consent of two-thirds of the members, obtained by ballot, can authorise a strike. The Dundee Factory Operatives' Union, the North Stafford Women's Trade Union League, and the Leeds Tailoresses' Union do not support members who strike without the authority of the committee, or who continue out after the committee has declared a strike at an end. During a strike, the executives of the Leeds Tailoresses' Trade Union, and of the North Stafford Women's Trade Union League can increase or decrease the rates of contribution and dispute benefit, at their discretion. Employers' interests are protected, in the case of the Upholsteresses' and the Shirt and Collar Makers' Societies, and the North Stafford Women's Trade Union League, by a rule which provides that members who defraud an employer shall be out of benefit until the next quarterly meeting. The only example of hostility towards non-unionists is contained in the introduction to the rules of the Felt Hat Trimmers' Association. Members are advised "not to teach any person to trim or form, except they "promise to join the Association." In most societies a book is kept at the office, in which unemployed members sign their names daily. Work is offered to members according to the order of their names on the list, and in three cases those who refuse a post must place their names last. Members of the Felt Hat Trimmers' Association are provided with an "introductory card," which they must present at any shop where they seek employment. In addition to this register, the secretary generally enters in a book the names of any establishments where there are vacancies. The rules of the Bristol Association provide that "when practicable, "an office shall be taken where members shall attend, "and engage in some useful occupation, between the "hours of nine and five. Such work to be found by the "executive committee, and any proceeds arising from "the sale of it, to be put to the funds of the "Association." Alterations in the rules can usually be made only at a general meeting, after one month's notice has been given. The Scientific Dresscutters' Society also stipulates that all amendments shall be registered, before they are deemed valid.

[§ 767.] Objects.

767. The maintenance and protection of the rights and privileges, both of the trade, and of individual members; the regulation of the relations between employers and employed, in order to prevent trade disputes; and the formation of benefit funds, are stated to be the objects of the greater number of these societies. The Bristol Association of Working Women desires further to regulate the mutual relations between workwomen, and "to exercise a supervision over any existing and future "acts of the Legislature, which may injuriously affect "the employment of women." One of the objects of the Nottingham Tailoresses' and Machinists' Society is to "generally improve the social condition of its "members." The Felt Hat Trimmers and Wool Formers wish to "induce all employers in the trade to pay the "same price for the same kind of work," and the Edinburgh Women Workers' Federation desires "fair "wages, shorter hours of labour, and sanitary work-"shops." The North Stafford Women's Trade Union League wishes to "secure by co-operation for all its "members a just and proper wage for their labour, to "encourage efficiency, and to shield them in the "courts of law, and elsewhere, from any attempt, by "whomsoever made, to infringe their rights and "privileges."

Trades Councils and Trades Union Congress.

768 Women had for several years been admitted to trades councils in various parts of the country, before the establishment of a Women's Trades Council in London, in the year 1883. The Council is composed of delegates from the women's unions in London and the provinces, each of which is entitled to one representative for every 500 members or less. Delegates are required to attend meetings of the Council once a month. The annual contribution to the Council is 2*d.* for each member. It is intended that the Women's Council shall eventually take upon itself the work of organising women workers throughout the country, which has hitherto been carried on by the League. But this cannot be done until women's trades councils have been established in all the large towns, and the movement is still too recent for so great an advance to have been made. The Women's Council annually sends a delegate to the Trades Union Congress, to which women were first admitted in the year 1875, when the Shirt and Collar Makers', Bookbinders', and Upholsteresses' Societies each sent a delegate to the eighth congress. Since that year women delegates have regularly attended, and taken an increasing part in the business of the congresses.(1)

Results of organisation. (i.) *Economic results.*

769. In spite of the numerous difficulties which have been shown to hinder the establishment and growth of women's organisations, they may claim to have obtained considerable economic and social advantages for their members. Taking the economic results first, it is stated that through the action of the Liverpool Tailoresses' and Coatmakers' Union, the hours of labour have been reduced from 12 to 10.(2) As the result of organisation among the Glasgow brushmakers, a uniform rate of payment has been established in all but three of the shops, and "the women's union has "a price list which fixes the rates for 59 varieties of "work. . . This list shows an increase of 10 per "cent. on the rates paid two years ago."(3) It was stated in 1890 that the Dundee Mill and Factory Operatives' Union had already succeeded in securing three rises of 5 per cent. for its members, without resorting to a strike. In January of the same year meetings were held at Ipswich with a view to organising tailoresses and corset makers, and "it is a signifi-"cant fact that in February one of the largest firms "in the clothing trade made known to their workers "their intention of giving a bonus to all in their "employment."(4) [§ 769.]

The Liverpool Upholsteresses' Union, which was established in 1890, obtained an advance in wages of 2*s.* within six months of its formation.(1) It is stated by the secretary of the Nottingham Tailoresses' Society, which has only been established about 12 months, that it has already successfully resisted a proposed reduction of wages,(2) while the formation of a union among the lace-makers in this town has had the effect of greatly checking the system of fines in the factories.(3) The East London Confectioners' and Ropemakers' Unions, and other societies, have also succeeded in obtaining considerable improvements in the conditions of employment in the trades they represent. For example, after the establishment of the East London Confectioners' Union, it was stated that in one factory, although the workers were not in the Union, a share of profits or a bonus was given to the girls, all fines were stopped, a library and dining room were fitted up for them, "and things are ever so much better in that factory."(4) The social and moral advantages of organisation are equal if not superior to the economic, and the influence of the Women's Trades Union League in this direction may be said to have been very great. In 1878 it had already instituted a halfpenny-bank, a library, a swimming club, an office where advertisements could be consulted, and a journal, and in 1881 a co-operative society was established. Social gatherings have been held from the first by the members of the League and of the various societies, and these appear to do much towards creating a friendly feeling among them. As an instance of the educational influence of organisation, the secretary of a provincial society said that she "never wrote for about five years before the "society started,"(5) and a witness before the Commission stated that it had "proved an advantage indirectly, "even when it gained no advance in wages for them. "I think," she added, the "women are certainly "treated with more respect when they are organised, "and they are not quite so much afraid of the em-"ployers and forewomen as they often are else."(6) Information has been furnished respecting an employment office established at Dundee in January 1892, which was said to have proved both morally and economically advantageous to the workers. It was instituted by the honorary president of the Dundee Mill and Factory Operatives' Union, for the benefit both of the members of that association and of other workers. "A "common sight in the Dundee streets is that of groups "of working girls on their way to the various mills to "enquire of the gatekeepers whether any 'spinners' or "'shifters' or 'low mill hands' are wanted. They are "told to call again, and so they continue the weary "tramp until a foreman or manager may select them "for work. It is obvious that young women almost "destitute wandering about the streets of a seaport "town in this way are liable to meet persons of a "degraded character." The moral advantage of an office of this kind is evident from the fact that, before the employment office was started, there was no reading room or other establishment, where these girls might find shelter. The name, age, occupation, and other particulars respecting each worker are entered in a register which is kept at the office. No fee is charged, and the expenses are met by voluntary contributions. More than 1,500 names were registered during the year 1892, and, during the jute famine in the spring of that year, as many as 60 girls were sometimes kept in the office. A sewing mistress was engaged for them, and dinner tickets were given to those for whom no dinner was provided.

(ii.) *Social and moral results.*

C. TRADE DISPUTES.

Infrequency of trade disputes where only women are employed; effect of organisation on trade disputes.

770. In spite of much ill-feeling which undoubtedly exists between employers and employed in many industries, trade disputes are of comparatively rare occurrence where women are exclusively engaged. For example, it appears that no strikes of dressmakers, milliners, or upholstresses have ever yet taken place. A great contrast, however, is offered by those trades where both men and women are employed. Women have taken part in a large number of strikes, particularly in the textile industries, where in point of numbers they were in the majority. But it will be found to be almost invariably the case that these strikes were due

(1) "Women's Trades Union Review," January 1893, p. 6. (2) Letter from G. Noble, 14th November, 1893. (3) P. 161. (4) Group C., Minutes, Vol. I., Miss James, 8634. (5) Women's Trades Union League, Reports, 1878, pp. 8-13; 1883, p. 12; 1885, p. 5. (6) Group C., Minutes, Vol. I., Miss Black, 8856.

[§ 770.] in the first instance to the action of the men workers. Women, one witness stated, "will go on submitting to "any imposition, rather than strike: it is only when "they are forced into it."(1) One reason for this indisposition to strike on the part of the women is the absence of organisation among them until recent years. The causes of this lack of organisation are dealt with elsewhere, but it appears evident that where women's unions exist strikes are not only more successfully conducted, but they are also more frequent.(2) Thus the East London Ropemakers' Union has had "many" strikes, by three of which it has obtained considerable improvements in the conditions of employment. With regard to one of these strikes, the secretary says, "the "conduct of these 98 women proves beyond question "that women can, under trusted leadership, combine "with a steadfastness and courage equal at least to "men."(3) "I never knew of any union of women "standing together and acting in the determined, self-"respecting and self-denying manner that they have "done."(4) The only record of picketing occurs in connection with the ropemakers' strike of 1890, when a woman over 70 years of age "took her place with the "pickets at six o'clock in the morning. Every morning "through the depth of last winter she took her place "there, and stood her four hours with the other pickets "every day."(5) On the other hand, it is clear that, although the presence of a strong union increases the women's inclination to strike, the same fact induces employers to attend to their grievances, and thus recourse to the extreme measure of a strike is not always necessary. For instance, "things are ever so "much better" in a confectioner's factory since the formation of the Confectioners' Union. "The masters "know that the workers are really awake to a sense of "their condition."(6) With regard to the dispute at the Pier Cordage Works, Millwall, the manager declared that "if he had known he was going to have an organised "strike, he would not have held out at all."(7)

Causes of strikes.

771. The majority of the strikes in which women have played a leading part were either for an advance or against a reduction of wages. The question of hours does not occupy nearly so important a place, mainly, no doubt, owing to the limitations already prescribed by the Factory Acts. In several strikes, "reduction of "hours" was included among other demands, but the only large strike for this cause alone was that of the Liverpool tailoresses in 1890. In a few cases the women have struck for a fixed time for cleaning machinery, proper meal-times, and the payment of overtime. A very large number of strikes, particularly in the textile trades, arose from disputes as to "bad material." A considerable number were due to various conditions of employment which the workers considered objectionable. The attempt to introduce a new system of weaving occasioned a strike among Glasgow weavers about 1890. In October 1889 some worsted menders at Stanningley struck against piece-work,(8) while, on the other hand, the change from piece-work to day-work caused a strike of candy-workers in the South-east of London in the following year.(9) Several disputes occurred among the fur-pullers in the same district in December 1889, one of the objects of which was to obtain "re-distribution of "work."(10) In January 1891 the fur-pullers again struck, because "the indoor pullers objected to the skins "being opened by men for the outdoor pullers."(11) "Excessive steaming" is stated as the cause of several strikes in the textile trades. A few strikes were to obtain the abolition of excessive fines; one of the most important of these was the chocolate workers' dispute in the East End in July 1890. In the textile trades the obnoxious conduct of the overlookers has given rise to several strikes, most of which were successful. On the other hand, three strikes in these trades were occasioned by the discharge of one or more overlookers. The strike of the Bradford weavers in 1891 was the most important of those due to this cause, which was called "ridiculous" by the Union.(12) Several strikes were occasioned by the dismissal of one or more women on grounds which their fellow-workers deemed insufficient. The most important of these was successfully conducted by 500 match-makers in the East End in January 1890.(13) The lock-out of the Sheffield confectioners, in September 1890, was due to their having joined the Gas Workers' Union. In January 1891 a strike of 600 ropemakers occurred at Newcastle-on-Tyne, as a protest against the "discharge of the officials "of a recently formed branch of the Union." The London Laundresses' strike in 1891 originated from a personal disagreement of the women in one establishment with their employer. The only strike which was due to a "sympathetic" cause was that of 150 tinplate workers in the South-east of London, in August 1889, who came out to support the dock labourers.(1) [§ 771.]

Special Strikes and Lock-outs.

772. No details as to the development and conduct of several important strikes, as, for instance, that of the London match-makers, in January 1890, are contained in the oral or written evidence. Thus a complete account of the strikes organised by women is impossible with the materials at disposal. It must also be borne in mind that large numbers of women have been concerned in many strikes initiated and conducted by men. These have been treated elsewhere, and the account here given is confined to those where women alone were affected, or where the strike was entirely due to their influence.

Textile trades. (a.) *Cotton spinners, Oldham, 1886.*

(a.) A strike was caused at the Henshaw Street Spinning Company at Oldham, in 1886, by the objectionable conduct of an overlooker towards the women employed under him. The firm supported the overlooker "until the conviction in the police court, after "which they discharged him, but refused to take any "operatives who struck against him back to work." During the strike the Card and Blowing Room Operatives' Association allowed 12*s.* a week to the women and 15*s.* a week to the men who were out. The total cost of the strike was over 2,030*l.*(2)

(b.) *Nelson 1891.*

(b.) Another strike occurred at Nelson in December 1891 from a similar cause. "In this case the question "of guilt was decided by three clergymen, who were "chosen as arbitrators, both sides agreeing to this "mode of settlement." When the decision was arrived at, the overlooker left his employment, and work was resumed on March 12, 1892. The award was "printed "and distributed among the weavers in Nelson, and is "believed by them to have created a marked improve-"ment, not only in the behaviour of overlookers, but "in the attitude of employers upon this question."(3)

(c.) *Cotton weavers, Glasgow 1890 (circ.).*

(c.) About 1890 a Glasgow manufacturer attempted to introduce the three-loom system into his mill. "The "girls immediately struck work. After the strike had "gone on for some days the Glasgow Trades Council and "the Council of the Women's Protective and Provident "League took the matter up, and entered into negotia-"tions with the employer. The latter offered very fairly "to provide new machinery, to introduce the change "gradually, and to pay the wages due to increased "production. The Trades Council and the Council "of the League endeavoured to persuade the girls of "the desirability of the arrangement, pointing out to "them that it would result, not only in larger wages "to themselves, but would help in the very important "matter of keeping an industry in the district. The "workers remained unconvinced, and finally the "League and the Trades Council offered to send an "expert to Lancashire to investigate the difference in "the system there. This was arranged, and the "report brought back was that the Lancashire women "were working three and four looms of the kind used "in Scotland. The workers, however, refused even to "allow a single experiment of three looms being tried "in the weaving-shed, and only went back to their "work on condition that such should not be en-"forced."(4)

(d.) *Lancashire, 1891.*

(d.) In April 1891 a strike arose among the Lancashire cotton weavers "upon the question of a fixed "allowance of time for cleaning roving and slubbing "frames. The firm had not observed the general "custom of stopping the machinery at stated intervals, "or at least for fixed periods, and the operatives were, "in consequence, forced to clean their frames during "meal-hours, in contravention of the Act. They asked "that a time should be fixed for this purpose, and after "some delay were informed that the machinery could "be stopped, though it was not stated for what time. "Immediately after this permission was granted, a "frame-tenter was discharged for having spent one-"hour-and-a-half cleaning her frame, the overlooker "being of opinion that this was too long. . . . Several

(1) Strikes and Lock-outs of 1889, pp. 53, 83. (2) Group C., Strikes Abstract, Vol. I., p. 51; Minutes, Vol. I., Silk, 522, 529–33. (3) p. 116. Strikes and Lock-outs of 1891, pp. 179, 314. (4) p. 174.

[§ 772 (d.)] "other workers had been engaged at the same task "for a similar time. The operatives, considering the "dismissal unjust, struck in support of their com- "panion, and were then locked out. The time allowed "at another mill in the neighbourhood for cleaning "an exactly similar frame is two hours." The frame-tenter who was discharged was not taken back, but the Union undertook to support her until work should be found for her.(1)

(e.) *Cotton weavers and winders, Glasgow, 1892.* (e.) One of the most important strikes in the Glasgow cotton trade occurred in 1892 against a proposed reduction of wages. The weavers and winders were then unorganised, but 300 came out. About 1,200*l.* was subscribed by trade and other societies and by the public. A strike committee was appointed, and relief was granted at the rate of 7*s.* 6*d.* a week. The employers several times refused proposals for submitting the matter to arbitration. After 13 weeks the firm withdrew half the proposed reduction and made other concessions. "The final negotiations were conducted "by a deputation of members of the Glasgow Protec- "tive and Provident League and the workers them- "selves," who became affiliated to the League.(2)

(f.) *Linen weavers, Forfar, 1889.* (f.) In September 1889 the linen weavers in two factories at Forfar claimed an advance in wages of five per cent., "because of an increase that had been con- "ceded in Dundee." One of the firms affected granted the advance in three days, but the other refused it. "During the negotiations, the women took the law into "their own hands, and struck work." After the strike had lasted two weeks, all the other firms in the town locked out their operatives, "and for 10 weeks the "whole population of that town was out of work and "locked out." The number of women on strike was 145, but the total number of men and women on strike or locked out was about 2,400. Help was received from all parts of the country, and even from California and India, but the funds of the Union became exhausted, and its "powers of forcing the advance were exhausted "also." The strike was settled by a compromise, and although "the women were the first to strike, they were "the last to suffer." Men receiving the lower rate of wages had an immediate advance, and it was agreed that the women's claims should be "favourably con- "sidered" the following spring. As a matter of fact, nothing whatever was done for the women until February 1892, when they were granted an advance. The strike cost the Union about 2,500*l.*(3)

(g.) *Woollen weavers, Leeds, 1888.* (g.) A strike of about 300 women weavers occurred at Leeds on September 19th, 1888, against a reduction of the piece-work wage, which would have amounted to 3*s.* in some cases. Meetings were held, and a deputation of the women interviewed the firm, but it was not successful in obtaining a settlement. The Leeds Trades Council then took the matter up, and on September 25th induced the firm to agree that no worker should be discharged for having taken part in the strike, that all fines should be abolished, and that the proposed reduction should be considerably lessened. It was also determined that the women weavers should be organised as a branch of the West Riding of Yorkshire Power Loom Weavers' Association.(4)

(h.) *Woollen weavers, Wakefield, 1889.* (h.) In February 1889 a strike against reduction of wages broke out at Alverthorpe, near Wakefield, among the weavers in a mill belonging to Messrs. Colbeck, who supplied cloth for army and police clothing. Two members of the West Riding of Yorkshire Power Loom Weavers' Association went to interview the firm, but were refused admission. Subscriptions were raised for the workers on strike, but after a fortnight's struggle a few weavers resumed work at a reduced wage, and the rest were replaced.(5)

(i.) *Bradford, 1891.* (i.) In May 1891 the overlookers in a mill at Bradford struck against a new arrangement which involved additional work without additional pay. About 400 weavers came out as a protest against the dismissal of the overlookers, and a lock-out resulted which lasted for a week. At the end of that time work was resumed, but "a number of the weavers failed to be re-instated "and new overlookers were engaged."(6)

(j.) *Ravensthorpe, 1892* (j.) A strike of 110 weavers occurred at Ravensthorpe against a reduction of the piece wage. "The prices "before the strike were 2*s.* lower than the Association "scale, and the average wage of a box-loom weaver "was 8*s.* 8*d.* per week, while that of a plain loom "weaver was 8*s.* 4*d.* per week. A small proportion of "the women belonged to the Weavers' Association, "and were entitled to strike pay, but the majority "were without means of support during the strike. "By Union intervention the proposed reduction was "lessened by 9*d.* in each case, and the weavers who "were unable to hold out longer than a month "accepted these terms and returned to work."(1) [§ 772 (j.)]

Clothing trades.

(k.) *Hosiers, Nottingham, 1892.* (k.) A strike and lock-out occurred simultaneously in two Nottingham hosiery firms in May 1892. The seamers in one factory struck against a reduction of $\frac{1}{8}d.$ per dozen pairs of stockings, which would reduce their price to that paid in the other factory. At the same time the lower-paid seamers struck for an advance of $\frac{1}{8}d.$ This was granted after nine days, and the strike and lock-out came to an end.(2)

(l.) *Tailoresses, Leeds 1889.* (l.) A strike occurred among the tailoresses in Messrs. Arthur's factory at Leeds in October 1889, against deductions from wages for steam-power, cooking, and charities, and the obligation to buy thread in the factory at a higher price than that paid elsewhere. Mass meetings of the women were held, assistance was received from the Leeds Trades Council and from the public, and a union was formed which soon numbered nearly 2,000 members. But after less than three weeks the strike came to an end; some workers were re-engaged on the employers' terms, others were replaced. The number of women actually on strike was 412, but 760 were affected altogether.(3)

(m.) *Liverpool, 1890.* (m.) In the summer of 1890 the Liverpool tailoresses, encouraged by the success of the men's society in obtaining a reduction of hours, formed a union, and "sent "a memorial to the Middlemen's Society asking for a "two hours' reduction. No notice was taken of their "request. They, therefore, blocked two shops, and sent "a letter to say that the reduction of hours must be "given without any reduction of wages, and without "adopting the piece-work system. They had no funds, "but had agreed to support those who were out. The "middlemen held a meeting, and decided to lock them "out, thinking that without funds they would be "frightened. The Trades Council had, however, "promised them support, and the girls kept together, "and patrolled the streets to show what respectable- "looking people they were, as statements to the "contrary had been made. The middlemen still held "out, but one firm was known to want to make the con- "cession; the girls went to this employer, and told "him that if he would pay the foreman a weekly wage "he could employ them. He dismissed his middleman, "but could not get a Liverpool man in his place. "The Manchester Tailors' and Pressers' Society, "however, sent down a foreman, and about 30 women "went into this shop. In another fortnight the "'middleman' of another large firm was persuaded to "make the concession, and then all the rest gave in." This strike cost the Union "over 70*l.*" "In one case "afterwards an outdoor shop wanted to increase the "hours; the Union took out the women, and paid them "1*l.* a week for three weeks, and places were found for "them elsewhere."(4)

Miscellaneous Trades.

(n.) *Brushmakers, Glasgow, 1890.* (n.) In 1890 some of the men engaged in brushmaking at Glasgow agitated for an increase of wages, "which they claimed had been verbally promised "them by the employers some years previously. After "some discussion the desired increase was granted "throughout the trade. It had been in force for little "over two weeks, when a reduction of from 15 per cent. "to 20 per cent. was proposed by the employers, who "stated they could not afford the increase. The men "refused this, and struck work. The employers, on "their part, locked out their women workers. The "men's union came to the assistance of the latter, "and granted them aliment from their own funds to "the extent of from 7*s.* to 10*s.* a week; at the same "time they organised the girls into a trade society. "After a three weeks' strike the men succeeded in "having the proposed reduction withdrawn, and re- "turned to work on their old terms. The women were "also taken back, and the men stipulated that they "should participate in the increase of wages. All the "brushmaking firms agreed to this, with one exception. "The employer in this case announced to his women "employees that if they returned to work it must be "at the old terms. A deputation of women waited on "him, and stated they had formed a union, and were

[§ 772 (n.)] "prepared to dispute his proposal. The employer at "first refused to accede to the wishes of the workers, "and dismissed the deputation. They were, however, "recalled, and informed that they might begin work "at the increased rates."(1)

(o.) Confectioners, London, 1890. (o.) In July 1890 the girls employed in a chocolate factory in the East End struck for the reinstatement of one of their number, who had been dismissed for refusing to pay an unjust fine. The employer would not reinstate the girl and locked out 85 of the others. They then determined to ask also for the abolition of all fines, and permission to leave the factory during the dinner hour. At that time they were quite unorganised, but during the lock-out they were formed into a union. After two weeks the lock-out was ended by the concession of the girls' demands.(2)

(p.) Sheffield, 1890. (p.) "In the latter part of 1890," about 300 or 400 women employed in the confectionery trade at Sheffield were enrolled in the local branch of the Gas Workers' and General Labourers' Union. "Immediately after "those women had joined our Union, their employer "gave them notice that, except they withdrew, they "would be discharged." He then "posted bills up "through the works to say that no unionist would be "employed," and dismissed 40 women. "In conse- "quence of the 40 being discharged, the remaining 300 "odd withdrew themselves from the Union." A borough magistrate interviewed the employer, but the latter "expressed his hostility to their unionism in an "uncompromising and threatening manner, and he "declined to entertain any idea of either truce or "negotiation." "At first he explained to me that his "objection was to unionists connected with this par- "ticular Union, on the ground of gas-workers being "connected with it. Then I pressed him on the point "of whether he would allow them either to form a "union amongst themselves or to join some union of "other workers and confectioners, and he objected to "that too . . . . he would not have them in a union at "all." The 40 women who had been discharged were not taken back, and the Union "provided them "with their wages until such times as they got employ- "ment." It was stated, however, that "the net result "was that while forty lost their employment the others "benefited by what took place," for "the hours were "reduced, and there was a considerable advance in "wages, not a general advance all round, but still a "very large number had their wages advanced." "You "will see," added another witness, "when I tell you "that the average wages of the 400 girls who joined "our Union amounted to 6s. per week, and that their "average age was a little over 20 . . . . that there was "a little room for improvement."(3)

(q.) Drysaltery, London, 1891. (q.) Evidence was given before the Commission with regard to a strike which occurred in a drysaltery to obtain payment for overtime. "There was a rule "posted in the master's office, that all overtime should "be paid for, but if a sufficient amount of work was "not done by the end of the week, they would have to "remain on Saturday until any hour to finish the "work. The girls complained that they never knew "how much work was expected of them, and the "employer admitted that it was impossible to set a "task for each day." No complaint was made until it was found that the forewoman had been paid for over- time, and then the girls came out, and refused to work overtime unless they were paid for it. The manager, when interviewed on the subject, stated that he was not under the Factory Act, and he "could work his women "any hour he liked." Application was then made to a solicitor, and the manager, "because he was afraid of "exposure, sent the girls the money for their overtime, "but of course they have not gone back again."(4)

(r.) Laundresses, London, 1891. (r.) In June 1891 the laundresses in one establish- ment at Marylebone struck on account of a personal disagreement with their employer. Other workers, to the number of about 700, joined them, and demanded better conditions of labour. The Union did not sanction the strike, but persuaded the women, who were non- unionists, to resume work after one week on condition of "advance of wages in one or two cases, reduction of "hours in another."(5)

(s.) White lead workers, Newcastle, 1890. (s.) In May 1890 the women employed in the New- castle white lead works struck for an advance in wages and a reduction of hours. At the same time they formed a society, but after a few weeks "the Union collapsed, and the women were obliged to come to work." It was stated that the strike failed "simply "because it was the wrong time; there was a fall in "the market."(1) [§ 772 (s.)]

(t.) Match- makers, London, 1388. (t.) Considerable discontent with the conditions of employment had prevailed in Messrs. Bryant and May's match factory for several years before the strike in July 1888. The girls complained of reduced wages, deductions for materials and assistance in their work, and of petty tyranny on the part of foremen and forewomen. On July 5th a girl was dismissed for refusing to sign a paper denying the existence of the system of fines and reductions in the factory, and, as a protest against her discharge, all the other girls at once struck work. A mass meeting was held a few days later, when a strike fund was instituted, and prepara- tions were made for organising the girls. Within a few days 150*l.* had been collected for distribution among the match-makers on strike, and a union was formed. A deputation of the girls waited on the London Trades' Council, which promised them support, and com- municated with the directors of the company. Meanwhile, meetings were held in all parts of London in support of the strike, and a deputation of the girls marched to the House of Commons. The result was that, after the strike had lasted about a fortnight, on the intervention of the London Trades Council for the second time, Messrs. Bryant and May conceded all the girls' demands. It was agreed that none should be discharged for having taken part in the strike, that all fines and deductions should be abolished, that a dining- room should be provided for the girls, and various other improvements should be made in the conditions of employment, and that the Union should be recognised.(2)

(u.) Ropemakers, London, 1890. (u.) A strike occurred among the East London ropemakers in November 1890, for an increase in wages of ½*d.* an hour. The women pointed out to the employer the impossibility of living on 7*s.* 6*d.* a week, but he refused the advance, "and told us that he could "get his work done in the north for 6*s.* a week by "women there, and he should do it. We gave him "another week to consider the case, and told him that, "if at the end of the week he did not come to our terms, "the women would cease working. That we carried "out, and for eleven weeks these women maintained "themselves with the help of public contributions, and "in the end we practically won our strike, with the "intervention of the London Trades Council. . . . "We wanted to make the work by the hour, and we "wanted ½*d.* an hour more. The women were getting "1¾*d.* to 2*d.* and 2¼*d.* an hour, and we wanted 2*d.*, 2¼*d.*, "and 2½*d.* an hour. After a time he has granted the "whole of our request, and the Union and the employer "are on the best of terms; there are only union women "employed in that factory." The strike cost about 382*l.*(3)

(v.) 1891. (v.) Another strike broke out at the Pier Cordage Works, Millwall, in 1891, for a supply of hot water for breakfast, and an hour instead of half an hour for dinner. These women were unorganised, but the Ropemakers' Union undertook the conduct of the strike. After a fortnight the employer succeeded in getting some women in, but they were bought off by the Union the next day. The manager then came to terms, and said that "if he had known he was going to "have an organised strike, he would not have held out "at all. He gave in to our terms entirely. No woman "was to be dismissed for taking part in the strike, they "were to have an unlimited supply of hot water, and "they were to have an hour for dinner."(4)

Proposals for preven tion and settlement of trade disputes 773. With regard to the prevention of trade disputes, the Shirt and Collar Makers' Society would have "the "workpeople form themselves into trade unions, and "be recognised by employers."(5) One witness was of opinion, however, that although "a strong trade union "will do a great deal, the grievances will never be "done away with until employers are compelled to "recognise that they are working and wearing out "human lives instead of mere machines."(6) The Dressmakers', Milliners', and Mantle-makers' Society advocates "labour bureaux or exhibitions with co- "operative workshops, worked by members of women's "trade unions in their respective trades, with the "trial of an eight hours' day, so as to equalise the "division of labour between the outdoor hands and the

(1) p. 275. (2) Group C., Strikes Abstract, Vol. I., p. 53; Minutes, Vol. I., Miss James, 8517, 8616. Letter received from Miss James (23rd October 1893). [§ 773.] "indoor hands." A desire for the extension of labour bureaux is expressed by the Ropemakers' Union, which also wishes that "municipal workshops be "opened."(1) Very little information has been received as to the attitude of women workers towards systems of co-operative production, industrial partnership, or profit-sharing. The Shirt and Collar Makers' Society and the Dressmakers', Milliners', and Mantle-makers' Society mention the practice of bonuses in a few establishments.(1) In several cases disputes have been settled by arbitration or mediation. The written evidence of the Laundresses' Union recommended arbitration or conciliation boards for the arrangement of disputes, and the rules of some of the women's societies require that an endeavour shall be made to settle all differences by this means before resorting to a strike.(2) [§ 773.]

GEOFFREY DRAGE,
Secretary.

[§ 774.] Economic operation of the royalty system.

774. The "economic operation" of the royalty system upon the mining industries of this country remains to be considered. By the royalty system in this country is meant the ownership of minerals by persons, who, as a rule, do not work the minerals themselves, but lease the right of mining to other parties in consideration of a royalty or agreed sum payable in respect of the quantity of minerals worked, as distinguished from the State ownership of minerals or the State control of the right of mining. It is true that the Crown in England owns all gold mines, and possesses in the Forest of Dean and elsewhere certain mining rights, but these rights affect such a small quantity of mineral that for our present purpose they may be neglected. As coal is the most important mineral raised in England, the subject will be considered with special reference to that commodity. The principles that apply to it are equally applicable to ironstone and iron ores. Any peculiarities specially affecting the last-mentioned products will be dealt with separately. For the purpose of the discussion, it will be assumed that such wayleave charges and similar payments as do not form part of the cost of the carriage of the mineral form part of the royalty.

The nature of a royalty.

775. A mineral lease may be regarded as conferring a right (limited amongst other things in point of time) to work and carry away the minerals specified, subject to certain payments that partake of the nature of a rent. But, as Lord Cairns has pointed out, in a lease of mines, "the contract is not in reality a lease at all in "the sense in which we speak of an agricultural lease. "There is no fruit, that is to say, there is no increase, "there is no sowing and reaping in the ordinary sense "of the term, and there are no periodical harvests. "What we call a mineral lease is really, when properly "considered, a sale out and out of a portion of the land." These words show the fundamental difference (as noticed in paragraph 63 of the Final Report) between the royalty paid for coal and the rent paid for a farm, inasmuch as the working of coal removes the substance itself, whilst the cultivation of a farm leaves, or is supposed to leave, the soil undeteriorated.(2)

[§ 776.] What determines the amount of varying royalties.

776. In practice the actual royalty is settled by an agreement between the parties, and it often happens that the royalty paid by one mine differs from that paid by another, though the coal raised may sell at the same price in the open market. This variation in royalties (save in so far as it may be due to the condition of the coal trade at the respective dates of letting) is due to, and tends to correspond with, the difference in the advantages and disadvantages of one mine as compared with another. Mr. Forster Brown says, "Mines are, in the nature of things, variable; you "cannot take even two mines as being alike, and "royalties help to equalise the circumstances, whether "the circumstances arise from one cause or from "another. It may be that they arise from geogra-"phical position, or from the different nature of the "coal, or from their lying differently, or from being "more faulty or less faulty, and so on. Royalties "operate in their practical incidence to equalise these "variable conditions."(3) But, as Sir Lowthian Bell(4) points out, "a complete equalisation of position becomes "a very complex question," and the bargain entered into between the lessor and the lessee may place the lessee in a more or less favourable position as regards his competitors. It is important therefore to draw a distinction between the royalty which a mine can fairly bear and the royalty which a lessee may agree to pay. When the price of coal is high, competition between lessees may result in royalties that prove, after coal falls in price, to be higher than the mines leased under those conditions can fairly bear, and, on the other hand, when the price of coal is low, lessees may obtain terms that result in proprietors receiving, when coal rises in price, royalties lower than the mines leased can fairly bear.(5) Similar results may follow from unforeseen changes in the physical or other conditions affecting the working of a mine. In some cases a proprietor works his own minerals. He does not actually pay a royalty, but in practice a royalty is charged against the mine in the accounts, equal to a royalty paid in the same neighbourhood for similarly situated mines. In other cases a lessee may

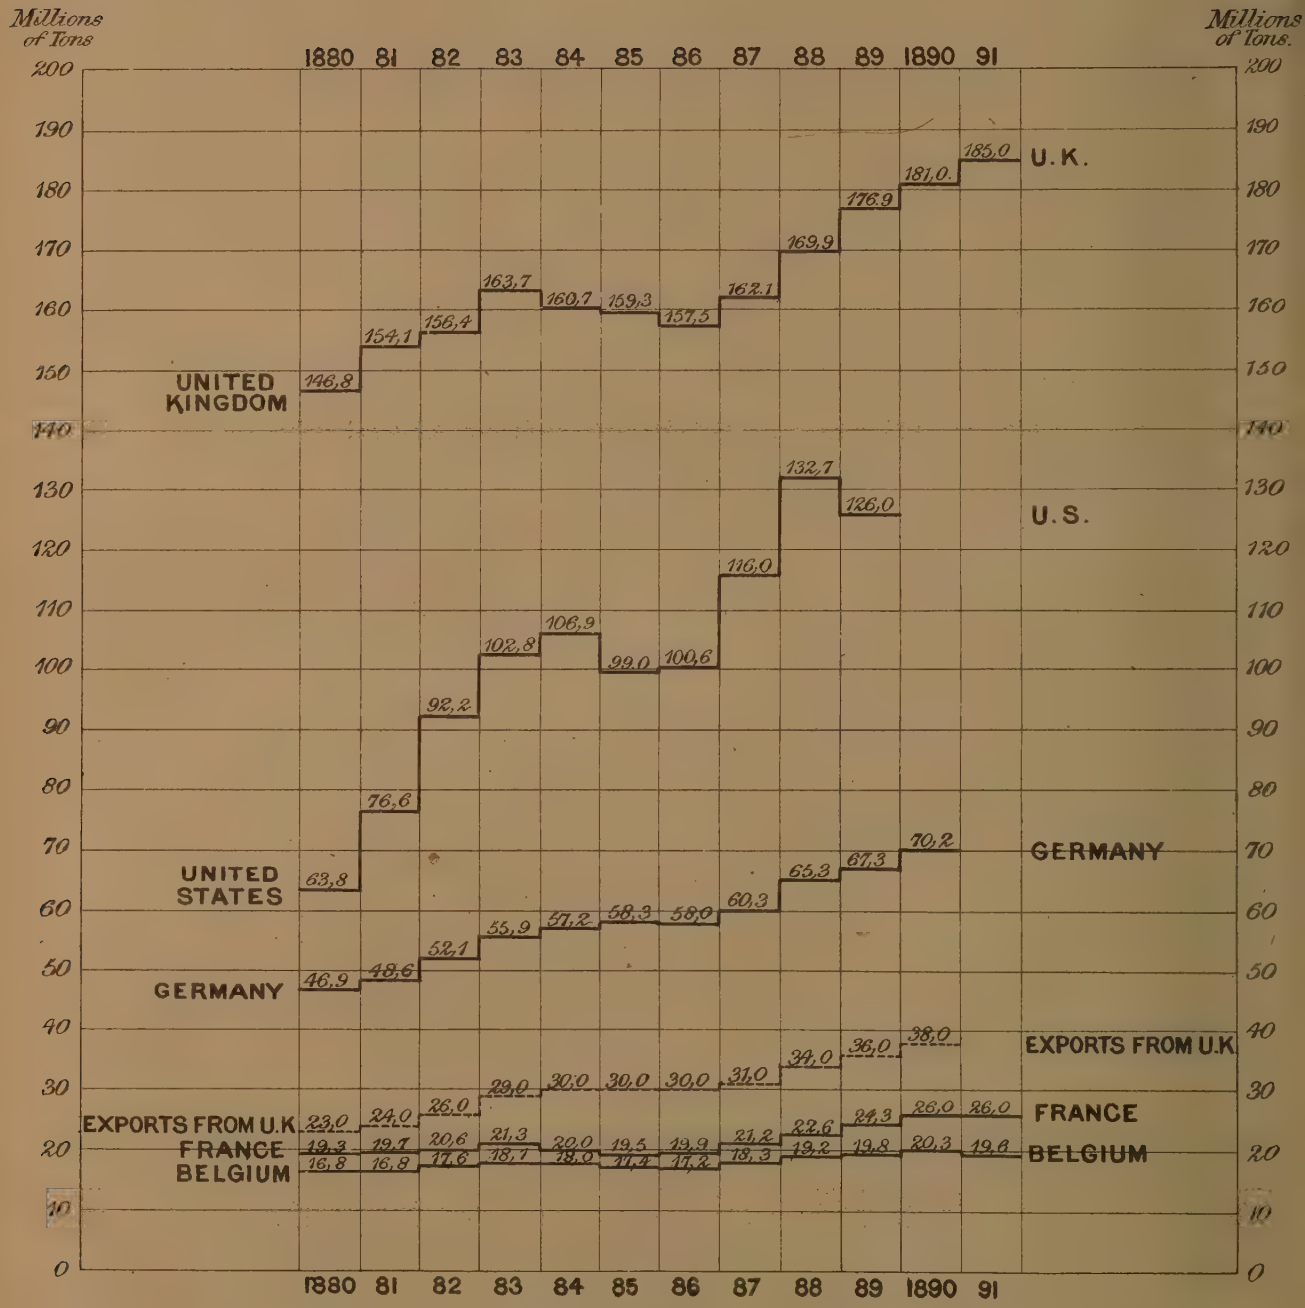
SHOWING IN MILLION OF TONS THE PRODUCTION OF COAL IN THE PRINCIPAL COAL PRODUCING COUNTRIES OF EUROPE FROM 1880 TO 1890.

(THE FIGURES ARE TAKEN FROM THE STATISTICAL ABSTRACTS.)

(See para 777)

(00,000 omitted.)



Judd & Co Ltd, Lith. 63, Carter Lane, Doctors' Commons. (5444. 9/12/93)

[§ 776.] have obtained a long lease at a very low royalty.* Here a portion only of the royalty is paid to the proprietor; the lessee taking the remainder either in the form of rent, if he sublets, or, if he works the mine himself, as an addition to the ordinary return on his capital.(1) The evidence of Sir Lowthian Bell on the relation of the royalties to the iron ore industry confirms the above principles.(2) In the earlier part of our report we have dealt with the effect of the royalty system upon the interests of lessees of minerals. We proceed to deal with its effect—first, upon the interests of the consumer, and, secondly, upon those of the miner, including under the term *miner* all the workers in and about a mine. We shall afterwards deal with the effect which royalties are supposed to exercise over the trade in coal with foreign countries, and with some suggestions we have received for the nationalisation of minerals.

The effect of royalties on the consumer.

777. The price of coal in the wholesale market is, like the price of other commodities, determined by the supply as compared with the demand. Sometimes coal is sold at the pit's mouth, sometimes free on board, sometimes delivered at a fixed place. In the two latter cases the cost of carriage and other charges have to be added to the price at the pit's mouth. The local market, although it tends to follow the price at the pit's mouth, is subject to special variations, owing to the difficulties of delivery in unfavourable weather, and the circumstances and conditions of the particular market. The table put in by Mr. Daglish [Second Report, App. 22, p. 395, *Diagram of selling prices of coal*] illustrates the variations in the selling price of coal at the pit's mouth and in the London market, where it is largely affected by the cost of carriage. The royalty system cannot injuriously affect consumers unless it tends to restrict the supply of coal offered in the market and thus to raise its price. The figures relating to the production of coal for the last 40 years are as follows:—

Periods of Five Years.	Average Yearly production in Tons.
1855–9	66,696,328
1860–4	84,879,267
1865–9	102,970,065
1870–4	120,673,039
1875–9	133,287,745

Since 1880 the yearly production has been as follows:—

Year.	Tons.
1880	146,818,622
1881	154,184,300
1882	156,499,977
1883	163,737,327
1884	160,757,779
1885	159,351,418
1886	157,518,482
1887	162,119,812
1888	169,935,219
1889	176,916,724
1890	181,614,288
1891	185,479,126

These figures tend to support the opinions quoted in paragraph 53 (of the Final Report) to the effect that, although proprietors of minerals have the power to prevent them from being worked by refusing to let them, or by demanding excessive royalties, and to cause mines to be closed by declining to reduce royalties where leases are held on unremunerative terms, the royalty system has not checked the production of coal in the United Kingdom.

* The cases to which we particularly refer are in Monmouthshire, where an extensive mineral property was let many years ago for a long term of years at a very low rent, and has since been sub-let by the original lessees. A complaint was made to us by the persons who are now working a portion of this coalfield that the royalties they are paying are too high, and we ascertained that the lease of the colliery in question was held from a company which obtained their lease from the original lessees, so that there are two intermediaries receiving a rent between the proprietor and the actual worker of the coal. The case is very similar to the transactions which occur between a *concessionnaire* of mineral rights in Spain and the actual worker of the minerals, as described in the evidence of Mr. Broomhead. (J. Barnes, 5259. Broomhead, 1896.)

(1) Sorley, 18,404. (2) Bell, 1044.

[§ 777.] It will not be inappropriate if in this place we compare the production of coal in the United Kingdom with that in other countries.

The production in France, Belgium, and Germany since 1880 has been as follows:—

Year.	France.	Belgium.	Germany.
	Tons.	Tons.	Tons.
1880	19,361,564	16,886,698	46,973,600
1881	19,765,983	16,873,951	48,688,161
1882	20,603,704	17,590,989	52,118,595
1883	21,333,884	18,177,754	55,943,004
1884	20,023,514	18,051,499	57,233,875
1885	19,510,530	17,437,603	58,320,398
1886	19,909,894	17,285,543	58,056,598
1887	21,257,589	18,378,624	60,333,984
1888	22,602,894	19,218,481	65,386,120
1889	24,303,509	19,869,980	67,342,171
1890	26,083,118	20,365,960	70,237,808
1891	26,024,893	19,675,644	73,715,653

These figures, as well as the figures for some other countries, may be given in the form of the diagram which is appended. The above figures show that the production of coal has increased since 1880 by 6,838,436 tons in France, 2,978,302 tons in Belgium, 23,264,200 tons in Germany, and 38,660,504 tons in the United Kingdom. The increase in the 10 years in the United Kingdom is greater than the total production in France or in Belgium, and equals one-half the total production in Germany. Some evidence has been given tending to show that private ownership may cause barriers of coal of an unnecessary extent to be left between adjacent mines, but similar difficulties arise under the system of State ownership or control that prevails on the continent.(1) In some exceptional cases legal difficulties connected with the system of land settlement and the rights of copyholders and proprietors of the surface may have operated to restrict the working of minerals, or led to their uneconomical working; these difficulties have been fully discussed in the previous portion of our Report, and suggestions made with the object of removing them. They are, however, not alleged to have seriously restricted the supply of coal.(2) The opinion has been expressed by some witnesses (3) that if royalties were reduced or abolished the consumer would be benefited. It has been argued that if a lessee could obtain a reduced royalty he could afford to sell his coal at a reduced price, wages remaining the same. But we have to regard not so much what a lessee can do, as what he will do, or is accustomed to do. In ordinary times a lessee who enjoys a special advantage, owing to the lowness of his royalty, will not be disposed to sell his coal cheaper or to pay higher wages than his less fortunate competitors; in depressed times, however, a lessee, who may have the advantage of a low royalty, may reduce his price with the object of driving competitors out of the market, and in such a case the consumer might be benefited by a fall in price.(4) That the advantage arising from a low royalty, or the absence of a royalty will not of necessity go to the consumer (so long as the relation between the supply of and the demand for coal remains the same), is supported by the evidence we have received that those proprietors who work their own coal sell at similar prices to those received by lessees who work coal similar in quality, and who pay a royalty; inasmuch as the proprietor desires to earn the same return for his capital as his competitor in the trade, and at the same time to realise the marketable value of his royalty. Professor W. S. Sorley, who has made the economic aspects of royalties a special study, gave valuable evidence as to the effect of royalties on price. Pointing out that the price realised must be sufficient to repay the expenses of production at the "worst" mines that are worked, as well as the royalties at such mines, he argued that these royalties (called the minimum royalties)* affect price; but that as regards mines more advantageously situated, and consequently yielding higher royalties, the difference between such higher royalties and the minimum royalties is "a payment for the special advantages" of the mine, and, therefore, does

* By a "minimum royalty" is meant the royalty paid by the "worst mine" of a group of mines competing with one another; the "worst mine" being that which possesses the fewest advantages, and, therefore, it must be assumed, is let at a royalty lower than that paid by any other mine competing with it. *See* Sorley, 18,331, and "Mining Royalties," by W. S. Sorley, London, 1889.

(1) Smillie, 6020. (2) Paragraphs, 92 and 101. (3) Wood, 1014–6. (4) Forster Brown, 13,987.

[§ 777.] not enter into price.(1) This view of the relation of royalties to prices is generally accepted by economists, and was admitted by several witnesses representing different interests. It would follow that if existing royalties were reduced by the amount of the minimum royalties, prices, owing to the competition of lessees, would tend to fall by the amount of the reduction.* But in the opinion of those who are intimately acquainted with variations of prices in the coal industry and their causes, such competition would occur only in a falling market; in this case the consumer would get the advantage of the reduction. On the other hand, in a rising market, or in good times, the demand might be sufficient to carry off all the supply without any reduction in price, and then the advantage would go to the lessee.(2) In the above paragraphs we have considered the effect of a reduction of royalties as between the lessee and the consumer apart from the miner. We now proceed to consider the effect of any reduction upon the miner.

The effect of royalties on the miner. (a.) Introductory.

778 (*a*). The workers employed in and about a mine fall into two classes: (1) those whose wages are regulated by the quantity of the work done; and (2) those who are paid by the day. The rate of wages tends to vary with the price of coal. As a rule collieries in each district practically adopt the rates of wages prevailing at the collieries in the district on a given day as the rates to be paid when coal is sold at a given price. These rates are known as the "Standard" rates, and this price as the "Standard" price. The principle of the Standard rate permits the recognition of local customs and local variations; alterations in wages are then arranged from time to time by a percentage addition to or subtraction from the Standard rate. The method in which alterations in wages are brought about varies:—

(1.) In those districts that possess a sliding scale the amount of variation that is to take place, as coal rises or falls in price, is fixed beforehand. At fixed intervals the average price of coal is ascertained, and this price regulates wages for the ensuing interval.

(2.) In most other districts, a rise or fall in wages is settled by negotiation between the coalowners' associations and the miners' associations.

(3.) In districts where the miners are not organised into unions, and where no "Standard" rates prevail, variations in wages are due either to individual negotiation, or to the action of the employers, or to the action of the men acting in a body for the sole purpose of obtaining a rise or resisting a fall.

We have received very valuable statistics which are summarised in Appendix VI. (to the Final Report), upon the interesting question how much of the price realised for a ton of coal goes to the miner. These statistics and the evidence show that when the price of coal rises wages are generally advanced, and that in England and Wales on the average the total cost of labour varies from 50 to 60 per cent. of the selling price of coal at the pit's mouth. We have not received the statistics which enable us to give the proportion for Scotland.(3)

(b.) The effect of a reduction or abolition of royalties on wages.

(*b.*) The representatives of the miners who have given evidence, agree in thinking that a reduction in royalties would tend to raise wages. This opinion has been encouraged by some lessees who, when asked to concede a rise in wages, or to maintain existing wages, have refused to do so on the ground that the royalties they had to pay prevented them from granting the request. On the general question of the relation of royalties to wages, it would be more correct to say that wages govern royalties than that royalties govern wages, for an intending lessee in negotiating for a lease of minerals, must consider the probable cost of winning and working such minerals, as well as every other material circumstance affecting his enterprise; and inasmuch as the principal outlay in the winning and working of minerals is that of the wages to be paid to the miners, it naturally follows that the wages greatly influence the amount of royalty that the lessee can afford to pay upon the mineral worked. If royalties were adjusted at frequent intervals, while prices obtainable for the mineral remained the same, royalties would necessarily be reduced if wages were increased. There would, however, be a limit to such rise of wages, inasmuch as when the rise reached that point at which it absorbed the whole royalty that the poorest mines could afford to pay, no further rise could take place without diminishing the profits of the lessee, or increasing his losses; any further rise of wages would tend to close the poorer mines and throw the miners employed at such mines out of employment. For the same reason, if prices fell, the then existing rate of wages could only be maintained by a reduction of the royalty. No evidence has, however, been given to show that any reduction of royalties has taken place in consideration of the maintenance of, or a rise in, the rate of wages; the reductions conceded by proprietors are generally in respect of a fall in prices, the exhaustion of the better seams, or other difficulties in carrying on the mines.(1) We think it desirable, having regard to the arguments frequently brought forward by working miners, to enter at some length into the probable effect upon their interests of a reduction of royalties, or their total abolition. But it must be borne in mind that we shall have to deal principally with theoretical cases, for no practical scheme has been placed before us for the acquisition of the property in the minerals by the State so as to enable any general reduction or abolition of royalties to be carried into effect. This will be seen further on in those paragraphs of our Report in which we deal with the suggestions we received for the nationalisation of minerals.(2) In discussing this question it is desirable to distinguish between— [§ 778 (*b*).]

1. An adjustment of royalties by the substitution of a sliding scale for a fixed royalty.

2. A reduction of royalties in a particular mine or a particular district.

3. A general and equal reduction of royalties all round.

4. The abolition of royalties.

(i.) An adjustment of royalties.

(i.) During recent years the Ecclesiastical Commissioners and several proprietors in the North of England and elsewhere have adopted the principle of royalties varying according to an agreed scale as explained in the note to paragraph 18. The substitution of a sliding scale for a fixed royalty is to be regarded in these cases as an adjustment of the royalty to the varying price of coal, rather than as any actual reduction—the lessor expecting to recoup himself for the low royalties payable when prices are low by the increased royalties payable when prices are high. If it be assumed, as Mr. A. Barnes suggests, that the fixed royalty is but "the average of a sliding scale," it does not follow that it is immaterial to the miner which system is adopted.(3) Evidence has been given to the effect that the substitution of a sliding scale for the fixed royalty has in times of depression enabled a colliery to be kept going that would otherwise have been closed, and the miners have thus benefited by the lessees being enabled to afford them continuous employment; this has already been referred to in paragraph 59 *et seq.* (*See* Final Report.)

(ii.) A partial reduction of royalties.

(ii.) It has already been stated in paragraph 54 (*see* Final Report) that royalties have been reduced by individual lessors, either because of the low price of coal, or on account of the depreciation in the value of the mine. No evidence has been given to show that the benefit of the reduction was obtained by the miners in the shape of increased wages. The object of the reduction was to enable the lessee to continue working the colliery. Mr. Lamb gave an instance of a reduction of 50 per cent., and said "the lessee got the benefit of the reduction in our case, "because we were absolutely losing very largely before "we got the reduction, and the year that we got the "reduction. (4) The reduction in this instance and in "other instances prevented a loss being sustained that "year." Asked, "Do you think it affected wages?" he replied, "No, I do not think it affected wages." This instance is an example of a reduction due to a fall in the price of coal; the same result would follow in cases where a reduction occurs owing to the depreciation in the value of a mine. In both the benefit to the miner takes the form of continuation of employment, and possibly the avoidance of a reduction in wages.(5) Where the royalty that the lessee contracted to pay is greater than the royalty the mine will bear, four courses are open to the lessee:—To work at a loss; to seek a reduction in wages; to seek a reduction in royalties; or to suspend operations. When the lessee adopts the first course, it is in expectation of a rise in prices, or an improvement in the condition of the mine. As a rule, he endeavours to obtain relief by a reduction in wages,

---

* How far the miner might be able to intercept any portion of the reduction before it reaches the consumer is discussed in paragraph 5. (*b.*) (iii.)

(1) Cowey, 7991. J. Wilson, 8729. Woods, 8522. Morgan, 10,856. (2) Paragraph, 7. (3) A. Barnes, 2189. (4) Forster Brown, 14,016. Lamb, 285-8, 353. (5) Forster Brown, 14,017-20, 14,110.

[§ 778 (b.)] or a reduction in royalties, or in both. But, inasmuch as the contract between him and his miners may be terminated at comparatively short notice, whilst his contract with the lessor is for a longer period, the probability is that relief will first be sought by a reduction in wages. If relief cannot be obtained in either way, the only course open is to suspend operations. It was stated that in depressed times, the "colliery best "geographically situated rules the price for the rest." "We know very well," says Mr. E. Cowey, President of the Yorkshire Miners' Association, "that to-day the "colliery which is best situated geographically gains "the trade. We know that in our county there are "collieries which work every day, whilst others only "work three days a week."(1) Mr. T. Forster Brown expressed a similar view. "It is open to argument, "but my view about bad times is this: that in bad "times the selling value of coal comes down to the "price at which the best collieries can produce coal. "As long as they do not make a loss it is worth their "while to go on, and the price is regulated by their "cost or thereabouts."(2) "When times are bad with "an inferior colliery, the owner is in a position to say: "Well, I must have the royalties reduced, and I must "have the wages reduced, and I must do everything I "can to enable me to compete with my neighbour who "is working thick seams. Although he has got a "higher royalty, I cannot compete with him, because "my natural conditions are worse."(3) It is evident that Mr. Cowey and Mr. Forster Brown contemplated the case of collieries in which the royalties do not equalise the natural conditions, and they therefore suggested that in "bad times" the lessee who pays less than the royalty his mine can bear, will undersell his less favoured competitor, by giving up a part or the whole of the special advantage which his lower royalty confers. It must not be supposed that a lessee who enjoys a special advantage will, in ordinary times, permit the consumer to share the benefit of it by a reduction of prices, or the wage earner to enjoy it in the shape of increased wages.(4)

(iii.) *A general reduction of royalties.*

(iii.) We have (in paragraph 4), discussed, from the point of view of the consumer, the probable effects of a general reduction in royalties. It remains to consider how far any general reduction would affect the miner.* A general reduction of royalties might be effected by either a percentage reduction or an equal reduction. Assuming that previous to the reduction, royalties were so adjusted that all collieries competed on an equal footing, a percentage reduction would disturb the equality. For instance, a 10 per cent. reduction would, in collieries where the royalty is 10*d.* a ton, reduce the royalty by 1*d.*, but in collieries where the royalty is 5*d.* it would only bring about a reduction of ½*d.*, giving the former colliery an advantage of ½*d.* a ton. A general reduction of the same amount per ton (*e.g.*, 1*d.*, 2*d.*, &c.) would leave the equilibrium undisturbed. The immediate effect of such a reduction would, of course, be to benefit the lessee, but the evidence shows that a difference of opinion exists as to whether, in the long run, the consumer or the miner would benefit.(5) On the one hand, it was suggested that the benefit would go to the consumer, owing to the competition of lessees, who would be in a position to sell their coal at a price lower than before by the amount of the reduction. On the other hand, several witnesses expressed the belief that the miners would share in the general reduction. Beyond all doubt, were prices to remain unaltered, a general reduction would increase the margin out of which wages and profits come, and the miners might endeavour to obtain a rise in wages. Prompt action on the part of the miners' organisations might possibly intercept the whole or part of the reduction before it reached the consumer. But if prices were to fall by the amount of the reduction, wages would not tend to rise.(6)

(iv.) *The abolition of royalties.*

(iv.) Professor W. R. Sorley, author of "Mining "Royalties, and their Effect on the Iron and Coal Trades," assuming the existence of a minimum royalty, summed up his view of the probable effect of a total abolition of royalties by saying:—(7)

"In brief, my view is this: that what I have called "the minimum royalty might be expected to go to "reduce price, and that the remainder of royalties "charged on all mines paying above the minimum "would go into the pockets of the lessees or em- [§ 778 (b.)]
"ployers." In reply to the question, "Would not the "lessee, who now pays a high royalty, be likely to "reduce the price of his produce by more than the "minimum royalty, when he had no longer to pay any "royalty at all?" he replied, "I think there are circumstances which might induce him to do that to "some slight extent. If trade were in complete equilibrium, so that there was no very great competition "between employers, but they went on producing in, "what we may call, an old-fashioned way, having their "old-established well-known and hereditary customers "perhaps, and supplying them and not interfering "with the business of their neighbours, then I think "what I have previously said would hold exactly, "that there would be a very great advantage to the "lessees of the richer mines, and no advantage to "the lessees of mines who paid the minimum "royalty—I mean of course among mines which "produce the same quality, or pretty nearly the same "quality of mineral. But then there is, of course, the "most active competition for business amongst the "producers, so that an employer might be in competition with another employer or lessee who was paying, "let us say, only the minimum royalty—the first lessee "paying a very high royalty. The first lessee or employer would therefore be able, if he liked, without "being a loser, to reduce the price at which he would "sell by more than the minimum royalty. If we take "the minimum royalty to be 2½*d.*—I am only using that "figure hypothetically—he can reduce the price, let us "say, by 2¾*d.*, or by 3*d.*, or by 3½*d.* Now, if the two "competing employers have been, before royalties were "abolished, working at about just the level of profitable production, it is clear that the person who is "relieved of 2½*d.* cannot afford to reduce his produce "by 3½*d.*, and it is also clear that the person who has "been relieved of 6*d.* or 9*d.* can afford to do that; so "that the person who has been paying a high royalty "may, if he likes, gain the advantage in any case of "competition with a person who has been paying a low "royalty." Mr. Daglish agreed with the above view, namely, that the consumer would be benefited by a reduction in price, equal to the amount of the minimum royalty, at least in depressed times, but in properous times he seemed to think that the whole of the benefit would be taken by the lessees.(1) Assuming the consumer to be benefited by the amount of the minimum royalty, the question arises who would take the remainder. The first point to note is that different districts would be unequally affected. Proprietors who work their own mines could not possibly derive any benefit. Collieries where royalties are low would derive a benefit amounting to a few pence per ton, whilst collieries with high royalties would be benefited to a much greater extent. Mr. Ralph Young (2) pointed out that "some years ago the Northumberland miners were in favour of the abolition of royalties," but "it was found some time after the agitation had gone "on that as the royalties in Northumberland were less "than the average royalty paid throughout the United "Kingdom, and especially by our competitors, that it "would not be an advantage to us as Northumbrians "to go in for abolition." Assuming that the whole of the royalty would go to the lessees, it is to be noted that the lessees of the mines which pay high royalties, and, therefore, where the greatest reduction would take place, would be in a position to drive their less fortunate competitors out of the market.(3) This point was urged very forcibly by Mr. T. Forster Brown.(4) "Supposing "they are abolished altogether, for example, the effect "would be to give a monopoly to the good collieries "both of output and labour, and that would kill the "collieries which had worked their best coals and had "to depend upon thin seams, and so on; and then in "bad times there would be no royalty owner to squeeze "... If there were no royalties the good colliery "would be in a far stronger position in competition "with the bad colliery than it is to-day, because the "lessee of the good colliery would first have got a "larger benefit from the abolition of the royalty, and "then, existing under much better conditions, he would "kill the inferior colliery .... If royalties were "abolished the cost would go that much lower in the "bad times, and therefore the inferior colliery owner "would lose so much more than he does now, and "he would not be able to live, because the lessees of "the good colliery would have, in addition to their

* No general reduction could take place higher in amount than the minimum royalties.

[§ 778 (b.)] "present position, the advantage of the extra royalty "that had been abolished." In short, the whole coal industry would be dislocated by the stoppage of the mines least favourably situated, and the consequent loss of employment on the part of the workers in such mines. But some compensation would result from the employment of additional workers in the mines that obtained the trade. In so far as the lessees of the poorer mines were driven out of the trade, it would be through the lessees of the better mines offering coal at a price that would prevent competition; to the extent of this fall the consumer would derive an advantage, but this advantage would probably be only temporary as it would probably be withdrawn as soon as the lessees of the better mines obtained control of the market. If the miners could obtain a share in the benefit of the reduction the advantage to them would be unequal, varying from district to district, and from colliery to colliery; and in so far as obtained it would diminish the benefit to the consumer.

The effect of royalties upon foreign competition.

779. An impression appears to prevail very widely amongst the miners and other workmen that the royalty system tends to increase the difficulties of the coalowners of this country in competing with foreign producers.(1) The prevalent opinion evidently is that in foreign countries no royalties exist, or that nothing equivalent to a royalty is paid, or that much lower royalties prevail on the Continent than in Great Britain, and that this gives the foreign producer a special advantage. It also appears that the miners believe that the higher royalties in the United Kingdom enhance the price of coal, and, therefore, place us at a disadvantage in the world's markets.(2) The first question to be considered is the amount of royalties levied in foreign countries as compared with the royalties payable in the United Kingdom. Very detailed information regarding royalties or State taxes levied abroad will be found in the 4th Report,(3) and a summary of such information is appended to this Report. We have, however, pointed out that it is not the total, nor even the average, royalty, but only the minimum royalty that enters into price. In so far, then, as foreign competition is a question of price between the coal producers in different countries, it follows that we have only to regard the minimum royalties in different countries. As royalties in the United Kingdom are special to mines, we must, in instituting any comparison between their effects and the effects of royalties and taxes abroad, confine our attention to such foreign taxes as are also special to mines. It is true that in some of the countries that are supposed to compete with us in the coal trade, *e.g.*, Germany, heavy imperial or local taxation is levied (in addition to the special mining taxes) on coal mines, but such taxation is common to all industries. Inasmuch as the effects of local and other forms of taxation in England do not come within the terms of our reference, we do not think it necessary or desirable to examine into the effects of taxes other than special mining taxes in foreign countries. In France the proportional tax of 5 per cent. is levied on the "net produce." This "net produce" is practically the value of the coal at the pit's mouth after the expenses of production have been deducted. When there is no "net produce," no proportional tax is levied. The same principle may be laid down as regards Belgium, excepting as regards some of the special communal taxes. In Prussia the special mining tax is 2 per cent. on the value of the coal sold, the value being calculated at a minimum selling price for the year agreed on by the concessionaires and the Government. It is evident that the amount payable per ton will vary with the minimum price of coal so agreed on. Mr. Mulvany stated that the 2 per cent. tax amounted in 1890, in a leading colliery in Westphalia, to 0·1508, or about 1¾*d.* per ton.*(4) Taking the year 1890, as to which we have the fullest statistics, it would appear that the "minimum royalties"† in the United Kingdom, France, Belgium, and Germany, were as follows:— [§ 779.]

In the United Kingdom, 2½*d.* in Northumberland and Durham; 4*d.* in West Scotland; 3*d.* in East Scotland; 4*d.* in South Wales and about the same in Yorkshire; in Westphalia,* the chief coal producing districts of Prussia, 1¾*d.*; in Belgium‡ less than 1½*d.*, and in France 0. Hence it appears that the minimum royalty in the United Kingdom is substantial in amount; in Germany it varies with the price of coal, but is lower than in this country; in Belgium it is very low, and in France it is practically nothing.(5) There are many collieries both at home and abroad which return a greater profit than the minimum royalty or the minimum charge imposed by the State. This greater profit is received in this country by the proprietor; abroad it is received by the owner of the concession. In neither case does this advantage affect the price of the coal, and no legislation can prevent its existence whoever may be the recipient. We have already referred to the relative production of coal in the United Kingdom as compared with the production in chief continental countries. Notwithstanding the increase of output in France, Belgium, and especially in Germany, the export trade from these countries is but of slow growth, whilst the exports from England have increased at a rapid rate, as will be seen from the following statistics.

Table showing exports of coal from England, France, Belgium, and Germany:—

—	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
England (*b*) - -	23,628,000	24,819,000	26,533,000	29,171,000	29,958,000	30,448,000	29,983,000	31,323,000	34,089,000	36,693,000	38,226,000
France (*a*) (*c*) - -	603,000	601,000	457,000	510,000	500,000	506,000	610,000	585,000	629,000	943,000	941,000
Belgium (*a*) (*d*) - -	4,525,000	4,477,000	4,292,000	4,441,000	4,619,000	4,338,000	4,273,000	4,591,000	4,467,000	4,597,000	4,851,000
Germany (*a*) (*d*) - -	7,236,450	7,458,250	7,631,600	8,705,000	8,816,934	8,955,629	8,655,240	8,781,377	9,460,257	8,847,202	9,145,187

(*a*) Ton of 2,204 pounds.
(*b*) The figures for England are taken from the Government returns relating to trade and navigation, and include "bunker coal." In Table 13 of Appendix VII. will be found particulars for each year supplied by the Board of Trade. These figures exclude coal shipped for steamers engaged in foreign trade.
(*c*) Taken from Statistique de l'Industrie Minerale, 1891.
(*d*) Taken from the Statistical Abstract for the principal and other foreign countries.

These figures may also be thrown into the form of the diagram which is appended. Not only is our total export trade increasing, but it is increasing with France and Belgium, and (notwithstanding the increase in German production) with Germany as well. The shipments of coal in tons to these countries from the United Kingdom for the years 1880 to 1891 have been as follows:—

—	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.
France - -	3,715,762	3,603,514	4,096,953	4,481,426	4,367,333	4,215,555	4,081,343	4,218,885	4,193,185	4,036,920	5,098,250	5,258,346
Belgium - -	280,015	245,310	256,152	282,312	293,549	305,343	288,084	269,794	241,195	276,920	593,281	607,779
Germany - -	2,241,064	2,142,878	2,320,121	2,424,573	2,485,121	2,635,338	2,557,918	2,786,972	3,066,557	3,474,556	3,350,713	4,171,993

(1) Fenwick, 8744. Aspinwall, 8719. (2) Matkin, 9168-77. Haslam, 164. Evans, 10,739. Young, 8932. (3) Appendix, VIII. (4) Hubert, 18,792, 18,857, 18,949, 18,958. Fourth Report, p. 153. Fourth Report, p. 157. (5) *See* Summary of German Mining Law, Appendix VIII. Fourth Report, p. 153. First Report, Appendix, p. 220.

* The average price of coal in Westphalia was, in 1890, 11*s.* 6*d.* per ton. *See* Fourth Report, p. 161.

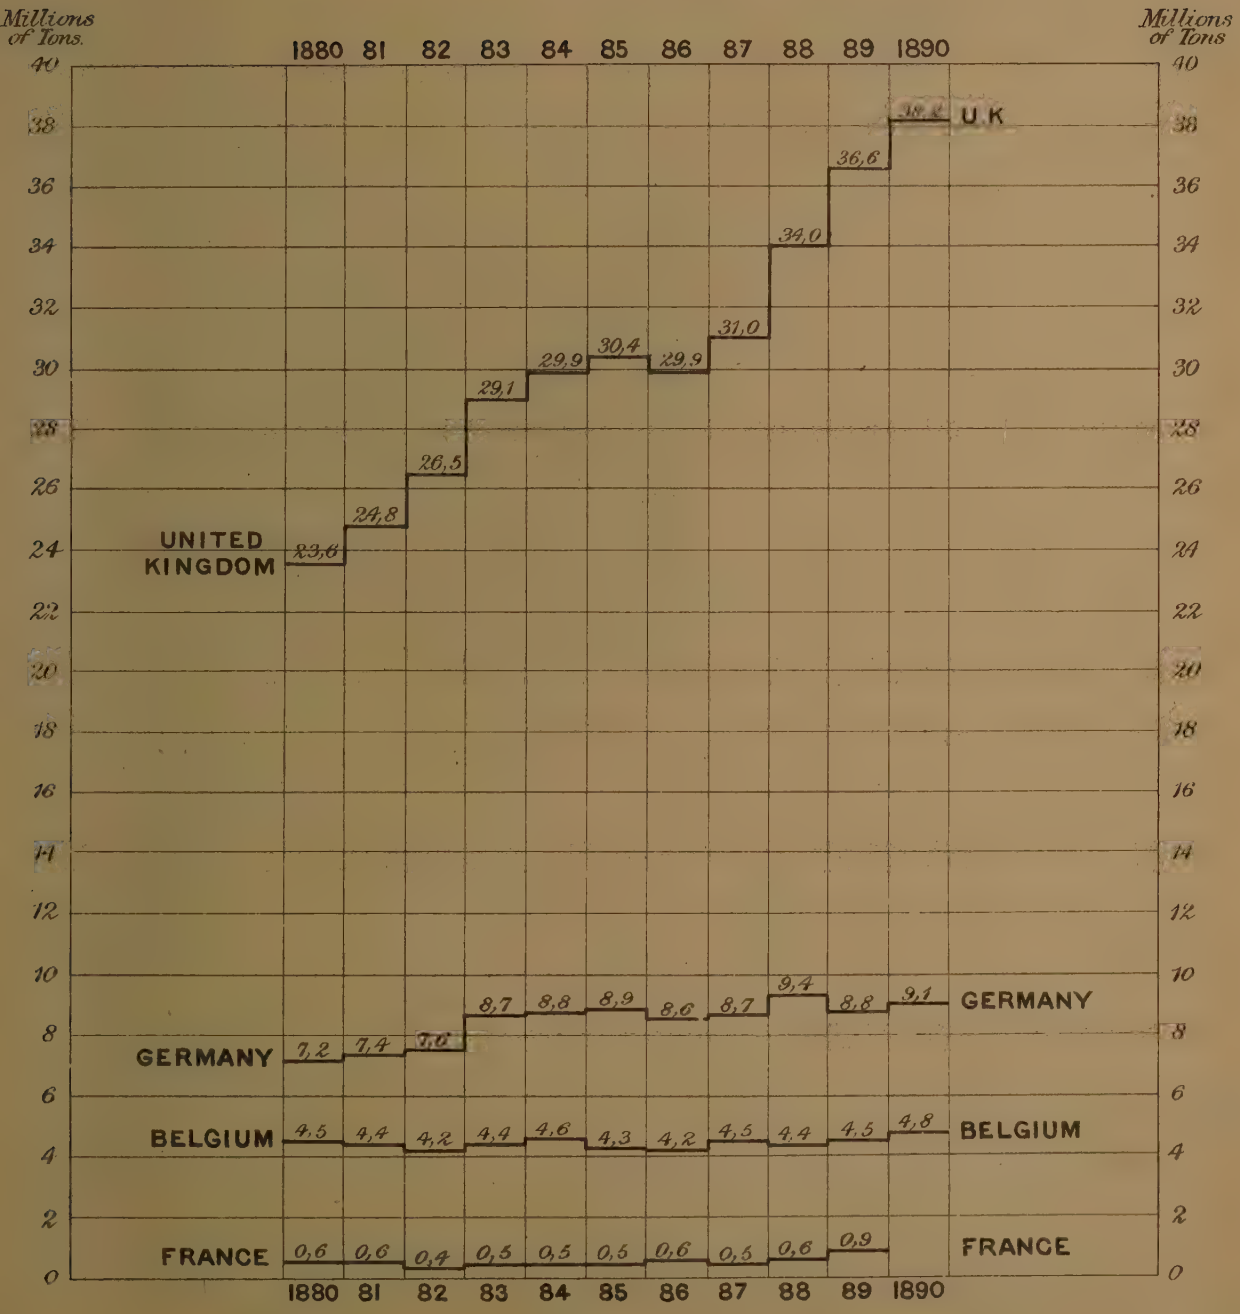
† Minimum royalties here spoken of must be carefully distinguished from the minimum fixed rents usually reserved in leases. *See ante* para. 16. Final Report.

‡ The fixed tax payable in France and Belgium is so small that it may be neglected. But it would seem that some of the special local mining taxes levied in Belgium are payable though no profit be earned. We have not been able to get evidence as to the amount of such taxes per ton, but it may be assumed that they are very low, *i.e.*, less than 1*d.* per ton. *See Hubert*, 18,795-18,800.

DIAGRAM.

SHOWING IN MILLION OF TONS THE EXPORT OF COAL FROM ENGLAND.
GERMANY, BELGIUM AND FRANCE, DURING THE YEARS 1880 TO 1890.
(See Table para 779)

(00,000 omitted)



Judd & Co Ltd; Lith. 63, Carter Lane, Doctors' Commons. (5444. 9/12/93.)

[§ 779.] The following table gives the exports of coal from the United Kingdom to other countries in 1880, 1890, and 1891 respectively:—

Countries.	1880.	1890.	1891.
Russia	1,504,000	1,493,000	1,502,000
Sweden and Norway	1,317,000	2,315,000	2,439,000
Denmark	864,000	1,352,000	1,437,000
Holland	498,000	527,000	776,000
Portugal, Azores, and Madeira	339,000	627,000	624,000
Spain and Canaries	900,000	1,904,000	1,982,000
Italy	1,535,000	3,912,000	3,551,000
Turkey	289,000	431,000	393,000
Egypt	652,000	1,539,000	1,578,000
Brazil	359,000	660,000	798,000
Gibraltar	309,000	496,000	406,000
Malta	388,000	575,000	420,000
British East Indies	1,020,000	1,228,000	1,233,000
Other countries	2,508,000	4,043,000	3,905,000
Coal shipped for steamers in foreign trade.	4,926,000	8,096,000	8,536,000

NOTE.—The above particulars include the exports of cinders, coke, and patent fuel.

These figures show that (although the coal industry in this country is under a disadvantage in so far as the minimum royalty is higher in the United Kingdom than similar payments on the Continent) Mr. Forster Brown was fully justified in saying that "our coal is able to "compete successfully in practically all markets." As he points out, the figures show "an enormous advance "in all the shipments to foreign countries, except, "perhaps, in some cases where there are either excep- "tional taxes, exceptional charges introduced, or other "special reasons. Russia seems to be about the only "country to which the export has not largely increased. "To Sweden and Norway the export has increased "very largely. That is the case with Denmark and "Germany even; although the Germans have developed "their own coalfields, yet the export to Germany has "increased. The export to France has very largely "increased."(1) We have already pointed out that as far as royalties are concerned it is only the minimum royalty that tends under certain circumstances to affect prices, and therefore foreign competition. But there are other factors that have a most important effect. Amongst these, are the quality of the coal, the difficulties of mining, the means of communication between the mines and the coast, and the rate of freight. Mr. Forster Brown points out that freight is an exceptionally important element, and Mr. Daglish states that some of the freights paid during the three years ending with 1890 to certain ports to which we exported coal varied greatly.(2) To take some important ports to which we export coal, the highest and lowest freights paid from the Tyne during the three years ending June 1890, and the highest and lowest from South Wales during the 3½ years ending June 1890, were as follows:—

	From Tyne.		From South Wales.	
	s. d.	*s. d.*	*s. d.*	*s. d.*
Havre	4 6	to 5 6	4 3	to 7 0
Antwerp	6 3	„ 9 0	—	
Hamburg	4 6	„ 5 6	4 6	to 8 0
Genoa	6 0	„ 10 3	8 9	„ 12 0

These figures show that freights are a much more important consideration in foreign competition, at least where the competition is between British coal and foreign coal not sea-borne, than the royalty in this country. Where the competition is between British coal and foreign sea-borne coal, variations in foreign freights may bring in a disturbing or compensating element.

Nationalisation of minerals.

780. It may be convenient to allude in this place to the feeling which has been expressed by some of the representatives of miners, especially from Scotland, in favour of what is called the Nationalisation of Minerals. This term is taken by those who use it to mean the acquisition by the State of the whole of the minerals of the country, whether worked at the present time or not, and the holding of them for the benefit of the community. Several of the witnesses supported their opinion in favour of the nationalisation of minerals by the expression of a conviction that if the minerals were made national property, and thus brought directly under the control and management of the State, the safety, comfort, and well-being of the miners would be more carefully attended to than in present circumstances; and a portion of the proceeds of the mines might be applied to their benefit in shape of provision for disabled miners and their families and superannuation allowances.(1) It was further urged that mines could be worked more economically than at present; the great number of shafts necessary, owing to the division of properties, would not be required, while the State in leasing out minerals (if it did not work them itself) could impose conditions that would do away with the difficulties that arise from wayleaves, boundaries, and drainage(2). There was no suggestion, except indirectly, and in a very few instances, that the State should allow the minerals to be worked without any payment; on the contrary, it was considered by some that it would be the duty of the State to secure for the public the highest royalty it could obtain, while others thought a "fair value" should be fixed; it was suggested that if the State owned and worked the minerals the State could fix the price of coal in the same way as it fixes the price of a postage stamp, the price to be so fixed as to yield a small profit after paying all expenses; and it was urged that in that case the consumer would be benefited by a reduction in the price of coal, and a stimulus given to the industries of the country; the cost of production, in so far as it depends on the cost of coal, being materially reduced. Mr. Keir Hardie, M.P., however, pointed out that the State could only reduce the price of coal by the amount of the lowest royalty, or at the outside by the amount of such royalty plus the profit derived from mines paying the lowest royalty; to reduce the price lower would tend to close the worst mines, as they would not then yield the cost of production. It was assumed that the State would charge royalties upon a sliding scale so that the conflict believed at present to exist between wages and royalty would cease, and that they would mutually adjust themselves automatically to the circumstances of the market.(3) On the question of the terms and conditions on which minerals should be acquired by the State, a wide divergence of opinion appeared. A few of the witnesses stated that, in the opinion of those whom they represented, the State should take the minerals from their present proprietors without any compensation, on the ground that minerals originally belonged to the Crown, that private property in minerals was therefore an injustice which ought to be remedied, and that the benefit which private proprietors and their predecessors had already enjoyed at the expense of the public should be set against any claim which they might have for compensation. The Glasgow Trades Council passed the following resolution, which was brought to our notice:—"That this Council instruct the secretary to "state to the Commission that they are in favour of "mining royalties becoming national property, without "compensation being given." Mr. Keir Hardie, M.P., said he would allow no compensation "on the general "ground that no one has created minerals, that they "do not belong to any person in particular, but to the "people as a whole." He would, however, make an exception "where widows and children were dependent on royalties for their incomes."(4) When it was pointed out to him that in those colonies where the State had taken the minerals respect was paid to rights already acquired, he replied, "I think they took their traditions "from this country when this country was at its worst, "and perpetuated them there. . . . . The law that "recognised private ownership was made by the men "who were doing the wrong, and they made the law "to suit themselves," and he objected to protection being given to persons who had lent money on the security of the mineral rights, saying "If they were "foolish enough to advance their money on any such "security they would have to take the consequences."(5) But the majority of the witnesses recognised the right of the present proprietors to compensation. Those who denied that right in the abstract expressed the opinion that in cases of individual hardship some consideration should be shown, and especially to those who, in reliance on the existing law, had bought minerals within a comparatively recent time, and it was the general opinion that when either a proprietor or a lessee had sunk money in developing minerals he should be compensated for that outlay.(6) To bring the scheme into full operation within any reasonable period it was thought by some witnesses that it would be necessary

[§ 780.] for the State not only to own the minerals but to work them. This raised another claim for compensation, that of the coal-owner, or lessee, whose capital has been invested in the enterprise of winning and working the minerals; one witness estimated the amount of this compensation at 100,000,000*l.*() The suggestion of the nationalisation of minerals was not approved by other representatives of the miners. Mr. Fenwick, M.P., and Mr. Young (Northumberland) dissented; Mr. Cowey denied that in Yorkshire the suggestion was approved; Mr. Aspinwall (West Lancashire) also disapproved, though he favoured the taxation of minerals with the object of thus making them over to the community; Mr. Haslam (Derbyshire) also dissented, as did Mr. Chambers (Leicestershire). No suggestion in favour of the nationalisation of minerals was made by any of the Associations representing lessees, and those witnesses whom we examined on behalf of lessees, and who were questioned on the subject, expressed a decided preference for the present condition of the law of mineral property.(1) In these circumstances, and as the nationalisation of minerals is only a portion of the larger question of the nationalisation of land, we do not consider that it is necessary for us to discuss it further. [§ 780.]

GEOFFREY DRAGE,
Secretary.

APPENDIX V.

MEMORANDUM ON THE EVIDENCE RELATING TO EMPLOYERS' LIABILITY.

TABLE OF CONTENTS.

	Page
INTRODUCTION	556
I.—WHAT THE LAW IS	557
II.—HOW THE LAW WORKS	557
A.—Cases under the Employers' Liability Act, 1880	557
B.—Contracting out	558
C.—Insurance	560
III.—WHAT THE LAW OUGHT TO BE IN THE OPINION OF THE WITNESSES	561

INTRODUCTION.

781. The relation of employer and workman, as distinguished from the relation of master and servant, was quite unknown to the law until 1875, when the Employers and Workmen Act was passed. The change in phraseology was apparently due to the fact that many "servants" had acquired rights *de facto* that they did not possess *de jure*, and it was consequently difficult to determine whether they were "servants" or whether they were "independent contractors." It was laid down by Lord Justice Bramwell, in Yewens *v.* Noakes, 6, Q.B.D., at p. 532, that the term "servant" was applicable to every person subject to the command of his master as to the manner in which he shall do his work; but this definition was framed for the particular purpose of differentiating "servants" from "contractors," and was not intended as a statement of the degree of subjection implied in every contract of service. Though in every such contract there is implied the subjection of the servant to the command of his master as to the manner in which he shall do his work, in many contracts of service there is implied a great deal more. In some, the master can also dictate what class of work the servant is to do, in others, the mode of life he is to lead, the dress he is to wear, and so on.

782. Originally, no doubt, the subjection of servant to master during the period of his service was absolute. But there has been a constant tendency for servants to acquire greater rights than they originally possessed, and Lord Bramwell's judgment would seem to mark the highest point to which an employé's rights can extend, without raising him above the position of "servant" altogether.

783. Most of the persons whom the Act of 1875 was intended to benefit, were, so to speak, on the border line between servants and contractors. Some of them would fall within Lord Bramwell's definition, while others would fall outside it. For the purpose of that Act, therefore, it was necessary to introduce a fresh term, which should include both these classes. The Act was accordingly intituled, "An Act to enlarge the "powers of County Courts in respect of disputes "between"—not masters and servants, but,—"Employers and Workmen," and a workman was, for the purpose of the Act, defined as "any person, not being "a domestic or menial servant, who, being a labourer, "servant in husbandry, journeyman, artificer, handicraftsman, miner, or otherwise engaged in manual "labour . . . . . has entered "into or works under a contract with an employer ". . . . . and be a contract of service *or a* "*contract personally to execute any work or labour.*"

784. The concluding words were intended to cover such employés as could not be brought within the definition of "servant," as stated above. In another section of the Act, however, seamen and apprentices to the sea service are expressly excluded.

785. For the purposes of the Employers' Liability Act, 1880, the definition of "workman" here laid down is retained, but extended to include "railway servants," *i.e.*, such railway servants as cannot be described as "engaged in manual labour."

786. The introduction of the new term "workman" has not done very much to make the *status* of an employé more easily ascertainable, for the following reasons. First, that it is not a general term. It does not include *every* person who has entered into a contract of service, or a contract personally to execute any work or labour, but only persons belonging to certain trades who have done so. And to differentiate trade from trade, is often more difficult than to differentiate "servant" from "contractor." Secondly, that it is differently defined for the purposes of the different Acts. At present, no doubt, the difference relates principally to the position of railway servants, but it will be considerably accentuated if the Bill now before Parliament becomes law, which enacts—"In this Act the expres- "sion 'workman' includes every person who has "entered into or works under a contract of service "or apprenticeship with an employer in the United "Kingdom, or on board a British ship (*i.e.*, a vessel or "boat of every description), but shall not be deemed "to include members of a crew of a fishing vessel "where such members, though not part owners, are "joint adventurers with the owners." And in another section, "This Act shall not apply to servants in the "Naval or Military service of the Crown, but, subject "as aforesaid, shall apply to a workman in the em- "ployment of the Crown in like manner as if the "employer of the workman were a private person."

787. A further point worthy of notice is that, though many of the "workmen" to whom the Act of 1880 applies are not "servants" in the eye of the law, but "persons who have contracted personally to execute "any particular work or labour," it is held that such persons can take advantage of that Act only on the assumption that their contract is a contract of service. Thus, the doctrine of common employment—or, more accurately, the doctrine of common service—is held to apply, for the purposes of the Act, not only to masters and servants, but to employers and workmen as well.

788. Finally, it appears expedient to refer to a point made by Sir Godfrey Lushington in his memorandum on employers' liability, regarding the manner in which the Act of 1880 has modified the doctrine of common employment. The Act does not define the doctrine in question, and state that it is to be inapplicable in

(1) Dagger, 17,279. Smillie, 6049. Steele, 6902. Small, 7052. Small, 7061.

(1) Fenwick, 8823. Cowey, 8064, 8109. Aspinwall, 8670. Haslam 8216. Young, 9041. Chambers, 13,844-7. Lamb, 180. Adamson, 608.

[§ 788.] certain cases, but says: "Where, after the commence-
" ment of this Act, personal injury is caused to a work-
" man . . . . . the workman
" . . . . . *shall have the same right of*
" *compensation and remedies against the employer as if*
" *the workman had not been a workman of, nor in the*
" *service of the employer, nor engaged in his work.*"
Sir Godfrey Lushington pointed out that these words did more than merely abolish the doctrine of common employment, for, apart from that doctrine, liability for negligence at common law was not so great in the case of an employé as in the case of a person "not in the service of the employer." Indeed, the liability varied according as the plaintiff was a servant, a contractor, a licensee, an invitee, or a volunteer.

789. It is proposed in the following paragraphs to give as concise a statement as possible of what the law is, how the law works, and what, according to the witnesses, the law ought to be. That statement is based on the assumption that the Bill now before Parliament will not have become law before this memorandum is in the hands of the Commission.

PART I.—WHAT THE LAW IS.*

790. An employer is a person or body of persons, corporate or unincorporate, towards whom another person stands in the relation of servant, workman, or independent contractor.

791. The employer of a servant is also called a master.

792. A servant is a person bound to conform to all his master's orders during the period of his service, or with respect to the process of his work.

793. The term "menial servant" includes all servants whose main duty it is to do actual bodily work for the personal comfort, convenience, or luxury of their master, his family, and guests.

794. A domestic servant is a menial servant residing in the master's dwelling-house.

795. The term "workman" is applied to servants and to persons who have contracted to personally execute any work or labour in certain specified employments.

796. A contract of service is a contract whereby the relation of master and servant is created.

797. An independent contractor is a person who has contracted to produce a certain result, but is not bound to conform to his employer's orders with respect to the process.

798. An employer or master is liable for injuries due to these acts, neglects, and defaults of his workman or servant in the course of the employment.

799. This, under certain conditions, may include wilful acts and defaults, such as assault and fraud; but for the present purpose Employers' liability may be taken as being practically part of the law of negligence.

800. Negligence means failure in the duty of taking such care as may reasonably be required in the circumstances of the case.

801. One of the "circumstances of the case" is the position of the person injured by the negligence, be he servant, contractor, licensee, invitee, or volunteer.

802. In an action for negligence, the burden of proof lies on the plaintiff, who, accordingly, has to show—
(*a*) negligence;
(*b*) injury as the consequence of negligence.

[§ 803.] 803. Compensation for negligence is measured by the extent of the mischief which the defendant's negligence has caused to the plaintiff.

804. Defences to an action for negligence are ordinarily—
(*a*) no negligence, but accident;
(*b*) acquiescence;
(*c*) contributory negligence.

805. Acquiescence is the defence when the plaintiff voluntarily encountered the risk.

806. Contributory negligence is the defence when the injury suffered by the plaintiff was due to his own negligence as the immediate or decisive cause.

807. An action for negligence can be maintained, in case of fatal results, by the personal representatives of the deceased plaintiff. This is a statutory right under an Act commonly called Lord Campbell's Act, with subsequent amendments of detail.

808. Every person is responsible for his own personal negligence.

809. An employer is responsible also for the negligence of his workmen, if acting within the scope of their employment, but the employer's responsibility does not relieve the workmen of their personal responsibility, and, except as hereafter stated, it does not exist where the plaintiff is also a workman in the same employment as the negligent workman.

810. The absence of the employer's responsibility in this last case is called the doctrine of common employment. This doctrine is of quite modern origin.

811. In an action for negligence, brought by a workman against his employer, the defences, therefore, are—
(*a*) no negligence, but accident;
(*b*) acquiescence;
(*c*) contributory negligence; and
(*d*) common employment.

812. Where the plaintiff is a railway servant or a workman engaged in manual labour, not being a menial or domestic servant, and not being a seaman or apprentice to the sea service, and where the negligent workman in the same employment is a foreman, and where the circumstances correspond to one or other of the five classes of circumstances specified in the Act of 1880, then the plaintiff is given the same right of action as if he had not been a workman of, nor in the service of the defendant, nor engaged in his work.

813. This right is a statutory right, and can be exercised only subject to certain restrictions which do not apply to actions for negligence at common law.

814. These restrictions affect the amount of compensation recoverable, the limit of time for the recovery of compensation, the tribunal before which the action may be tried, and the mode of serving notice of injury.

PART II.—HOW THE LAW WORKS.

A.—CASES UNDER THE EMPLOYERS' LIABILITY ACT, 1880.

815. The extent to which workmen have enforced, or attempted to enforce, claims under the Act by proceedings in the law courts has been thus summarised by Sir Godfrey Lushington from the Parliamentary Returns, 1884, No. 151; 1885, No. 320; 1880, No. 226; 1888, No. 290; 1889, No. 303; 1890, No. 336; 1891, No. 337.

*816. It must not be supposed that the table exhibits the whole of the operation of the Act. In the first place, it takes no account of cases to which the Act could have applied but for the parties having contracted out of it; next, when there is no contracting out no account is taken of cases under the Act not carried into court, though in many of them claims are made and compensation given; and with respect to cases which are brought into court, though the table states the total of the claims made, the amount awarded does not include compensation paid under compromise effected out of court after action brought, but before adjudication.

817. Still less can the number of plaints be taken as fairly representing the number of injuries caused by the negligence of foremen. The truth is that, to the workmen, litigation under the Act has more than its usual terrors. It is not merely that litigation is expensive, and that he is a poor man, while his employer is comparatively rich. It is that, when a workman goes to law with his employer, he, as it were, declares war against the person on whom his future probably depends; he seeks to compel him by legal force to pay money, and his only mode of doing so is the odious one of proving that his employer or his agents, his own fellow workmen, have been guilty of negligence. Add to this that the legal proof of such negligence is often extremely difficult. The broad result is that a legal claim for damages only answers where the injury is very great, and the workman is prepared to leave his master's service. It is quite unsuitable as a remedy to meet the common case of a trifling injury which befalls a workman in the course of his employment and temporarily disables him. Wherever the service is good, as is that of a railway company, for instance, a man who enters it comes to stay, and it would never be worth his while to institute legal proceedings against his employer for small damages for a slight accident when the result would be to make unpleasantness for himself, and possibly to endanger his continuance in the service.

[§ 817.]

B.—CONTRACTING OUT.

818. By contracting out is meant an arrangement between employers and employed, whereby the latter renounces the right conferred on him by the legislature (and often also his right under the common law) to be indemnified for injury, the result of negligence. The usual consideration given by an employer to his workmen for "contracting out" is a contribution to their accident insurance fund, and these funds sometimes pay compensation for accidents in respect of which the employer would not be liable either at common law or by statute. The Act of 1880 does not prohibit contracting out, and a court of law has declared the practice to be legal.

819. The evidence affords no instance of "contracting out" being enforced without some consideration other than the mere fact of employment being given by the employer, and, at present, the practice does not appear to have resulted in any pecuniary loss to the workmen. The following statement, prepared by Sir Godfrey Lushington, shows the extent to which "contracting out" has been resorted to in the various industries. It is based upon the evidence given before the Select Committee of 1886, supplemented by that taken before the Royal Commission on Labour.

820. *Mining.*—The majority of miners have not "contracted out," and object to doing so, and even to being allowed to do so. This is the official view of the Central Board of the Miners' National Association, representing 200,000 miners. But there is a strong minority who have contracted out, and who resent any proposal to deprive them of their liberty in this matter. Official statistics are wanting; the following were forwarded to the Select Committee by the Central Association for dealing with Distress caused by Mining Accidents, an association which, in 1885, represented 209,306, and, in 1891, represented 268,985 miners. This association is itself neutral on the question, as it is open to the relief societies in affiliation with it to contract out, or not, as they please; some do and others do not. In most districts (through the operation of the miners' trade union, or the influence of the mine owners) there is a uniform rule for all the men of the same pit, if not for all the men of the same county, that they should or should not contract out. Thus, West Lancashire is mainly and North Wales almost exclusively a contracting out district, whereas in Yorkshire, Cleveland, and Northumberland, there is very little, if any, contracting out. In South Wales, however, there is no rule at all. There the majority do not contract out, but there is a large minority who do, and those who do work in the same pit side by side with those who do not.

821. *Railways.*—The London and North Western Railway Company, on the passing of the Act of 1880, gave to the men in their employ the option of contracting out in return for certain contributions to be made by the Company to the men's insurance fund. The men, with very few exceptions, accepted these terms, and for all who have since joined contracting out is the rule of the service. The Company has now in their employ over 50,000 men, all of whom have contracted out; and a large number of these men have petitioned Parliament against any change in the law which might prevent them from doing so. The London and North-Western Railway Company is the only railway company in which contracting out is the obligatory rule of the service.

822. In the London and Brighton Railway Company, the men do, as a matter of fact, contract out; but, on a month's notice, any man can regain his legal position without leaving the service, simply by renouncing the insurance benefits. Very few have thought it to their advantage to do so. In the Great Eastern Railway Company the men do not contract out; but, if a man claims and obtains damages by legal process, there is a certain deduction made from the Company's contribution to the men's insurance fund. In all other railway companies there is no contracting out.

[§ 823.] 823. *Other Trades.*—Throughout the building trade there is no contracting out; and Mr. Shipton, the Secretary to the Amalgamated Society of House Decorators, represented to the Select Committee that contracting out should be prohibited. In the trades connected with the Iron Trades Employers' Association, representing the employment of 50,000 men, spread over 18 districts, with their centre in Manchester—that is, the trades of general engineering, steam boiler making, textile machine making, and iron and brass founding—there is no contracting out. In the large alkali works of Messrs. Chance, and in the ironworks of Messrs. Pearson and Knowles, the men do contract out. As to other trades, there is no evidence that there is contracting out.

824. No case was established before the Select Committee or the Royal Commission on Labour of workmen contracting out for no consideration. But where there is contracting out, it is usually made the rule of the service; and this, it was stated in general terms, means coercion. The reply made by employers was to point to the benefits conferred on workmen contracting out, to the numerical strength of the persons alleged to be so coerced, and to the number of persons contracting out in places, like the South Wales coal-field, where it was not the rule of the service.

C.—INSURANCE.

825. Insurance against accidents in trade is allowed to exist side by side with the law relating to employers' liability. It may be effected (*a*) by men's relief societies, to which the men alone contribute; (*b*) by men's relief societies, to which both men and masters contribute; (*c*) by insurance companies; and (*d*) by masters' mutual assurance societies.

826. With reference to the first class, Mr. Brabrook, the Chief Registrar of Friendly Societies, explained that such societies were independent friendly societies, affiliated orders, dividing societies, shop clubs, trade societies, collecting societies, and the trade unions themselves; but his evidence on this point had no immediate bearing upon the liability of employers, and may here be dismissed with a passing reference.

[§ 827.] 827. Concerning societies of the second class, which generally exist where the workmen have contracted out of the Act, Mr. Brabrook gave the following information: —"A large number of these societies," he said, "are "debarred from registration under the Friendly "Societies' Act, because they have among their rules "one providing that 'a member ceasing to be em- "'ployed at works, shall cease to be a "'member of society.' By means of such a rule, an "employer can enforce restrictive conditions on the "conduct of his business by the workmen. A rule, "however, to the effect that 'a member ceasing to be "'employed at works shall cease to participate "'in the funds arising from the contributions of "'employers as honorary members,' does not prevent "registration, although a practical difficulty arises in "cases where the funds derived from the contribu- "tions of employers and employed respectively "cannot be distinguished. Another arrangement "inconsistent with registration is one whereby the "funds of the society are deposited with the employer, "inasmuch as the Friendly Societies Act requires "them to be invested only in concerns giving such "security as trustees can accept. The policy of the "Act in this respect is a sound one, for the prohibited "arrangement has the mischievous effect of putting "all the workmen's eggs into one basket, so that if "their employer fails, they lose not only their "employment but their past savings also, and it "places them, in addition, into a position of undue "dependence upon the employer. At the same time, "the societies often prefer to forfeit registration by "investing their funds with an employer, either "because they get an exceptionally high rate of "interest, or because they like to have a stake in the "employer's business, or because much trouble is "saved in the matter of buying and selling stock and "in the keeping of accounts. Where the employer "in question is a public company, and, as such, "able to give by debenture or otherwise security "of the type which trustees are authorised by "statute to accept, the difficulty as to registration "is removed. A third bar to registration is where "membership of the society is made a condition of "employment. But registration has not hitherto "been refused to societies having among their rules "one providing that members may direct the "amount of the subscription to be deducted from "their wages, provided that the sum deducted be "actually handed over to the society's treasurer, and "paid by him to the credit of the trustees. The "general result of the legal requirements as to regis- "tration has been to cause many societies to forego "its benefits. Those benefits are conferred rather "upon the individual members than upon the society "as a whole. They relate to the right of members "to inspect the books of their society, to apply to the "Chief Registrar for an official inspection, to call "upon the treasurer and trustees to render accounts, "&c., &c."

828. Referring to the same class of societies, Mr. Ludlow, the former Chief Registrar of Friendly Societies, said:—"Judging from the condition of the mining in- "dustry, the existence of a friendly society in exclusive "connexion with a particular employment, does not "appear to prevent trade disputes. Many railway "companies have obtained special Acts of Parliament "compelling the men to subscribe to the sick and "benefit funds established by their employers. The "men object to such enactments, because they are "obliged to choose both between giving up their own "societies and supporting two, and also between "continuing in the company's service longer than they "may perhaps desire to do, and forfeiting the benefits "towards which they have been subscribing. The "Court of Appeal, however, decided, in Hewlett *v.* "Allen and Sons, that deductions from wages for the "purposes of benefit funds were illegal, unless "expressly sanctioned by Act of Parliament. Except "where absolute confidence already exists between "employers and employed, the existence of funds "supported by both parties tends not to improve, but "to injure the relations between them. Such funds, "moreover, are in many cases actuarially unsound, "because they depend upon the employers' contribu- "tions, which in their turn, depend upon the vote of a "body of shareholders, and because the employers' "contributions remain fixed, irrespective of fluctua- "tions in the membership. Where the employers' "contributions vary with the membership, the funds "are financially sounder. Personally, I am adverse to "the practice of contracting out of the Employers' "Liability Act, which usually accompanies the "establishment of those funds. If the Act be good, "it should be relied on."

829. The best instance of an insurance company is the Employers' Liability Assurance Association. This association issues two kinds of policies.

(*a.*) Separate policies in which the employed have no part. The company insures the master only against such accidents as the master is liable for; not, however, against accidents caused by the master's personal negligence, and, before insuring, the association makes inquiries to ascertain that the master is careful, &c.

The figures* are:—

Total number of accidents reported	10,217
Of these no claim is made in 76 per cent., or	7,750
Total number of claims	2,467

Thus accounted for:—	
Claims admitted	1,188
Claims abandoned	952
Claims litigated	327
Total	2,467

Of the 327 litigated cases there were:—	
Won by workmen	136
Lost by workmen	191
Total	327

Also of the 327 litigated cases there were:—	
Appealed by master	35
Won by men	29
Won by master	6
Total	35
Appealed by men	32
Won by men	9
Won by master	23
Total	32

* The figures are taken from Appendix D. of Sir Godfrey Lushington's memorandum, where no mention is made of the period to which they apply. In fact, the whole of paragraphs 829-32, inclusive, is transcribed from that memorandum, with but few slight alterations.

[§ 829.]

(b.) Joint policies, in which employers, in the first place, pay the entire premium, but to a certain extent recoup themselves by a deduction from the men's wages; in this way the men contribute, and, by the policy, the insurance company undertake to indemnify the workmen against all accidents whatever. There is no contracting out.

As to these policies the statistics* are :—

Total number of accidents reported -		26,188
Of these there were—		
Claims admitted -	26,087	
Claims abandoned	97	
Claims litigated about - -	4	
Total - -	26,188	

Had these policies been separate instead of joint, the company, instead of paying on 26,087, would probably have paid only on 3,026, which might represent the number of accidents for which the employer might be held liable. The insurance company, however, do not provide relief beyond a certain limited time.

830. The Iron Trades Employers' Association, spread over 18 districts, with its centre in Manchester, and representing the employment of 28,000 men, engaged in general engineering, iron shipbuilding, marine and locomotive engineering, steam boiler making, textile machine making, and iron and brass founding, is an association in which the members mutually insure each other against claims made under the Employers' Liability Act, 1880; the only object is to cover expenses. For the period between October 1881 and May 1886 the statistics were :—

Number of notices received of injuries - -		788
Number of claims compensated by agreement -	81	
Number of claims litigated and lost by men - -	6	
Number of claims litigated and won by men - -	3	
Remainder arranged between employed and the individual employer, without reference to the association - - -	698	
Total - - -	788	

The rates of insurance were threefold :—

	Per cent. of Wages in the First Year.
	s. d.
Machine makers (who have small machinery) -	1 3
Engineers (with larger machinery) - -	1 9
Shipbuilders who work out in the open and have a great deal of scaffolding.	2 3

831. In the building trade the masters have formed a mutual insurance society, each paying 4*s.* for every 100*l.* of wages. In the south district, comprising London and counties south of Birmingham, during the five years 1881 and 1885, the average number of policies in force was 290, and the total number of cases (accidents) reported was 1,315, of which 349 were settled as under :—

How settled.	Amount.	No. of Cases.
	£ s. d.	
Settled without intervention of solicitors for - - -	2,416 14 2	245
Settled after notice of action for	1,952 4 2	62
Contested claims being made for 6,727*l.* :—		
In 20 of which damages were awarded for -	1,607 7 6	42
In 22 the verdict was for defendant - -	—	
Total - -	5,976 5 10	349

* Here again no mention is made of the period to which the figures apply.

[§ 832.]

832. In Northumberland and Durham mines the owners have a mutual assurance association. In five years their premiums amounted to 2,000*l.*; if they had contributed to the men's fund, their contributions would have amounted to 50,000*l.*

PART III. — WHAT THE LAW OUGHT TO BE IN THE OPINION OF THE WITNESSES.

833. Mr. W. Becket Hill, of the firm of Messrs. Allan Bros. & Co., shipowners, considered that employers should be held responsible for such accidents only as resulted from their personal negligence, from the orders given by themselves or their representatives and from defective gear, on the ground that the injured man had the actual tortfeasor to fall back upon.

834. Mr. S. Sims, representing the Amalgamated Stevedores' Labour Protection League, desired section 1, sub-section 2, of the Act of 1880, to read as follows :— "By reason of the negligence of any person in the "service of the employer who has *any* superintendence "entrusted to him." The ground of the proposal was that it was not sufficient to limit the employers' liability to the negligence of "persons whose sole or "principal duty is that of superintendence, and who "are not ordinarily engaged in manual labour."

835. It was the opinion of Messrs. G. J. Davis and F. Chandler, representing the Amalgamated Society of Carpenters and Joiners, that the principal employer should be held liable even where the work in connexion with which the accident occurred is sub-let. The reason given was that the sub-contractors were often men of straw and unable to pay compensation.

836. Mr. Salter, representing the Dockers' Union, considered that employers should be held responsible in all cases where contributory negligence was not proved.

837. A large number of the men's representatives were of opinion that contributory negligence should no longer be a bar to the men's claims under the Act. Petty negligence, they contended, should no longer be allowed to excuse the grave negligence to which it might contribute.

838. The men's representatives were almost unanimous in condemning the doctrine of common employment, as virtually making the Act of 1880 inoperative. Mr. R. Knight, of the Boilermakers' and Iron Shipbuilders' Union, was an exception to the rule. He thought there would be some difficulty about eliminating the doctrine of common employment altogether. The employers were all opposed to the abolition of the doctrine, which they contended was the only contradiction to the growing idea that employers were general insurers against accidents.

839. An almost equal number of the men were opposed to employers being allowed to insure themselves against their liability. A poor man, they urged, had no chance against the insurance companies in the law courts, and was ruined by the excessive litigation in which they involved him. Mr. Falvy, of the South Side Labour Protection League, said that, even if insurance were permitted, the companies should, at any rate, be compelled to satisfy the verdict if their clients were defeated.

840. It appeared to be the almost universal policy of the trades unions to oppose the practice of "contracting out," and of the employers to support it. The latter stated that in no case did contracting out prevail without ample consideration being given by the employer. The representatives of the former did not dispute the fact, but pointed out that the men's organisations were weakened when their members had an interest in funds over which they themselves had no control, and that if the unions were weakened now, the men would suffer for it hereafter.

841. Mr. Keir Hardie, the late President of the Ayrshire Miners' Union, desired employers to be made criminally liable for accidents due to their own or their servants' negligence, and be punishable by imprisonment, instead of by a money penalty. He argued that at present employers did not personally feel their liability at all, and were, therefore, careless.

842. A variety of other proposals were made, with a view to making the benefits of the Act more widely and easily accessible. Thus, it was proposed to extend its application to seamen, to remove the legal limit to the amount of compensation, to forbid employers from offering, and the employed from accepting, compensation before the case was taken into court, to extend the

[§ 842.] period of notice and the period within which the action must be commenced. It was further proposed to allow either party to apply to a Government department to take up the case free of charge, to cancel the right of appeal from a county court to a higher tribunal, except where a large sum of money was at stake, and to appoint working men inspectors of dock machinery with administrative powers under the Act.

843. It is possible to detect a feeling in favour of a policy the direct contrary of that which prompted the proposals hitherto mentioned, in the evidence of Mr. Davis, of the Amalgamated Society of Carpenters and Joiners, who said:—"I hold that the only just and "lasting settlement of the question is to place the "whole affair under the common law, even though it "were to deprive the workman of the privilege he at "present possesses of getting compensation (from his "employer) for accidents resulting from the negligence "of his (superior) fellow servants." The argument on which this proposal was based seemed to be that the more liability for accidents was dissociated from negligence, the more careless did negligent persons become. [§ 843.]

GEOFFREY DRAGE,
Secretary.

APPENDIX VI.

MEMORANDUM ON THE EVIDENCE RELATING TO THE COAL MINES REGULATION ACT, 1887.

TABLE OF CONTENTS.

	Page.
INTRODUCTION	562
I.—WHAT THE LAW IS	563
II.—HOW THE LAW WORKS	563
III.—WHAT THE LAW OUGHT TO BE IN THE OPINION OF THE WITNESSES	563

INTRODUCTION.

844. Mr. M. W. Peace has prefaced his edition of the Act with observations to the following effect:—The law relating to coal mines has at last received a definite solution by the passing of the Coal Mines Regulation Act, 1887, which repeals all previous enactments for the regulation of coal mines, so we must look to it, as from the 1st January, 1888, for the law on the subject.

845. It applies to the whole of Great Britain and Ireland, and embraces within its authority mines of coal, stratified ironstone, shale and fire clay. Should there be a doubt whether any particular mine is comprehended, the Secretary of State has power to decide the question otherwise than in legal proceedings.

846. For the purposes of Government inspection, these mines are divided into the following districts:—

1. Manchester district, comprising North and East Lancashire and Ireland.
2. North Staffordshire district, comprising North Staffordshire, Cheshire and Shropshire.
3. Midland district, comprising the counties of Derby, Leicester, Nottingham and Warwick.
4. Yorkshire and Lincolnshire district, comprising Yorkshire, exclusive of the North Riding and Lincolnshire.
5. Newcastle district, comprising the counties of Cumberland, Northumberland, and part of Durham.
6. Durham district, comprising the county of Westmoreland, part of Durham, and the North Riding of Yorkshire.
7. Liverpool district, comprising the counties of Anglesey, Denbigh, Flint and West Lancashire.
8. South Staffordshire district, comprising South Staffordshire and Worcestershire.
9. South-western district, comprising the counties of Devon, Dorset, Gloucester, Monmouth, Somerset and portions of Brecon and Glamorgan.
10. South Wales district, comprising the counties of Carmarthen, Pembroke, and portions of Brecon and Glamorgan.
11. Scotland, East district, comprising the counties of Clackmannan, Edinburgh, Fife, Haddington, Kinross, Linlithgow, Perth, Sunderland, the upper and middle wards of Lanark, and part of Stirling.
12. Scotland, West district, comprising the counties of Argyle, Ayr, Dumfries, Dumbarton, Renfrew, and portions of Lanark and Stirling.

847. The inspector in charge of each of the above districts has also a district or districts assigned to him under the Metalliferous Mines Regulation Acts, and there are two special inspectors under those Acts for North Wales and the Isle of Man, and for Cornwall and Devon respectively.*

848. Under the Coal Mines Regulation Act of 1887, large responsibilities are thrown upon the various persons employed, as well as upon owners, agents, managers and undermanagers.

849. A *primâ facie* liability for dereliction of duty by any person whomsoever is thrown upon owners, agents, and managers, but summary proceedings against them for offences not committed by them personally can be taken only by an inspector, or with the consent in writing of the Secretary of State.

850. The interpretation clause defines the term "owner," when used in relation to any mine, to mean any person or body corporate who is the immediate proprietor, or lessee or occupier, of any mine or of any part of a mine. It does not, however, include a person or body corporate who merely receives a royalty, rent or fine, from a mine, or who is merely the proprietor of a mine subject to any lease, grant, or licence for its working, or who is merely the owner of the soil and not interested in the minerals of the mine. It is true that any contractor for the working of a mine is subject to the Act as if he were an owner; but this liability of the contractor does not remove the liability of the owner as here defined.

851. The term "agent," when used in relation to any mine, means any person appointed as the representative of the owner in respect of any mine or part of a mine, and, as such, superior to a manager appointed in pursuance of the Act.

852. The terms "manager" and "under manager" are not defined in the interpretation clause, but their qualifications are fully set out in another part of the Act.

853. The statutory interpretation of the word "mine" includes every shaft in the course of being sunk and every level and inclined plane in the course of being driven, and all the shafts, levels, planes, works, tramways and sidings, both below ground and above ground, in and adjacent to and belonging to the mine. But there is a provision to the effect that two or more parts of a mine may be worked separately, subject to the approval of the Secretary of State.

854. The Act is divided into three parts with four schedules annexed.

855. The first part regulates the employment of boys, girls, and women, the mode of ascertaining and paying wages, the appointment and removal of checkweighers, the arrangements as to shafts and communications, the

* Since Mr. Maskell Peace published his book the Cornwall and Devon Mines have been added to the South-Western District (*see* No. 9 above). There is therefore now only one special inspector under the Metalliferous Mines Regulation Acts.

[§ 855.] division of a mine into parts, the enactments as to certificated managers, returns, plans and notices to be given by owners, agents, or managers, with the steps to be taken on the opening, abandonment, or recommencement of a mine or seam, the provisions relating to inspectors and inspection, the formal investigation as to accidents, and provisions as to arbitration and coroners' inquests.

856. The second part is devoted to—

(*a.*) The general rules to be observed in every mine to which the Act applies;

(*b.*) The establishment of special rules for each mine; and

(*c.*) The publication of the Abstract of the Act and the special rules.

857. The third part deals with the penalties for offences and the mode of their enforcement and application. It also comprises certain miscellaneous provisions, including the interpretation of terms and transitory provisions and repeal.

858. The First Schedule relates to the proceedings of boards of examiners, the Second to the maximum fees payable in respect of managers' and under-managers' certificates, the Third contains the form for the annual return in two parts, and the Fourth a list of the statutes repealed.

PART I.—WHAT THE LAW IS.

859. In this Act the term "boy" means a male under the age of 16.

860. No boy under the age of 12 years, and no girl or woman of any age, shall be employed in or allowed to be for the purpose of employment in any mine below ground.

861. A boy of or above the age of 12 years shall not be employed in or allowed to be for the purpose of employment in any mine below ground for more than 54 hours in any one week.

862. Where the amount of wages paid to any of the persons employed in a mine depends on the amount of mineral gotten by them, those persons shall be paid according to the actual weight gotten by them of the mineral contracted to be gotten.

863. But the owner, agent, or manager of the mine may enter into an agreement with the persons employed in the mine authorising deductions to be made from the wages in respect of foreign substances mixed with the mineral contracted to be gotten.

864. The miners paid according to the weight of the mineral gotten by them may, at their own cost, station a person called a "checkweigher" at each place appointed for the weighing of the mineral.

865. A checkweigher shall have every facility afforded to him for enabling him to fulfil his duties.

866. A checkweigher shall not be authorised in any way to impede or interrupt the working of the mine.

867. It shall be lawful for the owner or manager of any mine to agree with the miners to stop the checkweigher's salary out of their wages.

868. Managers must hold first class certificates of competency or of service, and under-managers first or second class certificates either of competency or service.

869. Where the timbering of the working places is done by the workmen employed therein, suitable timber shall be provided at the working place, gate end, pass bye, or siding, or other similar place convenient to the workmen.

870. The persons employed in a mine may from time to time appoint two of their number, or any two persons not being mining engineers, who are practical working miners to inspect the mine at their own cost.

871. No person not now employed as a coal or ironstone getter shall be allowed to work alone as a coal or ironstone getter in the face of the workings until he has had two years' experience of such work under the supervision of skilled workmen, or unless he shall have been previously employed for two years in or about the face of the workings of a mine.

872. No prosecution shall be instituted against the owner, agent, manager, or under-manager of a mine for an offence under this Act not committed personally by such owner, agent, manager, or under-manager, which can be prosecuted before a court of summary jurisdiction, except by an inspector or with the consent in writing of the Secretary of State.

873. The administration of the Act is vested in a Department of the Home Office.

PART II.—HOW THE LAW WORKS.

[§ 874.]

874. On the whole, the Coal Mines Regulation Act, 1887, must be pronounced a great success. Thus, Mr. Jacques, a Northumberland miner of "advanced" views, said, "The legislation we have already has been "of immense benefit to us," and Mr. Keir Hardie, the secretary of the Ayrshire Miners' Union, said, "With a "few trifling exceptions, the provisions of the Act are "quite satisfactory."

875. In some respects, however, the benefits conferred by the Act are not unmixed. Take, for example, the provisions restricting the employment of boys. In many mining districts, the scarcity of boy labour is a very serious problem. How this comes about may be stated as follows:—The actual work of coal-getting is dependent upon the performance of several subsidiary operations, and the proper relative proportion of coal-getters or "hewers" and other labourers must always be preserved, unless the hewers will consent to do some of the less highly-paid subsidiary work for themselves. There is, accordingly, an urgent demand for boy labour in order to enable as many men as possible to be employed as "hewers" and as "hewers" only, as soon as they arrive at man's estate. This demand for boy labour is obviously intensified by the law limiting its supply, and, in spite of the regulations as to hours, it would seem that the Act has, if anything, tended to increase the pressure placed upon the boys employed in mines.

876. Again, the provisions relating to checkweighers leave many loopholes for evasion. Thus, although employers are obliged to allow the men to appoint checkweighers, there is apparently nothing to prevent them dismissing all their hands and offering to re-engage them on condition that any given appointment which they may have made be cancelled. At any rate, this mode of evading the law has been declared legal by the Scotch Court of Session. The words "every facility" moreover seem to be too vague, and so does the clause prohibiting the checkweighers from "interfering with the workmen." The provision giving the workmen the right of appointing two persons to examine the pits has been taken advantage of in only 10 per cent. of the mines in the kingdom. Some of the men's representatives attributed failure to appoint examiners to fear of being "victimised," but the evidence did not show any ground for such fear, and the real obstacle appeared to be the expense. According to Mr. Keir Hardie, the miners "had no mind to undertake duties "that fell primarily upon their employers, and which "the Government inspectors also were well paid to "discharge."

877. By an error of draughtsmanship, the section relating to "inexperienced" men is probably capable of being interpreted to mean that, though "inexperienced" men may not work in solitude, two or more of them may work in company without supervision. Owing, moreover, to the migratory habits of colliers as a class, it is impossible to determine whether candidates really possess the experience required by the Acts which they invariably claim.

878. If it be conceded that the responsibility for the safety of the mines and the observance of the Acts rests primarily upon the colliery officials, and on the Government inspectors only in a secondary degree, the administration of the Acts must be pronounced adequate and effectual. It is true that many complaints were made, but they were obviously due to the desire of the men to make out a case for the appointment of "practical men" to inspectorships.

PART III. — WHAT THE LAW OUGHT TO BE IN THE OPINION OF THE WITNESSES.

879. That "boy" should mean a male under 18 or 21 years. (Advocated by employed.)

880. That no boy under the age of 13 years should be allowed to be employed, or allowed to be, for the purpose of employment, in any mine below ground. (Advocated by employed and school teachers.)

881. That boys should be eligible for underground work at 11. (Advocated by employers.)

882. That boys should be allowed for work underground for 60 hours a week. (Advocated by employers.)

[§ 883.] 883. That the permission extended to employers and employed to enter into an agreement respecting deductions for stone or substances other than the mineral contracted to be gotten should be withdrawn. (Advocated by employed.)

884. That no such agreement should be deemed to exist unless expressly made in definite terms. (Advocated by employed.)

885. That it should be made illegal for an employer to make the removal of a particular checkweigher a condition of employment. (Advocated by employed and inspectors.)

886. That the term "facility" in sub-section 2, section 13, should include the provision of shelter other than that supplied by the pit's head. (Advocated by employed.)

887. That checkweighers should be forbidden to give information to a third party about a man's time or output without that man's consent. (Advocated by employers.)

888. That it should be compulsory, and not merely lawful, for the owner or manager to agree to deduct the checkweigher's salary from the men's wages. (Advocated by employed.)

889. That certificates of competency should be introduced for firemen and roadsmen. (Advocated by employed.)

890. That the words "gate-end, pass-bye, siding, or "other similar place convenient to the workmen," should be omitted from the 22nd general rule under section 49. (Advocated by employed.)

891. That the words "or have been" should be inserted between the words "who are" and the words "practical working miners" in the 38th general rule under section 49. (Advocated by employed.)

892. That the words "or persons" should be inserted after the words "no person" in the 39th general rule under section 49. (Advocated by employed.)

893. That no man should be regarded as "experienced" unless he has obtained a certificate from a joint examining board of employers and employed. (Advocated by employed.)

[§ 894.] 894. That managers should be required to demand from all applicants for employment certificates signed by their previous employer, showing the duration and conditions of their former occupation, and, conversely, that they should be required to give such certificates to all men leaving their service. (Advocated by colliery officials.)

895. That the qualifying period should be reduced from two years to 18 months, and that the experience of six of the 18 should be specialised. (Advocated by colliery officials.)

896. That a manager or overman should be liable to prosecution, without the consent of the inspector or of the Secretary of State being obtained, in respect of the acts done by the "inexperienced" men they may employ. (Advocated by employed.)

897. That the administration of the Act should be entrusted to a special Minister of Mines. (Advocated by employed and a factory inspector.)

898. That a clause should be inserted forbidding the double shift system. (Advocated by employed.)

899. That the number of men and sections that each fireman may superintend should be defined. (Advocated by employed.)

900. That the firemen should be officially subordinated to the Government inspector of the district. (Advocated by employed.)

901. That employers should be forbidden to sell coal at a lower price than would enable them to pay a certain fixed minimum wage. (Advocated by employed.)

902. That a maximum rate of profits should be fixed. (Advocated by employed.)

903. That eight hours from bank to bank should be the maximum daily labour for all underground workers in mines. (Advocated by employed.)

904. That eight hours of coal drawing per day should be the maximum. (Advocated by employed.)

GEOFFREY DRAGE,
Secretary.

APPENDIX VII.

MEMORANDUM ON THE EVIDENCE RELATING TO THE MERCHANT SHIPPING ACTS, 1854–1890.

TABLE OF CONTENTS.

Page.
INTRODUCTION - - - - - - - - - - - - 564
I.—WHAT THE LAW IS - - - - - - - - - - - - 565
II.—HOW THE LAW WORKS - - - - - - - - - - - - 566
III.—WHAT THE LAW OUGHT TO BE IN THE OPINION OF THE WITNESSES - - - - - - 567

INTRODUCTION.

905. The following statements are mainly derived from Stephen's Commentaries on the Laws of England.

906. The Merchant Shipping Acts have chiefly in view, the great national object of promoting the increase of our mercantile marine, of securing its efficiency and discipline, and of affording the sailors all due encouragement and protection. And, in furtherance of these objects, the Acts provide that local marine boards shall be established at certain of the seaports of the United Kingdom for the purpose of carrying into effect the provisions of the law under the general superintendence of the Board of Trade. In every such seaport the local marine board is required to establish a mercantile marine office or offices, under the management of superintendents, whose business it is to afford facilities for engaging seamen by registering their names and characters, to superintend and facilitate their engagement and discharge, to provide means for securing the presence on board, at the proper times, of men so engaged, to encourage the making of apprenticeships to the sea service, and generally to perform such other duties relating to merchant seamen and merchant ships as may be committed to them by the Board of Trade. Examinations also are instituted for persons intending to become masters or mates of foreign-going ships or home-trade passenger ships, before examiners appointed by the local marine board; and no person is to be employed in a foreign-going ship as master, or as first or second or only mate—or, in a home-trade passenger ship, as master, or first or only mate—unless he possesses either a certificate of competency as the result of such examination, or a certificate of service, either of which certificates (according to the nature of the case) is to be granted by the Board of Trade to such persons as it finds to be entitled to them.

907. In addition to these provisions, there are a variety of others, intended for the protection of seamen and for promoting their health and comfort, among which may be noted the following, namely, that the master of every ship, except those of less than 80 tons burthen, exclusively employed in the coasting trade of the United Kingdom, shall, in the case of every seaman whom he carries to sea from any port of the United Kingdom, enter into an agreement with him in a form sanctioned by the Board of Trade, and signed by both master and seaman, setting forth the nature and duration of the voyage, or else the maximum period of the voyage or engagement, and the places or parts of the world (if any) to which it is not to extend, the number and description of the crew, the time at which each seaman is to be on board, or to begin work, the capacity in which he is to serve, and the amount of his wages,

[§ 907.] together with a scale of provisions, regulations as to conduct, and such punishments for misconduct as the form issued by the Board of Trade may sanction, and as the parties adopt.

908. The Acts also provide that no right to wages shall be dependent on the earning of the freight—an innovation upon the common law, which regarded freight as the mother of wages; and that every stipulation on the part of the seaman for abandoning his right to wages, in the event of the loss of the ship, or any right which he may have or obtain in the nature of salvage, shall be wholly inoperative; that all seamen (other than those engaged in the home trade) shall be engaged and discharged, and their wages paid before a marine superintendent, or in foreign waters before a consular officer, and that seamen and apprentices in any ship shall have such space allotted to them as in the Acts is specified, which space is to be kept free from stores or goods of any kind (not being the personal property of the crew in use during the voyage), and is to be securely constructed, properly lighted and ventilated, properly protected from weather and sea, and properly shut off and protected from effluvia caused by cargo or bilge water; also that every ship navigating between the United Kingdom and any place out of the same shall be properly supplied with medicines, to be examined by medical inspectors appointed for the purpose. (No such inspectors have, I believe, been appointed.) Under the Act of 1867 (30 & 31 Vict. c. 124, s. 10) medical inspectors of seamen may be appointed, and these shall, on application by the owner or master of any ship, report upon the fitness of any seaman applying for employment. The Acts also provide that official log-books shall be kept in every ship in such form as is prescribed by the Board of Trade either in connection with, or distinct from, the ordinary log-books; and that in all cases entry shall be made in the official log-books (as soon as possible after the occurrence) of every offence committed, and of every case of illness, injury, or death.

909. Careful provisions have also been made to protect seamen as well as others from the dangers which arise from ships being sent to sea in an unseaworthy and unsafe condition. Thus, in the first place, it is enacted by the 34 & 35 Vict. c. 110, s. 7., that when any seaman or apprentice is proceeded against for deserting his ship, or for neglecting or refusing to join, or for being absent or quitting her without leave, and it shall be alleged by a certain proportion of the seamen belonging to such ship that by reason of unseaworthiness, overloading, improper loading, defective equipment, or for any other reason, she is not in a fit condition to proceed to sea, or that the accommodation therein is insufficient, the court, having cognisance of the case, may inquire into such allegations, and, in case of doubt, may order a survey of the vessel, and the costs of such survey are directed to follow the event thereof. And, by 39 & 40 Vict. c. 80. s. 6., whenever the Board of Trade has reason to believe, on complaint or otherwise, that any British ship is, by reason of the defective condition of her hull, equipment, or machinery, or of her overloading or improper loading, unfit to proceed to sea without serious danger to human life, having regard to the service for which she is intended, the Board may direct that the ship shall be detained for the purpose of being surveyed by some competent person, and on his report the Board may make such further order as it shall think requisite either as to the detention of the ship or as to her release, and absolutely or upon such conditions as the Board may impose. And if upon such survey it is reported by the "Court of Survey," that there was not reasonable and proper cause for the detention of the ship, the Board of Trade is made liable to pay the owner his costs, and also compensation for any loss or damage sustained in consequence of the detention; but, if the report is to the effect that the ship was unsafe, then the Board of Trade is to have its costs from the owner, which costs are recoverable as salvage; and it is further enacted by the 39 & 40 Vict. c. 80, s. 4. that a master who shall knowingly take, and an owner who shall send, or attempt to send, a ship to sea in such an unseaworthy state as is likely to endanger the life of any seaman or other person, shall be guilty of an indictable misdemeanour, unless he proves that he used all reasonable means to ensure her being sent to sea seaworthy, or that her going to sea in an unseaworthy state was, under the circumstances, reasonable and justifiable.

The Acts also provide that the surveyors appointed by the Board of Trade shall ascertain on each voyage a vessel makes that the vessel is properly provided with lights and fog-signals, is supplied with the necessary [§ 909.] number of boats, life-boats, and life-buoys, is fitted with an efficient fire-extinguishing apparatus, is marked with the correct load-line, and is not loaded below such load-line, and that proper precautions are taken in the stowage of grain cargo likely to endanger the safety of the ship.

In addition to the Board of Trade surveyors, there are surveyors appointed by the Port Sanitary Authorities, who have the same powers over all vessels in port as Inspectors of Nuisances have over property on shore.

910. The Merchant Shipping Acts have further provided that there should be in the port of London a "General Register and Record Office for Seamen," and that, as regards every foreign-going ship, the master thereof shall, within 48 hours after her arrival at her final port of destination in the United Kingdom, or upon discharge of the crew (whichever first happens), deliver to the superintendent of the Mercantile Marine Office before whom the crew is discharged, a list containing, *inter alia*, the number and date of the ship's register and her registered tonnage; the length and general nature of her voyage or employment; the names, ages and places of birth of the master, the crew, and the apprentices; their qualities on board their last ships or other employment; and the dates of their joining the ship; and, further, that as regards every home-trade ship, the master or owner thereof shall, every half-year, transmit or deliver to some mercantile marine superintendent in the United Kingdom a similar list for the preceding half-year, and that all such lists, together with other documents in the Acts particularised, shall be transmitted by the superintendents, by whom they have been received, to the Registrar-General of Shipping and Seamen, to be by him recorded and preserved, and produced to any person desirous of inspecting the same; and, in addition to all these provisions, it is further directed that there shall be transmitted by the proper authorities, every half-year, to such Registrar-General a list of all ships which shall be registered in any port in the United Kingdom, and also of all ships whose registers have been transferred or cancelled in such port since the last preceding return.

PART I.—WHAT THE LAW IS.

911. There shall be local marine boards and officers appointed by the Board of Trade for carrying into effect the provisions of the Acts.

912. Every local marine board shall be constituted as follows:—

(*a*) the mayor or provost and the stipendiary magistrate shall be members *ex officio;*

(*b*) the Board of Trade shall appoint four members from persons residing or having places of business at the port or within seven miles thereof;

(*c*) the owners of foreign-going ships, and of home-trade passenger ships registered at the port, shall elect six members.

913. If the Board of Trade or any local marine board have reason to believe that any master, mate, or engineer, is from incompetency or misconduct, unfit to discharge his duties, the Board of Trade may either institute an investigation or direct a local marine board to do so.

914. If any unlicensed person, other than the owner, master, or mate of the ship, or some person who is *bonâ fide* the servant, and in the constant employ of the owner, or a superintendent of a mercantile marine office duly appointed, engages or supplies any seaman or apprentice to be entered on board any ship in the United Kingdom, he shall for each seaman or apprentice so engaged or supplied incur a penalty not exceeding 20*l.*

915. The master of every ship shall enter into an agreement with every seaman whom he carries to sea from any port in the United Kingdom, which agreement shall contain certain specified particulars.

916. In the case of all foreign-going ships, such agreements shall be signed by each seaman in the presence of a superintendent of a mercantile marine office.

917. All stipulations for the allotment of any part of the wages of a seaman shall be inserted in the agreement.

918. A payment under an allotment note shall begin at the expiration of one month, or, if the allotment is in favour of a savings bank, of three months from the

[§ 918.] date of the agreement, and shall be paid at the expiration of every subsequent month.

919. The persons in whose favour an allotment note is drawn may sue for, and recover, the sums due under it.

920. Every agreement between master and seaman shall contain a scale of the provisions which are to be furnished to each seaman, as well as any regulations as to short allowance of provisions or other lawful punishments for misconduct which have been sanctioned by the Board of Trade as regulations proper to be adopted, and which the parties agree to adopt. The inspectors appointed by the Board of Trade shall examine the provisions and water intended for the use of the crew on vessels trading on long voyages, and on the complaint of three or more seamen on any vessel, wherever trading, as to the quality or quantity of the provisions or water on board, that complaint may be investigated by an officer of the Board of Trade, or, in foreign waters, by a consular officer, and, if any deficiencies are then found and are not remedied, the master of the vessel shall be liable to a fine, and the owners to make compensation to the seamen. If, however, the complaint is found to be frivolous, each of the parties complaining shall be liable to forfeit to the owner out of his wages a sum not exceeding one week's wages.

921. Every master shall keep on board proper weights and measures for the purpose of determining the quantities of the several provisions and articles served out.

922. Before any "passenger ship" shall be cleared out, the emigration officers at the port of clearance shall survey the provisions and water required by the law to be kept on board.

923. Certain hospital and medical expenses incurred by the master in respect of seamen invalided abroad may be deducted from the wages; but if the seamen be injured in the service of the ship, the owner shall, at his own cost, provide the necessary surgical and medical advice and attendance and medicine, and pay for the subsistence of the seaman until he is cured, or dies, or is brought back to the United Kingdom. In the event of the seaman's death, the owner shall bear the expenses (if any) of his burial.

924. Every place in any ship occupied by seamen and appropriated to their use shall have for every such seaman or apprentice a space of not less than 72 cubic feet, and of not less than 12 superficial feet, measured on the deck or floor of such place.

925. In every contract of service, express or implied, between the owner of a ship and the master or any seamen thereof, and in every instrument of apprenticeship whereby any person is bound to serve as an apprentice on board any ship, there shall be implied, notwithstanding any agreement to the contrary, an obligation on the part of the owner of the ship, that all reasonable means shall be used to insure the seaworthiness of the ship.

926. If a seaman, after being lawfully engaged, deserts from his ship, he shall be liable to forfeit all or any part of the clothes and effects he leaves on board, and all or any part of the wages which he has then earned, and also, if desertion takes place abroad, all or any part of the wages he may earn in any other ship in which he may be employed until his return to the United Kingdom, and to satisfy any excess of wages paid to any substitute engaged in his place at a higher rate of wages than the rate stipulated to be paid to him.

927. If a seaman, after being lawfully engaged, neglects or refuses, without reasonable cause, at any time during his engagement, to join his ship, or to proceed to sea in his ship, or is absent, without leave and without sufficient reason, from his ship or his duty at any time within 24 hours of the ship's sailing from a port, either at the commencement or during the progress of a voyage, he shall, if the offence does not amount to desertion or is not treated as such by the master, be liable to forfeit out of his wages a sum not exceeding the amount of two days' pay, and, in addition, for every 24 hours of absence either a sum not exceeding six days' pay or any expenses which have been properly incurred in hiring a substitute.

928. If a seaman or apprentice to the sea service intends to absent himself from his ship or his duty, he may give notice of his intention either to the owner or to the master of the ship, not less than 48 hours before the time at which he ought to be on board his ship.

[§ 929.] 929. If a ship, British or foreign, arrives between the last day of October and the 16th day of April, at any port in the United Kingdom from any port elsewhere, carrying as deck cargo any wood goods of a certain specified description, the master of the ship, and also the owner, if privy to the offence, shall be liable to a penalty not exceeding 5*l.* for every 100 cubic feet of wood goods carried illegally.

930. Upon the discharge of any seaman, the master shall sign and give him a certificate of discharge in a form sanctioned by the Board of Trade, specifying the period of his service and the time and place of his discharge.

931. A seaman is not entitled to the rating of an able-bodied seaman unless he has served for four years before the mast.

932. No person not duly authorised by law for the purpose may, without the permission of the master, go on board any ship on its arrival at a port before the seamen lawfully leave the ship.

PART II.—HOW THE LAW WORKS.

933. The immense mass of the legislation relating to merchant shipping and the world-wide diffusion of the industry it controls, makes its administration a matter of some moment and considerable difficulty. The Secretary of the National Amalgamated Sailors' and Firemen's Union made several complaints as to the manner in which the Board of Trade performed its administrative duties, and stated that one of the objects of his organisation was to call the attention of the Board of Trade to infringements of the law.

934. With regard to the composition of local marine boards, he complained that in the majority of cases the Board of Trade nominated shipowners instead of independent persons or persons in sympathy with the seamen, who were certainly indirectly interested in the proper working of these boards. Failing reform in this respect, Mr. Plimsoll suggested that seamen should be enabled to secure the transfer of such cases as concerned their interests from the jurisdiction of the boards to that of either a stipendiary magistrate or the nearest magistrate not a shipowner.

935. It was also pointed out that the Shipping Federation and other corporations and individuals constantly broke the law by illegally supplying men to ships, and Sir Henry Calcraft, of the Board of Trade, considered that it would be impossible to do away altogether with the practice of "crimping," as offences against this law are called.

936. The system of allotment notes was also adversely criticised. It was pointed out that, under the present system, the men were in the habit of getting tradesmen, Jews, and other persons to cash their allotment notes, and that these persons took the first month's payment for themselves and so compelled the persons in whose favour the notes were drawn to wait two months for their money instead of one. Mr. Key, of the Sailors' Union, went so far as to say that the long intervals during which the seamen's wives had to wait for the wages amounted to a premium on prostitution.

937. Provisions formed the subject of much controversy. The law provides that every agreement shall contain a statement of the scale of the provisions to be given to each seaman, and that such scale shall be subject to the general approval of the Board of Trade. The Board of Trade has, accordingly, drawn up a minimum scale, which the men's representatives agreed in condemning; but it was pointed out by the representatives of the employers that the minimum was never taken as a standard, and that the provisions actually provided were, in most cases, superior both in quantity, quality, and variety, to those authorised in the said scale. Indeed, the bill of fare authorised by the Board of Trade was rigidly adhered to only when necessitated by the exigencies of long voyages, and by way of punishment for insubordination, &c. The men's representatives, however, while admitting the truth of these statements in some cases, denied that they held good universally, and added that he considered penal reduction of the men's allowance to be "a very bad plan."

938. It was also pointed out that the local marine boards neglected to avail themselves of their statutory power of appointing medical inspectors of stores. Mr. Plimsoll detailed at some length the sufferings inflicted upon sailors by being obliged to consume food of inferior quality, and referred the Commission to a Blue Book on

[§ 938.] the health of crews, dated August 1876. The representatives of the employers, on the other hand, agreed in declaring that the supply of inferior provisions was quite exceptional, and Mr. Raeburn, who represented the Clyde District Committee of the Shipping Federation, maintained that the real ground for complaint, where any such ground existed at all, was not the bad quality of the food itself, but the spoiling of good food by bad cooking. Mr. T. Scrutton, moreover, who represented the Chamber of Commerce of the United Kingdom, denied the truth of Mr. Plimsoll's allegations, and pointed out that Mr. Plimsoll himself had qualified them by the remark:—"I should mislead "your lordship (the Earl of Derby), if I wanted you "to suppose that that is in existence now." Personally, Mr. Scrutton entertained no objection to the inspection of provisions as a matter of principle, but he contended that there were several obstacles to its more general adoption.

939. With reference to cases of illness, Mr. Manton, representing the National Federation of Fishermen, complained that the Grimsby employers charged the fishermen for the use of the medicine chests placed on board the boats belonging to the North Sea fishing fleet, which charge, he contended, was illegal, inasmuch as the North Sea might fairly be construed as being "a place out of the United Kingdom" within the meaning of the Act.

940. It was the unanimous testimony of the seamen's representatives that the legal requirements as to the sanitary and other internal arrangements on board ships were not fulfilled, although one of them admitted that this was partly due to the slovenly habits of the men themselves. In spite of the provisions of the Acts, paint, liquors, and oil stores were said to be habitually placed in the men's sleeping places, where the ventilation was defective, the protection against wind and weather inadequate, and the general sanitary arrangements positively unwholesome. The representatives of the employers, on the other hand, contended that in all these respects there was a marked and steadily increasing improvement throughout the merchant service, and that, as applied to vessels belonging to first-class firms, the charges of bad accommodation preferred by the men's representatives were quite unfounded.

941. The men's representatives urged that ships were often undermanned, but the employers denied that such was the case; while the men themselves stated that their complaint on this score was mainly motived by a desire to absorb the unemployed.

942. Desertion, formerly a criminal offence, and punishable as such by fine or imprisonment, became, under the terms of section 10 of the Act of 1880, amenable only to a civil action for damages. It was, however, pointed out by Mr. Graffunder, representing the Amalgamated Seamen and Tradesmen's Union, that accessories both before and after the fact continued to be criminally liable under section 257 of the Act of 1854. Some difference of opinion prevailed among the seamen's representatives as to the effect of the Act of 1880 upon the number of desertions, and all the shipowners' representatives concurred in condemning the change in the law then made. They complained that the abolition of the punishment of imprisonment had, in effect, deprived them of all protection against desertions. Theoretically they could get damages from the offenders, but practically they could not do so, because the seamen had no money to pay. Sir Henry Calcraft, however, declared that the re-imposition of the penalty of imprisonment was a sheer impossibility; but, at the same time, he pointed out that a seaman accepting an advance note with the deliberate intention of neglecting to join his ship was still liable criminally for obtaining money under false pretences.

943. Deck cargoes were illegal from 1839 to 1862, when, by a repeal of sections 170, 171, and 172 of the Customs Consolidation Act, they were once more permitted. In 1876, however, the prohibition was revived in the case of timber conveyed during the winter months from foreign or colonial to home ports, with an exception in favour of light wood goods to the height of three feet above the deck. Mr. Plimsoll complained of the habitual reluctance of the Board of Trade to prosecute owners for offences against the law on this point; but Sir Henry Calcraft replied to this charge by submitting a return of the prosecutions undertaken by the Board of Trade between 1883 and 1892 in respect of vessels improperly laden, and stated that the Load Line Act of 1890 had exercised considerable influence in diminishing the length of the seamen's death-roll.

944. The men's representatives complained that the employers granted the rating of A.B. to men that were not legally entitled to it, and Sir Henry Calcraft pointed out that, under the present system, seamen were able to suppress those of their discharges that were not to their credit, and to exchange the good ones among themselves. But he also pointed out that continuous discharges would only be a revival of the old register tickets, which were abolished in 1853, because they proved inconvenient in practice. [§ 944.]

945. Over-insurance was said to be frequently practised. But the employers contended that this was not the case, because it would be "a decidedly losing game."

946. Mr. G. A. Laws complained that the law relating to the presence of unauthorised persons on board ships did not extend to vessels on the point of departure, and that Union pickets were in consequence enabled with impunity to enter the ships and tempt the crew to break their agreements.

947. The Act of 1888, relating to life-saving appliances had, in the opinion of Sir Henry Calcraft, exercised a beneficial influence in reducing the number of lives lost at sea, and Mr. Manton desired it to be extended to fishing vessels.

PART III. — WHAT THE LAW OUGHT TO BE IN THE OPINION OF THE WITNESSES.

948. That the persons nominated by the Board of Trade to sit on local marine boards should be persons not interested in shipping, either directly or indirectly. (Advocated by employed.)

949. That six additional members should be elected to sit on those boards by the properly qualified A.B.'s belonging to the Seamen's Union at each port. (Advocated by employed.)

950. That seamen should be enabled to secure the transfer of such cases as concern their interests from the jurisdiction of the local marine boards to that of the nearest magistrate who is not a shipowner. (Advocated by employed.)

951. That the word "agent" should be inserted in place of the word "servant," in section 147 of the Act of 1854. (Advocated by employers.)

952. That the words "and in the constant employ" should be omitted in the same section. (Advocated by employers.)

953. That seamen should be forbidden, under penalty, to sign on for one ship before they are clear of their engagements for another. (Advocated by employers.)

954. That shipowners should have perfect liberty of contract as to the terms of their engagements with their men. (Advocated by employers.)

955. That shipowners should have perfect liberty to sign their agreements with their employees when and where they please, and without the presence of an officer of the Mercantile Marine Office. (Advocated by employers.)

956. That allotment notes should be abolished and the full wages paid weekly to the seaman's family direct. (Advocated by employed.)

957. That the forms of allotment notes should be sold only by authority of the Board of Trade. (Advocated by employed.)

958. That cashiers of advance notes should be empowered to garnishee the future earnings on proving their claim before a magistrate or the Board of Trade. (Advocated by tradesmen.)

959. That the power of allotment should be extended from one-half to two-thirds of a seaman's wages. (Advocated by employed.)

960. That allotment notes should be made payable also to any registered trade union or friendly society. (Advocated by employed.)

961. That payments under an allotment note should begin at the end of a week. (Advocated by employed.)

962. That the said payments should be made weekly. (Advocated by employed.)

963. That allotment notes should be made payable to any savings bank.* (Advocated by employed.)

* As stated in evidence by Sir Henry Calcraft (Permanent Secretary of the Board of Trade), the Merchant Shipping Act, 1880, section 3, already provides that an allotment may be made on certain conditions, and through certain savings banks named in the Schedule to the Act (see Evidence, Group B., question 14,775).

[§ 964.] 964. That the items of the authorised scale of provisions should be expressly stated in the text of the Act. (Advocated by employed.)

965. That a captain should no longer have the power of inflicting punishment by reducing the allowance of provisions. (Advocated by employed.)

966. That section 31 of the Act of 1855 should be extended to ships that don ot carry passengers.* (Advocated by employed.)

967. That the expenses of sending home seamen invalided abroad should be paid by the shipowners, without deduction from the wages.† (Advocated by employed.)

968. That the wages of seamen invalided abroad should re-commence at the moment they leave the hospital and embark on their homeward voyage, and should continue until the moment of their arrival in the United Kingdom.† (Advocated by employed.)

969. That seamen's hospital and medical expenses incurred abroad should be paid by the shipowners, without deduction from the wages.† (Advocated by employed.)

970. That the minimum accommodation per man should be extended from 72 to 120 cubic feet. (Advocated by employed.)

971. That an open space of not less than 250 cubic feet should be set apart in the forecastle for the men to dry their clothes in. (Advocated by employed.)

972. That no shipowner should be deemed to have "used all reasonable means" to make his vessel seaworthy, unless it is manned according to a specified scale proportioned to its tonnage. (Advocated by employed.)

973. That shipowners should have the same power of arresting the wages of seamen deserting or failing to join in home ports as they possess in foreign ports. (Advocated by employers.)

974. That accessories after the fact in the case of desertions should cease to be criminally liable. (Advocated by employed.)

975. That desertion or failure to join should be once more made a crime and summarily punishable as such by fine or imprisonment. (Advocated by employers.)

976. That desertion or failure to join should be criminally punishable, provided that the deserter had no intention of fulfilling the terms of the articles when he signed them. (Advocated by employers.)

977. That sub-sections 3 and 4 of section 10 of the Act of 1880 should read as follows: "If a seaman or apprentice to the sea service intends to absent himself from his ship or his duty, he may give notice of his intention either to the owner, master, mate, or engineer in charge, or other agent connected with the ship, not less than 12 hours previous to the sailing of the ship, provided that he has been on the articles 24 hours prior to the sailing of the vessel. [§ 977.] Should he have been signed on a lesser period than 24 hours prior to the ships' sailing, three hours shall be deemed sufficient before the time at which he ought to be on board ship. And in the event of such notice being given, the court shall not exercise any of the powers conferred on it by section 247 of the Merchant Shipping Act of 1854." (Advocated by employed.)

978. That masters should be required to give the same notice as the men for cancelling the contract of hiring after articles have been signed. (Advocated by employed.)

979. That seamen should be permitted to cancel their contracts by giving forty-eight hours' notice only when they have a reasonable excuse for so doing. (Advocated by employers.)

980. That deck-loading on both British and foreign ships within the jurisdiction should be altogether prohibited during the winter, and allowed during the summer only to the extent of 3 feet. (Advocated by employed.)

981. That deck loading on both British and foreign ships within the jurisdiction should be altogether prohibited for winter voyages across the Atlantic ocean. (Advocated by employed.)

982. That, in the case of outgoing vessels, the issue of clearance papers should be made contingent upon the requirements of the law as to loading being satisfactorily carried out, and, in the case of incoming vessels, the magistrates should be empowered to confiscate all the timber carried illegally. (Advocated by employed.)

983. That discharges should be exchanged for certificates of competency, similar to those issued to officers, and obtainable by a practical examination. (Advocated by employed.)

984. That it should be made a penal offence to employ as an A.B. a seaman unprovided with such a certificate. (Advocated by employed.)

985. That similar certificates should be issued under similar conditions to firemen, cooks and stewards. (Advocated by employed.)

986. That discharges should be "continuous" *i.e.* should contain a record of the whole of a seaman's career, instead of merely his last voyage. (Advocated by employed.)

987. That section 300 of the Act of 1854, relating to water-tight compartments, which was repealed by the Act of 1862, should be re-enacted. (Advocated by employed.)

988. That the provisions relating to the presence of unauthorised persons on board ship, should be extended to vessels on the point of departure. (Advocated by employers.)

989. That the Merchant Shipping Life-saving Appliances Act, 1888, should apply to fishing boats. (Advocated by employed.)

GEOFFREY DRAGE,
Secretary.

* This is now done in the case of long voyage ships by the Act of 1892.
† Cf. paragraph 923. It would appear that the employed wish the provisions of the Act extended to all cases of sickness.

APPENDIX VIII.

MEMORANDUM ON THE EVIDENCE RELATING TO THE FACTORY AND WORKSHOP ACTS, 1878–1891.

TABLE OF CONTENTS.

	Page.
INTRODUCTION	568
I.—WHAT THE LAW IS	571
II.—HOW THE LAW WORKS	572
III.—WHAT THE LAW OUGHT TO BE IN THE OPINION OF THE WITNESSES	573

INTRODUCTION.

990. Mr. Alexander Redgrave and Mr. J. A. Redgrave have prefaced their edition of the "Factory Acts" with the observations to the following effect:—

991. The first Act which was passed to regulate labour in factories was the 'Act for the preservation of 'the Health and Morals of Apprentices and others 'employed in Cotton and other Mills, and Cotton and 'other Factories' (42 Geo. III. c. 73); and the last Act previous to the consolidating Act of 1878 followed upon the lines of the first Act; it was intituled 'An Act 'to make better provision for improving the Health of 'Women, Young Persons, and Children employed in

[§ 991.] 'Manufactories, and the Education of such Children, 'and otherwise to amend the Factory Acts' (37 & 38 Vict. c. 44).

992. The Act of Geo. III. was, in fact, directed in the first place to the due cleansing of the factories by two washings with quicklime yearly, to the admission of fresh air by means of a sufficient number of windows, and to the yearly supply to every apprentice of sufficient and suitable clothing. It next prohibited night-work, and excessive labour in the day; and, lastly, required all apprentices to be instructed in the principles of the Christian religion, and that those who were members of the Church of England should be examined annually by a clergyman, and be prepared at the proper age for confirmation.

993. These regulations existed upon the Statute Book until repealed by the consolidating Act of 1878; but with the exception of those parts relating to a sufficiency of clothing and supervision of morals, which from the altered character of the system of apprenticeship are now altogether unnecessary, all the main intentions of this statute are carried out by the consolidating Act.

994. The movement in 1802 was sanitary as well as educational; it was the first step in the course of sanitary improvement, and it is to the influence of factory legislation, and to the inquiries into the employment of women and children, that subsequent legislation for the health of towns may be credited.

995. That to which public attention was first called in 1802, was the labour in cotton and woollen factories in which more than 20 persons were employed. It was not until power was employed to move spinning frames, and afterwards looms, that the evils of excessive labour became so painfully evident. Hence legislation first dealt with spinning and weaving factories moved by power. Then with other cognate occupations, in which steam or water power was used,—print-works, bleachworks, dyeworks, and lace factories. Next, in 1864, to certain occupations in which mechanical power might or might not be used; and, lastly, by the Acts of 1867, various enumerated trades were legislated for as factories, and all others as workshops.* These later Acts, embracing within their far-extending definitions nearly every trade and occupation in the country, were necessarily incomplete and experimental. Exceptions and modifications were authorised which might possibly be requisite, rather than upon proof that they were indispensable, so that, by the time the last of these several Acts had received the Royal Assent, there was a perfect chaos of regulations—all good in themselves when enacted—all having a direct purpose, which most of the trades had outlived, and which required constant care and consideration to prevent an application of them which would have imperilled that impartiality and that uniformity of administration which are absolutely essential to secure harmonious and cheerful co-operation.

996. It was assigned to a Royal Commission, in the latter part of the year 1875, to take all these statutes under review, to consider their various enactments, modifications, and exceptions, to take such evidence as they thought requisite, and then to submit a proposition for bringing into harmony the incongruous mass of provisions which encumbered the statute book. The Commissioners set to work with the utmost activity, and took evidence upon all the points submitted to them, both in London and in various manufacturing localities in England, Scotland, and Ireland, and in February, 1876, their Report, with a volume of evidence, was laid before Parliament. The Report dealt exhaustively with the question; it traced clearly and distinctly the course of legislation, and the causes of the differences of regulations in different trades; it pointed out wherein some differences might cease, and others be mitigated, and, by a series of resolutions laid down the groundwork for the consolidation of the various statutes.

997. The groundwork thus laid down is, in its main features, the groundwork of the Act of 1878. That Act deals with three main classes of works:—

(*a.*) Textile factories.
(*b.*) Non-textile factories.
(*c.*) Workshops.

The definition of a textile factory remains the same as that of a "factory" under the former Acts, viz., an establishment in which cotton, wool, and certain other substances, are operated upon by the aid of steam or water power. And the regulations affecting textile factories continue the same as before as to hours of work and meals, and the education of children, lime-washing, holidays, &c. In one or two particulars, moreover, the precise enactments of the old Factory Acts have been varied and made applicable to non-textile factories. [§ 997.]

The term "non-textile factory" is applied to the occupations expressly included in the Acts of 1864 and 1867, whether using power or not. The term also includes all unnamed occupations, in which power is used. This definition releases from the special factory regulations all such occupations in which no "power" was used, as were factories under the Act of 1867, by reason of 50 persons being employed. The works which were expressly included in the Acts of 1864 and 1867, and are, therefore, non-textile factories, are the following:—

(*a.*) Earthenware works.
(*b.*) Lucifer match works.
(*c.*) Cartridge works.
(*d.*) Percussion caps works.
(*e.*) Paper staining works.
(*f.*) Fustian cutting works.
(*g.*) Blast furnaces.
(*h.*) Copper works.
(*i.*) Iron mills.
(*j.*) Foundries.
(*k.*) Machinery works.
(*l.*) Metal works.
(*m.*) India rubber or gutta-percha works.
(*n.*) Paper mills.
(*o.*) Glass works.
(*p.*) Tobacco works.
(*q.*) Letter-press printing works.
(*r.*) Bookbinding works.

998. All the unnamed occupations in which no "power" is used are defined to be workshops.

999. The above definitions appear to mark very clearly the course of factory legislation. The first principle was that, where power was used, and where the large majority of persons employed were women and children, labour required regulation, sanitary conditions demanded supervision, and education must be made compulsory. What are now called the textile factories came within this category.

1000. Then other occupations came under review, in which the proportion of women and children employed was not so large as in "textile factories," in some of which the labour was not so hard, and, in others of which the attention and strain in waiting upon the moving power was not so continued or so uninterrupted. In these, the limits of the hours of work have been somewhat relaxed, but the great principles of sanitary conditions and education of the young are as rigidly enforced as in textile factories. Such are the non-textile factories.

1001. Finally, it was decided to extend the Acts to other manufacturing establishments. These were those in which no "power" was used, and which are now called workshops. They are divided into three classes:—

(*a.*) Workshops, where women, young persons and children are employed.
(*b.*) Workshops where women are employed, but not young persons and children.
(*c.*) Workshops carried on in a private house, room or place, in which the only persons employed are members of the occupying family.

1002. In workshops of the first class the hours of work and meals and education are as strictly provided for as in factories, but, unless circumstances satisfy the Secretary of State that they are required, registers and certificates of fitness are not compulsory.

1003. In workshops of the second class the actual number of hours of work and meals is the same as in non-textile factories, but there is more elasticity of arrangement.

1004. In workshops of the third class, or "domestic workshops," as they are technically called, the hours of work and meals for children are the same as in non-textile factories but, here again, there is more elasticity of arrangement, and the employment of women is quite unrestricted.

1005. There are specially exempted, even from the regulations applicable to "domestic workshops," the

* The Act of 1864 was, I believe, passed in consequence of the recommendations contained in the First Report of the Children's Employment Commission, 1862.

[§ 1005.] following occupations, when carried on in a dwelling house by the family dwelling therein :—

(*a.*) Straw-plaiting.
(*b.*) Pillow-lace making.
(*c.*) Glove-making.
(*d.*) Other light occupations to which the Secretary of State may extend the exemption.

1006. Flax scutch mills, moreover, in which only women are employed, and employed intermittently, and for not more than six months in the year, are exempted from the regulations as to hours of labour and meals, while any handicraft which is exercised in a dwelling house by the indwelling family at irregular intervals, and does not furnish the whole or the principal means of their livelihood, is exempted altogether.

PART I.—WHAT THE LAW IS.

1007. A factory is any place where manufacturing processes are carried on by the aid of steam or water power, or other mechanical power, and any place where any of the 18 manufacturing processes enumerated above (par. 997) are carried on, whether "power" is used or not.

1008. Every other place where manufacturing processes are carried on is called a workshop.

1009. Workshops situated in private houses, rooms, or places in which the only persons employed are members of the same family dwelling therein are called domestic workshops.

1010. The Factory Acts apply to factories irrespective of the class of hands employed, and workshops where women, young persons, or children are employed.

1011. A woman is a female person over the age of 18.

1012. A young person is a male or female person between the ages of 14 and 18.

1013. A child is a male or female person under the age of 13.

1014. Children of the age of 13 can become young persons on passing a certain educational standard, as fixed by the local authorities, provided that such standard is as high as the fourth in England and Wales and the fifth in Scotland.

1015. The employment of children under 13 is conditional upon the passing of a lower educational standard, fixed for Scotland by Act of Parliament at the third, but left in England to the discretion of the local authorities.

1016. The employment of children under 11 in a factory or workshop is altogether prohibited.

1017. A child or young person may not be employed in the silvering of mirrors by the mercurial process, or in the making of white lead.

1018. A child or female young person may not be employed in melting or annealing glass.

1019. A female under 16 may not be employed in brickmaking or saltmaking.

1020. A child may not be employed in dry grinding in the metal trades, or where lucifer match dipping is carried on.

1021. Every workshop is to be kept in a cleanly state, free from effluvia, &c., to be well ventilated, and not overcrowded.

1022. The administration of this provision is vested in the local sanitary authorities.

1023. If an inspector under the Factory Acts observe a "nuisance" in a workshop, remediable under the Public Health Acts, or in a factory, remediable under the law relating to health, but not under the Factory Acts, he must report the matter to the local sanitary authority instead of dealing with it himself.

1024. The administration of all the succeeding provisions is vested in the inspectors under the Factory Acts.

1025. Every factory is to be kept in a cleanly state, free from effluvia, &c., to be well ventilated, and not overcrowded.

1026. The inside of every factory is to be washed once in 14 months with lime, or painted in oil or varnished once in seven years, and washed once in 14 months with hot water and soap.

1027. The Secretary of State may exempt from the above provision any class of factory, or part thereof, not requiring it for the purpose of cleanliness.

1028. Bakehouses are to be washed with lime once in six months, or, if painted in oil, with hot water and soap.

1029. A child, young person, or woman shall not be employed in wet spinning, unless means are taken [§ 1029.] to prevent their being wetted, and to prevent the escape of steam.

1030. Where dust is generated by grinding, glazing, or polishing in a factory or workshop, a fan shall be provided to prevent the inhalation of dust.

1031. Every hoist, teagle, steam engine or water wheel, and all mill-gearing and dangerous machinery is to be securely fenced.

1032. The employment of a child in cleaning machinery in motion, and of a child, young person or woman in cleaning mill-gearing in motion, is prohibited.

1033. The employment of any child, young person, or woman between fixed and traversing parts of a self-acting machine is forbidden.

1034. Notice of all fatal accidents in factories or workshops must be sent to the inspector and to the certifying surgeon.

1035. Notice of all accidents in factories caused by machinery moved by power, and being of a sufficiently serious nature to prevent the injured person returning to work for at least five hours on any day during the next three days after the accident, must be sent to the inspector and certifying surgeon.

1036. Notice of all accidents in factories or workshops caused by an unfenced vat or pan, and being of a sufficiently serious nature to prevent the injured person returning to his work for at least five hours on any day during the next three days after the accident, must be sent to the inspector and certifying surgeon.

1037. The certifying surgeon must make a report to the inspector of the nature of the injuries sustained in such cases.

1038. If any person suffer bodily injury from neglect of fence, the occupier of the factory or workshop is liable to a penalty of 100*l.*, which may be applied by the Secretary of State for the benefit of the injured person.

1039. Sufficient means of escape from fire must be provided in every factory.

1040. The Secretary of State may require special rules to be adopted in any factory or workshop where the incidents of employment are specially dangerous.

1041. Except as respects young persons in paper mills, no child, young person, or woman may be employed in a factory or workshop on Sunday; but, if the occupier be of the Jewish religion, and close his factory on Saturday, both before and after sunset, he may employ any Jewish young persons and women on Sunday as if Sunday were Saturday.

1042. Women, young persons and children may be employed only during the statutory periods of employments.

1043. For women and young persons, the statutory period of employment in factories and workshops is ordinarily either between 6 a.m. and 6 p.m. or between 7 a.m. and 7 p.m. including the statutory meal hours mentioned below (par. 1056 *et seq.*)

1044. For women and young persons employed in the works named in Schedule 3, Part I., the period of employment may be between 8 a.m. and 8 p.m.

1045. The Secretary of State may add other establishments to those enumerated in the Schedule.

1046. On Saturday, if work commences at 6 a.m., and if not less than one hour is allowed for meals, all manufacturing processes in textile factories must cease at 1 p.m. and all other work at 1.30 p.m.

1047. On Saturday, if work commences at 6 a.m., and if less than one hour be given for meals, all manufacturing processes in textile factories must cease at 12.30 p.m. and all other work at 1 p.m.

1048. On Saturday, if work commences at 7 p.m., all manufacturing processes in textile factories must cease at 1.30 p.m. and all other processes at 2 p.m.

1049. On Saturday, all work in non-textile factories in workshops must cease at 2 p.m. in all cases, with the following exceptions.

1050. When the period of employment is between 8 a.m. and 8 p.m., or between 9 a.m. and 9 p.m., work in non-textile factories and workshops may continue on Saturday until 4 p.m.

1051. When working in day and night shifts, male young persons may be employed in non-textile factories and in workshops on Saturday for the same period as on other days of the week.

1052. In Turkey red dye works, work may continue on Saturday until 4.30 p.m.

1053. The Secretary of State is authorised under certain circumstances to permit another half-holiday for Saturday in the case of non-textile factories and workshops.

[§ 1054.] 1054. Where the hours of work have not exceeded eight in any one week, they may be extended to eight hours on Saturday in a non-textile factory or workshop.

1055. If the occupier of a factory or workshop be of the Jewish religion, and close his establishment on Saturday until sunset, he may employ young persons and women, but not children, between sunset and 9 p.m. on that day.

1056. All young persons and women employed in textile factories must be given two hours for meals during the period of employment on ordinary days, and at least one of these hours must be given before 3 p.m.

1057. All young persons and women employed in non-textile factories and in workshops must be given one hour and a half for meals during the period of employment, and at least one hour before 3 p.m.

1058. No young persons or women may be employed in a textile factory for more than 4½ hours, or in a non-textile factory or a workshop for more than five hours without an interval of half-an-hour, except in the case of the establishments named in Schedule 3, Part 7, of the Act of 1878, and those placed in the same category by order of the Secretary of State.

1059. In all factories, other than those named in Schedule 3, Part 2, of the Act of 1878, all children, young persons, and women are to have their meal-times at the same periods of the day.

1060. In all factories other than those named in the said part of the said Schedule, a child, young person, or woman shall not remain in any room where a manufacturing process is being carried on, or be employed during a meal-time.

1061. Meals are not to be taken in certain parts of glassworks, lucifer match works, and earthenware works.

1062. The Secretary of State has power to prohibit meals being taken in places injurious to health.

1063. Children may be employed in factories or workshops only in morning and afternoon shifts, or in alternate whole day shifts.

1064. Otherwise, the ordinary period of employment for children coincides with that of young persons and women.

1065. But in no case may a child be employed after 8 p.m.

1066. If children are employed in morning and afternoon shifts, the morning set must cease work at the commencement of the dinner hour or 1 p.m., whichever is the earliest, and the afternoon set may begin at the end of the dinner hour or at 1 p.m., whichever is earliest.

1067. In non-textile factories and workshops, if children are employed in morning and afternoon shifts, the morning shift must end and the afternoon shift may begin at the same times on Saturdays as on other days.

1068. In textile factories a child may not be employed on Saturday in two successive weeks, nor on Saturday in any week, if on any other day in the week he has worked more than five hours and a half.

1069. In non-textile factories and in workshops a child may not be employed in two successive weeks in a morning shift, or in two successive weeks in an afternoon shift.

1070. Children employed in alternate whole day shifts may work as young persons, but they must always have at least two hours for meals, must not work on two successive days, or on the same days in two successive weeks.

1071. No child may be employed for more than four-and-a-half hours in textile factories not mentioned in Schedule 3, Part 2, or five hours in the textile factories mentioned in that Schedule, or in non-textile factories and in workshops, without an interval of half an hour.

1072. Every child, young person, and woman employed in a factory or workshop shall be allowed the following holidays:—Christmas Day, and either Good Friday, or the next public holiday under the Holidays' Extension Act, 1875; but, in Scotland, other days may be substituted for Christmas Day and Good Friday, and, in Ireland, the 17th of March or Easter Tuesday may be substituted for Good Friday.

1073. In a factory or workshop where both employer and employed are all Jews, any two Bank Holidays may be substituted for Christmas Day and Good Friday.

1074. In addition to these whole holidays, during no part of which may children, young persons and women be employed, there must be eight half-holidays, or four extra whole holidays, of which one-half must be given between March 15th and October 1st.

[§ 1075.] 1075. A half holiday shall comprise one half of the period of employment on some other day than Saturday.

1076. Notice of holidays must be fixed up in the factories and workshops.

1077. The Secretary of State is authorised to permit the holidays under certain conditions to be given to different sets on different days.

1078. Male young persons working in day and night shifts need not have the eight half-holidays.

1079. The parent of every child employed in a factory or workshop shall cause such child to attend a recognised efficient school for one school attendance on each day of every week during any part of which he may be employed.

1080. A child employed on alternate days must attend school for two school attendances on each alternate day.

1081. Attendance at school must be made between 8 p.m. and 6 p.m.

1082. A child is not required to attend schools on Saturdays, or on any holiday or half-holiday in pursuance of this Act.

1083. When there is not a certified efficient school within 2 miles of the child's residence, the child may attend some other school, temporarily approved by an inspector.

1084. A child who has failed to attend school regularly cannot be employed the following week, unless the deficient attendances be made up.

1085. The occupier shall procure certificates from a schoolmaster of the school attendances of the children employed in his factory or workshop, and keep such certificates for two months, and produce the same to the inspector.

1086. The school managers may apply in writing to the said occupier to pay the school fees, not exceeding 3*d.* per week, or one-twelfth of the wages of a child, which the occupier may deduct from the wages of the child.

1087. When a child of thirteen has obtained a certificate of proficiency, either of having passed the prescribed standard, or of having attended school the prescribed number of attendances, he is deemed to be a young person.

1088. A person under 16 shall not be employed in a factory for more than seven, or, if the certifying surgeon resides more than three miles from the factory, 13 working days, unless the occupier has obtained a certificate in the prescribed form, of the fitness of such person for employment.

1089. The Secretary of State may require similar certificates to be obtained in workshops.

1090. The occupier of a workshop may require the certifying surgeon to grant certificates as if his workshop were a factory.

1091. A certificate of fitness shall not be given unless a certificate of birth be produced, or other proof of real age.

1092. When an inspector considers any person under 16 unfit to work in a factory, he may give notice to the occupiers, and the person shall not be employed more than seven days, unless pronounced by the certifying surgeon to be fit for work.

1093. An inspector may annul a certificate of a certifying surgeon, if the certificate of the age of the person named therein was not produced.

1094. When a child becomes a young person, a fresh certificate of fitness must be obtained.

1095. A certificate of fitness shall be granted only on personal examination.

1096. The same certificate of fitness may be valid for all the factories in the occupation of the same occupier in the district of the same certifying surgeon.

1097. A certifying surgeon shall examine persons only at the factory where such persons are employed, unless the number of children and young persons is less than five, or unless specially allowed by an inspector.

1098. The certifying surgeons are to be appointed by the inspectors.

1099. The occupier shall pay the certifying surgeon according to a specified scale of fees.

1100. Where there is no certifying surgeon within 3 miles, the poor law medical officer shall act as such.

1101. Male young persons of 16 years of age may be employed in lace factories between 4 a.m. and 10 p.m. under certain conditions.

1102. Male young persons of 16 years of age may be employed in bakehouses between 5 a.m. and 9 p.m. under certain conditions.

[§ 1103.] 1103. If the occupier of a factory or workshop be of the Jewish religion, and keep his factory closed on Saturday, both before and after sunset, he may employ the young persons and women one extra hour on every other week day, but not before 6 a.m. or after 9 p.m.

1104. The Secretary of State may authorise the employment of young persons and women to recover lost time in water mills, at the rate of one hour per day, for not exceeding 96 days in case of drought, and not exceeding 48 days in case of flood.

1105. Where cleanliness, &c., is deficient the Secretary of State may, by order, direct the adoption of special means as a condition of the exceptional employment in any factory or workshop.

1106. Where an exception has been authorised, and it is found to be injurious to health, the Secretary of State may, by order, rescind such authorisation.

1107. Young persons and women may be employed for 14 hours, including two hours for meals, between 6 a.m. and 8 p.m., or between 8 a.m. and 10 p.m., in the works named in Schedule 3, Part 3, for not more than five days in a week, and 48 in a year, and in the works named in Schedule 3, Part 5, for 96 days in a year.

1108. The Secretary of State is authorised to extend these provisions to other factories and workshops under certain conditions.

1109. If a process be incomplete at the end of the period of employment in the works named in Schedule 3, Part 4, children, young persons, and women may be employed for 30 minutes beyond the period of employment, provided that the hours of work do not exceed the hours of work allowed by law.

1110. The Secretary of State is authorised to extend these provisions under certain conditions.

1111. Young persons and women may be employed, so far as is necessary to prevent damage from spontaneous combustion, in Turkey-red dyeing, and from atmospheric influence in open air bleaching.

1112. Male young persons may be employed on day and night shifts in the factories named in Schedule 3, Part 6.

1113. The Secretary of State is authorised to permit the employment of male young persons under 16 years of age, in night shifts.

1114. Male young persons of 16 years of age may be employed at night in any printing office in which the process of printing newspapers is carried on, on not more than two nights in a week.

1115. Male young persons may be employed in glass works according to the accustomed hours of the works under certain conditions.

1116. The Secretary of State may authorise the employment of male young persons of 16 years of age as adult males in bakehouses.

1117. There are to be hung up in every factory and workshop notices of the times of work and meals, an abstract of the Act, and the names of inspectors and certifying surgeons. Also, a clock by which the hours of work are regulated.

1118. Notices of special exceptions are to be hung up, and overtime worked under a special exception is to be entered in a register.

1119. A register of young persons under 16 years of age is to be kept in every factory, with details as prescribed by the Secretary of State, and extracts from this register are to be sent to the inspector when required.

1120. The Secretary of State may require similar registers to be kept in workshops.

1121. The hours of work are to be regulated by a public clock in all factories and workshops.

1122. Any person found in a factory while machinery is in motion, or while a manufacturing process is carried on, is deemed to be employed unless the contrary is proved.

1123. The occupier of every newly opened factory or workshop is to send notice of the fact to the inspector within a month.

1124. Inspectors of weights and measures are authorised to examine all instruments used for checking wages, &c., in factories and workshops.

1125. The following are the special provisions governing workshops conducted on the system of not employing children and young persons:—(*a.*) The period of employment shall be for a specified period of 12 hours, between 6 a.m. and 10 p.m., and eight hours between 6 a.m. and 4 p.m. on Saturdays. (*b.*) There shall be allowed to each woman for meals and absence from work, one hour and a half between such periods of employment, except on Saturday, when any interval not less than half an hour shall suffice.

[§ 1126.] 1126. The only regulations which apply to domestic workshops are the following:—

(*a.*) The period of employment for a young person shall be between 6 a.m. and 9 p.m. on ordinary days, and on Saturdays between 6 a.m. and 4 p.m.

(*b.*) There shall be allowed to each young person between such periods of employment, four hours and a half, except on Saturday, and, on Saturday, two hours and a half.

(*c.*) The period of employment for a child shall be between 6 a.m. and 1 p.m. or between 1 p.m. and 8 p.m., or 4 p.m. on Saturdays.

(*d.*) A child shall be employed in morning and afternoon sets changing every week.

(*e.*) The parent of a child must cause his child to attend school.

(*f.*) A child shall attend school daily for one school attendance.

(*g.*) A child shall not be employed for more than five hours without an interval of half an hour.

(*h.*) No child or young persons shall work on Sunday.

(*i.*) No overtime shall on any account be worked.

1127. The enactments respecting inspection, legal proceedings, fines, definition of terms, &c., apply both to workshops conducted on the system of not employing young persons and children, and, with the exception of the maximum amount of the fines, to domestic workshops.

1128. The labour of women in domestic workshops is unrestricted.

1129. In flax scutch mills, in which women only are employed intermittently, and for not more than six months in the course of the year, their labour is entirely unrestricted, but the mills are subject to the sanitary regulations, and those relating to the fencing of machinery, &c.

1130. The occupations of straw-plaiting, pillow-lace making, glove-making, and the manufacture of light articles, where the labour is exercised at irregular intervals, and does not furnish the principal means of living to the family exercising them in a private house, are entirely exempted from the provisions of the Factory Acts.

PART II.—HOW THE LAW WORKS.

1131. Most of the evidence dealing with the general operation of the Factory Acts was given before the witnesses had experienced the effect of the changes made by the Act of 1891. The following précis of the Annual Report of Her Majesty's Chief Inspector for 1892 may, therefore, prove of interest.

1132. The provisions of the Act of 1891 established an important division of duties in connexion with workshop inspection. To the local authority has now been delegated the enforcement of sanitary regulations in all workshops, and though too much importance cannot be placed on the advantages which would arise from harmonious working between the factory inspectors and the local authorities, such co-operation is very far from being universal.

1133. Until recently, the inadequate number of Her Majesty's Inspectors hindered an effective enforcement of the law, but the addition of inspectors' assistants promises to make a material improvement in this respect, especially in the metropolis.

1134. With respect to the fencing of machinery it is universally acknowledged that the insertion of the words "dangerous parts of the machinery" in section five, sub-section three, is one of the most valuable and important amendments in the 1891 Act, the benefit of which to the operatives is very great.

1135. The enactment requiring the notice as to overtime to be hung up in the workroom has been a most useful check on illegal overtime, as it enables the workpeople to see for themselves how many days have been reported to the inspector of factories.

1136. The order for lists of out-workers to be kept by the occupiers of factories or workshops in various occupations has been readily complied with; but warehousemen or others who only give out the materials, but do nothing in the way of manufacture on their premises not being included, leaves a gap which may be worthy of consideration in future legislation. These

[§ 1136.] lists, moreover, should be specially useful to the sanitary authorities.

1137. Mr. T. Birtwistle has been appointed to administer section 24 of the Act of 1891, which requires particulars to be supplied to the worker in cases of payment by the piece, and his reports show that there has been a general compliance with the requirement, which has proved of great benefit to the operatives.

1138. Much good has been accomplished under the Cotton Cloth Factories Act, 1889.

1139. There is a very general demand for the effective registration of all workshops, and the present regulations do not appear to meet the case. The Act of 1891, which by section 26 requires a notice of the opening of every workshop, as well as of every factory, to be sent to an inspector, was a great advance in the right direction, but the Chief Inspector does not think it will accomplish the object in view without a system of certificates or licenses granted by the local authorities. Recommendations for better registration come from all quarters, trade unions, masters' associations, and inspectors all agreeing with the following remarks in paragraph 9 of Lord Dunraven's draft report:—"In "times of great pressure of work, houses of considerable eminence seem to be occasionally driven "to the employment of sweaters. In compulsory "registration and the rigid enforcement of sanitary "regulations can alone be found the means of "effectually coping with an evil which may at any "time set an epidemic raging in the heart of London "or one of our great towns."

1140. Compulsory registration of new workshops is now part of the law, but the Chief Inspector thinks that the main points aimed at would be better secured by a provision requiring all workshops to be licensed or certificated. The granting of such certificates, he considers, could be easily carried out by the appointment of a registrar by every local authority.

1141. In fact, the recommendations of the Chief Inspector are as follows:—

1st. That the occupiers of workshops should be required to obtain a certificate or license from a registrar to be appointed by the local authority, for which they should pay a small fee.

2nd. That, within three months from the granting of the certificate, the workshops should be visited by the sanitary authority, and the license signed by him to show the date of his visit.

3rd. That if the workshop should be found not to be in such a sanitary condition as is required by the Public Health Act, the medical officer of health should be empowered to take proceedings at once against the owner of the property.

4th. That not only occupiers of factories and workshops, but all contractors and shopkeepers who employ out-workers should keep lists of such out-workers, and be only permitted to employ those who occupy licensed factories or workshops. If the name of any out-worker be omitted from the list, or if any person be employed as an out-worker whose workplace is unlicensed, the employer of such out-worker should be liable to a substantial penalty.

5th. That the sanitary officer of the local authority should report to the medical officer of health such places as employ females, young persons, or children, whose hours of labour are restricted by the Factory Acts, and that lists of such places only should be forwarded to Her Majesty's Chief Inspector of Factories, Home Office.

1142. The Chief Inspector's report concludes as follows:—"Public opinion has become, and is becoming "growingly sensitive to the evils against which State "inspection is aimed, and proportionately vigilant and "exacting as to the manner in which it is worked. "It would not be possible for the present staff of "inspectors of factories to visit the lower class "of workshops and trace the out-workers. With "proper supervision a lower class of officers would be "sufficient to fulfil the duties, which are now left "to the Factory Department, since the sanitation "of all workshops has been transferred to the local "authorities."

1143. "The arrangements" recently "made for the "appointment of such a class of inspectors in "London, who will be under the superintendence "of Mr. Lakeman, and who will examine the lists of "out-workers and visit where necessary, will, I believe, "meet the requirements of the case, so far as London "is concerned, and I hope in my next report, that "I shall be able to show that the results justify the [§ 1143.] "system being carried further than in London and "Glasgow, to which centres the work is at present "to be mainly confined."

1144. "The proposed appointment of two women "inspectors, one in London and one in Glasgow, who "are to be peripatetic, will enable me to send a female "inspector to make special inquiries amongst female "operatives, where from the nature of the complaint, "it may be considered desirable, and I hope good "results will follow from the change."

1145. "It is of great importance that there should be "recognised permanent public offices in the principal "centres of industry. The exhibition of notices at "the post office and police stations, the publication "of orders in the Board of Trade Journal, and, above "all, the valuable assistance of the public press have "contributed to greater publicity, and the establishment of the proposed offices, in different centres for "Her Majesty's Superintending Inspectors, will aid in "making the provisions of the Act and the sources "whence information can be obtained more generally "known."

1146. "The increase of the population, especially in "the large centres of industry, naturally leads to a "proportionate increase in the number of factories "and workshops, and the staff which was able to some "extent to meet the requirements of the smaller "number is insufficient to deal adequately with the "increased demands made upon it; consequently, to "enable the department properly to fulfil its duties, "it will be needful to make from time to time an "addition to the number of inspectors. The addition "to the staff made during the year have strengthened "the department, but I think it will be necessary to "add to the number of assistants who would aid "Her Majesty's Inspector of Factories in clerical work "(which now occupies too much of their time) as well "as in the general visitation of the workshops, including "those of the out-workers."

PART III. — WHAT THE LAW OUGHT TO BE IN THE OPINION OF THE WITNESSES.

1147. Both the factory inspectors and the men's representatives were almost unanimous in thinking that the factory inspectors should have the same power in regard to the sanitary condition of workshops as they possess in regard to that of factories.

1148. The representatives of the textile workers desired the use of shuttle guards to be enforced, and Mr. E. P. Arnold Forster, representing the Bradford Chamber of Commerce, said that he considered it to be a protection which the workpeople might justly demand.

1149. Several witnesses desired the hours within which machinery should be stopped and cleaned to be specified in the text of the Act.

1150. The representatives of the Sheffield Federated Trades' Council wished to re-enact section 3 of the Act of 1878, repealed in 1891, relating to the use of faulty grindstones, but without the seven days' notice proviso.

1151. The same witnesses desired the inspectors to have power to deal with the faulty construction of workshops.

1152. The representatives of the Boilermakers' and Iron Shipbuilders' Society desired the jurisdiction of the factory inspectors to be extended to all spars and planks used in the construction of staging, and to all ropes and chains upon which staging is suspended.

1153. The representatives of the Boilermakers' and Iron Shipbuilders' Society wished all users of boilers to be obliged to have them inspected by certificated boilermakers appointed for the purpose.

1154. Several witnesses desired Union officials to be given independent legal standing at inquests.

1155. It was also proposed to give the relatives of the deceased, in addition to the right of attending inquests and examining witnesses, either personally or by counsel, the further right, at present conferred only upon a majority of the fellow workmen, of appointing Union officials, instead of solicitors, to represent them.

[§ 1156.] 1156. Some witnesses, moreover, desired to confine the composition of coroners' juries to persons connected with the trade in which the fatal accident occurred.

1157. All the Scotch Trade Union representatives wished to render unnecessary the fifth sub-section of section 33 of the Act of 1891 by a complete assimilation of Scotch to English law on the subject of inquests into the causes of fatal accidents.

1158. Several of the representatives of the textile workers wished to enforce the issue to weavers of cards containing full particulars as to their rate of payment.

1159. On the other hand, the employers considered the law on the point to be too strict already, and desired it to be made more elastic.

1160. A large number of witnesses, especially from the nail-making and other similar industries, desired to compel employers to find accommodation for all their workpeople instead of sending work to domestic workshops.

1161. Some witnesses, however, would prefer to bring every place where more than one person worked, even if no wages passed, under the definition of a workshop proper.

1162. Mr. C. Booth proposed to make owners of houses used for industrial purposes responsible for the observance of the Factory Acts on the part of their tenants.

1163. Mr. Sidney Webb further proposed to make every giver-out of work responsible for the observance of the Factory Acts in whatever place he allowed the work to be done.

1164. The employers wished a similar latitude to be allowed for steaming in factories under the Cotton Cloth Factories Act as for overtime.

1165. The representatives of the red-lead workers wished the Act of 1883, relating to white-lead factories to apply to their industry also.

1166. The representatives of the Amalgamated Society of Bakers proposed—

(*a.*) To prohibit underground bakeries.
(*b.*) To cause all bakeries to be registered.
(*c.*) To cause all bakeries to be built inside of white glazed brick.

1167. A large number of witnesses, notably Mr. J. Bignold, the Factory Inspector for Devon and Cornwall, wished overtime to be abolished unconditionally.

1168. Several of the employers, on the other hand, desired greater elasticity in the law relating to this matter, and this opinion was endorsed by Mr. J. Henderson, the Superintending Inspector for Scotland and the North of England.

1169. Some of the Trade Union representatives were in favour of one or other of the following proposals:—

(*a.*) To make the medical examination of factory children periodical.
(*b.*) To let one registration and one certificate hold good permanently.
(*c.*) To require medical certificates in workshops as well as in factories.
(*d.*) To make the certifying surgeons as thoroughly independent of the millowners as the inspectors.
(*e.*) To appoint a medical inspector to judge whether women are capable of performing the tasks allotted to them without physical injury.

1170. A large number of witnesses, notably Dr. Tatham, a medical officer of health, wished the period during which young mothers are excluded from factories, to be extended, and a similar period of exclusion to be specified before, as well as after confinement.

[§ 1171.] 1171. The Nailmakers' Trade Unions desired female nailmakers to be forbidden to point nails larger than half an inch.

1172. Mr. Shortt and Mr. Tees, representing the barmen, desired to bring public-houses under the Factory Acts, and prohibit the employment of barmaids.

1173. The tailors' representatives wished employers to be compelled to provide separate rooms for male and female workers in the trade.

1174. The representatives of the Amalgamated Society of Engineers desired the definition of "young person" to apply to all persons under the age of 21.

1175. Several proposals as to the employment of children were made by Trade Union, school teachers' and employers' representatives, as their respective interests required. They were as follows:—

(*a.*) To raise the age of half-timers to 12.
(*b.*) To raise the age of half-timers to 13, and so to abolish the half-time system.
(*c.*) To fix an educational standard instead of an age as the qualification for half-time work.
(*d.*) To let such standard be the fourth.
(*e.*) To let age and attendances be the sole qualification for half-time work, and to let such attendances be the aggregate for a school career instead of so many per annum.
(*f.*) To make the methods by which half-timers attend school more uniform.
(*g.*) To provide separate schools for half-timers.
(*h.*) To prohibit the employment of children under 13 before 8.0 a.m. between October 1st and March 31st.
(*i.*) To prohibit all child labour under 14.
(*j.*) To allow children to enter the mills at 10 years of age.
(*k.*) To raise the age of full-timers.
(*l.*) To fix an educational standard instead of an age for full-timers.
(*m.*) To let the said standard be the sixth.
(*n.*) To let age and attendances be the sole qualification for full-timers, and to let the attendances be an aggregate for a school career, instead of so many per annum.

1176. It was proposed to extend the Acts in the following manner:—

(*a.*) To warehouses.
(*b.*) To outdoor work in shipyards.

1177. Mr. J. Rawlinson, representing the North-east Lancashire Cotton Manufacturers' Association, wished penalties under the Act to be imposed upon the actual wrongdoer, and not necessarily on the employer.

1178. Mr. Murray Davis, representing the Irish National Federation of Bakers, desired the administration of the Factory Acts in small Irish provincial towns to be vested in the police.

1179. Several witnesses, including Mr. J. Henderson, the Superintending Factory Inspector for Scotland and the North of England, desired the Factory Department to be made independent of the Home Office.

1180. Mrs. Amie Hicks, representing the London Ropemakers' Union, desired employers under the Factory Acts to be obliged to furnish balance-sheets to the Board of Trade, to be used as indicating what wages they could afford to pay.

1181. The employers all desired the administration of the Acts to be made more elastic.

1182. The men's representatives all desired it to be made more strict; and, with this end in view, proposed a large increase in the staff of inspectors, especially by the addition of working men and women in sympathy with the Trade Unions.

GEOFFREY DRAGE,
Secretary.

APPENDIX IX.

THE ADMINISTRATION OF CERTAIN IMPORTANT INDUSTRIAL ENACTMENTS.

The Secretary was directed to draw up, for the use of the Commission, a Tabular Statement under the following heads with regard to certain Acts of Parliament, and the Administrative Orders relating to the said Acts, showing what Authority is in each case competent.

[*The Acts relating to Arbitration and Conciliation and Employers' Liability, the Artisans and Labourers' Dwellings Act, the Housing of the Working Classes Act, the Trade Union Act, the Bank Holiday Act, etc. have not been dealt with, as they do not fall under the heads in question, which were selected in order to show the variety of Departments exercising authority with regard to the enforcement of certain important industrial enactments.*]

TABLE OF CONTENTS.

The Factory and Workshop Act, 1891.	27			
The Factory and Workshop Act, 1878.	83	Penalties for employing children, young persons, or women, contrary to the provisions of the Act.	„	—
The Factory and Workshop Act, 1891.	28			

[§ 1183. A. 3.] 1183. PROTECTION OF CHILDREN, YOUNG PERSONS, AND WOMEN—*continued.* [§ 1183. A. 3.]

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.
The Factory and Workshop Act, 1878.	84	Penalty on parents for allowing improper employment of children and young persons contrary to the Act, or neglecting to cause children to attend school.	Home Department.	—
		B.—MINING.		
The Coal Mines Regulation Act, 1887 (50 & 51 Vict. c. 58).	4	Employment in any mine below ground of boys under 12 years of age and of girls and women prohibited.	„	—
Ditto -	5	Hours of employment of boys over 12 below ground limited to 54 in any one week, or more than 10 hours in any one day.	„	—
Ditto -	6	Regulations as to periods of employment of boys below ground. (*See also* limitation of the hours of labour.)	„	—
Ditto -	7	Regulations as to employment of boys, girls, and women above ground. (*See also* under limitation of the hours of labour.)	„	Power of the Secretary of State to exempt mines from certain provisions of the Act; these powers are more or less frequently exercised, but as the exemptions are local in character they are not published in this table.
Ditto -	8	Registration of boys, girls, and women employed in connexion with the mine.	„	—
Ditto -	75	Interpretation of "boy," "girl," and "woman."	„	—
The Metalliferous Mines Regulation Act, 1872 (35 & 36 Vict. c. 77).	4	Employment in any mine of whatever description (other than a mine to which the Coal Mines Regulation Act, 1872, applies) of boys under 12, and girls and women of any age prohibited.	„	—
Ditto -	5	Hours of employment of boys of the age of 12 and under 13, and of the age of 13 and under 16, below ground, limited to 54 hours per week, or more than 10 hours in any one day. (*See also* under the "limitation of the hours of labour.")	„	—
Ditto	6	Registration to be kept by owner, &c. of boys and male young persons employed in mines.	„	—
Ditto	7	Prohibition of employment of young persons under 18 in connexion with engines.	„	—
Ditto -	8	Penalty for employment of women, girls, young persons, or boys contrary to the Act.	„	—
		C.—MISCELLANEOUS.		
The Public Health (London) Act, 1891 (54 & 55 Vict. c. 76).	27	Medical officer of health to give notice to inspector of factories respecting child or woman in workshop in London.	„	—
The Factory and Workshop Act, 1883 (46 & 47 Vict. c. 53).	17 (2)	Duty of the medical officer of health to give notice to factory inspector of the district of the employment of any child, young person, or woman in any retail bakehouse.	—	—
The Shop Hours Act, 1892 (55 & 56 Vict. c. 62).	Whole Act	Regulation of hours of young persons in shops and warehouses not being employed as members of and servants in a family.	—	—

[§ 1183. C.] 1183. PROTECTION OF CHILDREN, YOUNG PERSONS, AND WOMEN—*continued.* [§ 1183. C.]

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.
The Children Dangerous Performance Act, 1879 (42 & 43 Vict. c. 34).	Whole Act	Penalty, not exceeding 10*l.*, for employment of any child under 14 in dangerous performances, and compensation for accident to any child under such age.	—	—
The Prevention of Cruelty to, and Protection of, Children Act, 1889 (52 & 53 Vict. c. 44).	3 and 13	Power for local authority to make byelaws, subject to confirmation by the Secretary of State, appointing places of safety, extending or restricting the hours during which the employment of children in streets or in licensed premises are prohibited. Provision also for byelaws for Scotland and Ireland.	Local Authority.	The byelaws issued and confirmed are excluded on account of their local character.
The Merchant Shipping (Fishing Boats) Act, 1883 (46 & 47 Vict. c. 41).	4	Apprenticeship to sea-fishing service. Agreements with boys under 16 to be entered into before a Superintendent of a Mercantile Marine Office, and with consent of the nearest relations or guardians.	Board of Trade.	—
Ditto -	6	Prohibition to boys under 13 entering into indenture of apprenticeship to the sea fishing service.	„	—
The Canal Boats Act, 1879 (40 & 41 Vict. c. 60).	6	Education of children dwelling on board canal boats.	Local Government Board and Education Department.	—
The Canal Boats Act, 1884 (47 & 48 Vict. c. 75).	5	Power given to the Education Department to make regulations as to school certificates.	„	—

1184. DIRECTIONS RELATING TO THE METHOD OF PAYMENT OF WAGES.

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.
		(a.) *Manner and Place of Payment.*		
The Master and Servant (Truck Payment) Act, 1831 (1 & 2 Will. IV. c. 37).	I.	In the contracts for the hiring of artificers, the wages must be paid in the current coin of the realm.	Home Department (in so far as it applies to the duties of inspectors in factories and mines).	—
	II.	And must not contain any stipulations as to the manner in which the wages shall be expended.		
	III.	That the entire amount of the wages in any of the trades (enumerated) must be paid to the workmen in coin, any payment in goods declared illegal.		
	IV.	That artificers in any of the trades enumerated may recover wages, if not paid in the current coin.		
	V.	In an action brought to recover wages, no set-off shall be allowed for goods supplied by the employer, or by any shop in which the employer is interested.		
	VI.	No employer shall have any action against his artificer for goods supplied to him on account of wages.		
	VII.	If the artificer, or his wife, or children, become chargeable to the parish, the overseers may recover any wages earned within the three preceding months and not paid in cash.		
The Truck Amendment Act, 1887 (50 & 51 Vict. c. 46).	13	Duty of inspectors of factories and inspectors of mines to enforce the provisions of the principal Act so far as respects factories, mines, &c.	„	—
	2	Application of the above Act to workmen as employed in the Employers' and Workmen Act, 1875, section 10.		
	3	Illegal for the employer to withhold advance or make any deduction in respect of such advances in wages on account of poundage, discount, or interest, &c.		
	4	Contracts with servants in husbandry for giving food, drink, cottage, &c., in addition to money wages excepted.		
	5	Orders for goods supplied to workmen by employer or agent as a deduction for wages, illegal.		
	6	Contracts with workmen as to spending wages at any particular shop, &c., illegal. No employer or agent, moreover, shall dismiss any workmen from his employment for such reasons.		

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.
The Truck Amendment Act, 1887 (50 & 51 Vict. c. 46.)	7	Deduction for education allowed.	Home Department (in so far as it applies to the duties of inspectors in factories and mines).	—
	8	No deduction from workmen's wages allowed for sharpening or repairing tools, except by agreement, not forming part of the condition of hiring.		
	9	Audit of deductions from wages for the education of children, medicine, medical attendance, tools by workmen's auditors provided for.		
	10	Articles made by a person at his own home or otherwise without the employment of any person, except a member of his own family, must be paid in cash and not by way of barter.		Power of Her Majesty by Order in Council to suspend this section in any county or place. This power has (Jan. 1st, 1893) not been exercised.
The Master and Servant (Ireland) Act, 1846 (9 Vict. c. 2).	20	Provides that contractors shall pay labourers in money and not in goods, and at intervals of not more than four days.	—	—
The Excise Duty upon Licenses for the Sale of Liquors, &c. (Ireland) Act, 1815 (55 Geo. III. c. 19).	64	Penalty (enacted) on persons agreeing to pay servants or workmen partly in money and partly in spirits.	—	—
	65	Penalty on persons paying servants or workmen in public-houses.		
The Payment of Wages in Public Houses Prohibition Act, 1883.	3	No wages shall be paid to any workmen at or within any public-house, beer-shop, &c., except such as are paid by the occupier to workmen, *bonâ fide* employed by him	—	—
		(b.) *Recovery at Law.*		
The Preferential Payments in Bankruptcy Act, 1888 (51 & 52 Vict. c. 62).	1	(*b.*) All wages and salaries of any clerk or servant in respect of services rendered to the bankrupt or the company during four months before the date of the receiving order or winding-up not exceeding 50*l.* to be paid in full, and in priority to all other debts (except Queen's and local taxes). (*c.*) And the same also to apply to all wages of labourers and workmen not exceeding 25*l.* for services rendered within two months of the receiving order or winding-up. Wages of labourers in husbandry contracted to be paid in a lump sum at the end of the year of hiring shall be payable in priority in respect of the whole of such sum, or a part thereof, as the court may decide.	Board of Trade (through Official Receivers, who are also officers of the High Court and the County Courts).	—
	Rule 220 of Bankruptcy Rules, 1886 and 1890.	Provision for collecting proofs to be made for workmen's wages, so as to avoid expense. Such proofs are also exempt from stamp duty.	,,	Order as to fees of 18th December 1890, Table A.
The Preferential Payments in Bankruptcy (Ireland) Act, 1889 (52 & 53 Vict. c. 60).	4	Provisions same as 51 & 52 Vict. c. 62 (above) - -	—	—
The Bankruptcy (Scotland) Law Amendment Act, 1875 (38 & 39 Vict. c. 26).	3	All wages of clerks, shopmen, and servants shall be entitled to the same privilege as the wages of domestic servants to the extent not exceeding four months wages, prior to the date of sequestration not exceeding the sum of 50*l.*, and the wages of workmen to the extent not exceeding two months.	—	—
The Employers and Workmen Act, 1875 (38 & 39 Vict. c. 90).	3	Power of the County Court to order payment of money as to wages, &c. set off, and recission of contract, and taking security.	—	—
The Recovery of Small Debts (Scotland) Act (1 Vict. c. 41).	—	All wages of labourers and manufacturers shall, so far as necessary for their subsistence be deemed alimentary, and, in like manner as servants' fees and other elementary funds, not liable to arrestment.	—	—

[§ 1184 (b).] 1184. DIRECTIONS RELATING TO THE METHOD OF PAYMENT OF WAGES—*continued.* [§ 1184 (b).]

Authority now in force.	Section of Act.	Subject of Section.	Exercise of Authority.	
			Administrative Authority.	References to Orders in Council, Rules and Regulations.
The Summary Jurisdiction (Ireland) Act, 1851 (14 & 15 Vict. c. 12).	16	Lawful for any justices to hear and determine any dispute concerning any sums which may be due for wages, &c., and may order payment of sums due. . . and award compensation to servants, &c. as compensation (not exceeding 40*s.*) for loss of time in recovering wages . . . and make order for recovery of wages in cases of absence of their masters.	—	—
		(c.) *Attachment of Wages.*		
The Wages Attachment Abolition Act, 1870 (33 & 34 Vict. c. 30).	1	No order for the attachment of the wages of any servant, labourer, or workman shall be made by the judge of any court of record or inferior court, after the passing of this Act.	—	—
The Wages Arrestment Limitation (Scotland) Act, 1870 (33 & 34 Vict. c. 63).	1	Wages of all labourers, artificers, &c. shall cease to be liable to arrestment for debts contracted subsequent to the passing of this Act.	—	—
	2	But if the amount of wages exceeds 20*s.* per week, any surplus above that amount shall still be liable to arrestment as before the passing of this Act.		
	3	And also such debts incurred before the passing of the Act above the like amount.		
The Act to Amend the Law of Arrestment of Wages in Scotland, 1845 (8 & 9 Vict. c. 39).	Whole Act.	Arrestment of wages not competent on dependence of action.	—	—
		(d.) *Particular Industries.*		
The Hosiery Manufacture (Wages) Act, 1874 (37 & 38 Vict. c. 48).	1	The full and extra amount of all wages in the hosiery manufacture to be paid in current coin of the realm without any stoppages whatsoever, except for bad and disputed workmanship.	-	—
	2	All contracts to stop wages and for frame rents and charges declared illegal.		
	5	No action, &c. shall be allowed between employer and artificer for any deduction or stoppage of wages.		
The Coal Mines Regulation Act, 1887 (50 & 51 Vict. c. 58).	10	Payment of school fees (not exceeding 2*d.* per week) may be deducted from the wages payable to the girl or boy.	Home Department.	—
	11	Prohibition of payment of wages at public-houses, beer-shops, &c.		
	12	(1.) Payment of wages to persons employed in mines according to the actual weight gotten by men allowed; deductions to be determined by an agent of the manager and a check-weigher appointed by the men.		
The Metalliferous Mines Regulation Act, 1872 (35 & 36 Vict. c. 77).	9	Prohibition of payment of wages at public-houses, beer-shops, &c.	,,	—
The Administration of Estates Act, 1705 (4 & 5 Anne c. 19).	16	All suits and actions in the Court of Admiralty for seamen's wages, which shall become due after the first day of Trinity term, shall be commenced and sued within six years next after the cause of such suits or actions shall accrue, and not after.	—	—
The Mercantile Law Amendment Act, 1856 (19 & 20 Vict. c. 97).	10	Absence beyond the seas . . . not a disability to any action or suit with respect to the period of limitation.	—	—
The Merchant Shipping Act, 1854 (17 & 18 Vict. c. 104).	149	Agreements, in a form sanctioned by the Board of Trade, to be made with all seamen, except those serving on coasting vessels of less than 80 tons, as to the amount of wages they are to receive, and as to advances and allotments.	Board of Trade.	—
	167	Any seaman, who has signed an agreement and is afterwards discharged before the commencement of the voyage, or before one month's wages are earned, without fault on his part, shall be entitled, in addition to any wages he may have earned, to due compensation for the damage thereby caused to him.	,,	
	168, 169	Agreement shall state the amounts and times of the payments of allotments of seamen's wages. The allotment notes shall be in the form sanctioned by the Board of Trade, which may be sued on summarily by certain persons and under certain conditions.	,,	

[§ 1184 (d).] **1184. Directions relating to the Method of Payment of Wages—*continued.*** [§ 1184 (d).]

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.
The Merchant Shipping Act, 1854 (17 & 18 Vict. c. 104).	170	Discharge and payment of wages of seamen on all British foreign-going ships who are discharged in the United Kingdom, shall be made before shipping master; and every master shall deliver to the seamen or shipping master a full and true account, in a form sanctioned by the Board of Trade, of all wages and deductions.	Board of Trade.	—
	173–74	Settlement of wages. Settlement by shipping masters of questions of wages.	,,	
	175	On settlement of wages a release, in a form sanctioned by Board of Trade, is to be signed before and attested by shipping master.	,,	
	177–80	Facilities shall, if the Board of Trade so direct, be given for remittances of the wages of seamen, and seamen's savings banks may be established.	,,	
		Legal rights to wages:		
	181	A seaman's rights to wages and provisions are to commence at the time he begins work, as specified in agreement for his commencement of work or presence on board ship.	,,	
	182	Any agreement of a seaman to give up rights to wages are to be void.	,,	
	183	No right to wages shall be dependent on the earning of freight.	,,	
	185	On the termination of his services owing to illness or wreck, before the period contemplated in the agreement, a seaman shall be entitled to wages for the time of service prior to such termination.	,,	
	186	Seamen's wages are not to accrue during refusal to work or imprisonment.	,,	
	187	Period within which wages are to be paid.	,,	
		Mode of recovering wages:		
	188	Seamen may sue for wages not exceeding 50*l.* in a summary manner.	,,	
	189	Suits for the recovery of wages in superior courts restricted to the sum of 50*l.* and over, except under special circumstances.	,,	
	190	No seaman engaged for a voyage to terminate in the United Kingdom can sue for wages abroad, except in cases of due discharge or of danger to his life.	,,	
	191	Masters are to have same remedies for recovery of wages as seamen.	,,	
		Relief to seamen's families out of poor rates:		
	192–3	Relief given to the families of seamen during their absence is chargeable on a certain proportion of their wages on their return.	,,	
		Wages and effects of deceased seamen:		
	194, 195	Masters are to take charge of or sell effects of seamen dying on board ships engaged in voyages to terminate in the United Kingdom, and enter the same and wages due in the official log, and hand the money and effects either to consul or shipping master, with full accounts, who shall remit them to the Board of Trade.	,,	
	199	If the wages and property of a deceased seaman do not exceed the value of 50*l.* the same may be paid over without probate or letters of administration to the persons entitled.	,,	
	202	All wages and effects of deceased seamen and apprentices received by the Board of Trade, to which no claim is substantiated within six years, shall be dealt with at the discretion of the said Board.	,,	
		Leaving seamen abroad:		
	209	Where wages are due to seamen left abroad on the ground of illness, the master must deliver a full and true account of them to the proper authority.	,,	
	228	Deduction of expenses of seamen's illness and burial from wages.	,,	
The Merchant Shipping Act, 1867 (30 & 31 Vict. c. 124).	7	Expenses of illness of seamen.	,,	—
	8	Forfeiture of wages of seamen during illness caused by own wilful act and default.	,,	—
The County Courts Admiralty Jurisdiction Act, 1868 (31 & 32 Vict. c. 71).	3	Any County Court having Admiralty jurisdiction shall have power to determine . . . . . (2.) Any claim . . . . . for wages not exceeding 150*l.*	,,	—

[§ 1184 (d).] **1184. Directions relating to the Method of Payment of Wages—*continued*.** [§ 1484 (d).]

Authority now in force.	Section of Act.	Subject of Section.	Exercise of Authority.	
			Administrative Authority.	References to Orders in Council, Rules and Regulations.
The Merchant Seamen (Payment of Wages and Rating) Act, 1880.	3	Agreement shall, if the seaman desires, stipulate for allotment of any part not exceeding half of his wages, either to his relations or a savings bank. (Amendment of section 169 of the Merchant Shipping Act, 1854.)	Board of Trade.	——
	4 (1)	In the case of foreign-going ships, the owner or master of a ship shall pay to each seaman at the end of the engagement 2*l.*, or a quarter of the balance of wages due to him, whichever is least, and the remainder within two clear days after he leaves the ship.		
	4 (2)	And may also deliver the account of wages to the seaman himself at or before the time of leaving the ship.		
	4 (3)	If the seaman consents, the final settlement may be left to the superintendent of a Mercantile Marine Office.		
	4 (4)	Wages will run in favour of the seamen in cases of unreasonable delay until the settlement, provided the delay was not caused by the act or default of the seamen.		
	4 (5)	In disputes on wages not exceeding 5*l.* the superintendent may adjudicate.		
The Merchant Shipping (Fishing Boats) Act, 1883 (46 & 47 Vict. c. 41).	15	Stipulations in the agreement regarding wages.	,,	——
	24	*Wages and discharge of seamen in fishing boats and in sea-fishing service.* Skipper, not less than four hours before discharge to deliver accounts of wages, and deductions therefrom, in a form sanctioned by the Board of Trade to the seaman.		
	25	When paid by share in catch, seamen to have inspection of owner's accounts and books relating to catch.		
	26	Skipper to give seamen on discharge or on payment of wages, certificate of discharge.		
	27	Seamen discharged before the commencement of the voyage or during the voyage without fault to recover compensation in same manner as wages.		
	29, 30, 35	Forfeitures from wages.	,,	——
	34	How wages are to accrue.		
	46	Superintendent of Mercantile Marine Office to decide disputes as to wages, &c.		
The Merchant Shipping (Fishing Boats) Act, 1887 (50 Vict. c. 4).	4	The provisions relating to sections 24 and 25 of the last named Act extended to skippers of fishing boats.	,,	——
	6	Owners are to render accounts of profits to crews paid by share.		
The Merchant Shipping Act, 1889 (52 & 53 Vict. c. 46).	1	Every master is to have the same remedies for recovery of disbursements made on account of the ship as for recovery of wages.	,,	——
	2 (1)	Any agreement with a seaman under section 149 of the Merchant Shipping Act, 1854, may contain a stipulation for payment to or on behalf of the seaman, conditionally on his going to sea, in pursuance of the agreement, of a sum not exceeding the amount of one month's wages, payable to the seaman under the agreement.		
	2 (2)	Save as authorised by this section, any agreement by or on behalf of the employer of a seaman for payment of money conditionally on his going to sea from any port in the United Kingdom, shall be void, and no money paid in satisfaction or in respect of any such agreement shall be deducted from the seaman's wages, &c.		
	2 (4)	Section 2 of the Merchant Seamen (Payment of Wages and Rating) Act, 1880, is repealed.		
	4	Where a seaman has agreed with the master of a British ship for payment of his wages in British sterling or any other money, payment shall, notwithstanding anything in the agreement, if made in any other currency than that agreed upon, be made at the rate of exchange for the time being current at the place where the payment is made.

Notice by Secretary of State as to the alteration of mines inspection districts, "London Gazette," 10th May 1892, p. 2709.

[§ 1185 (2).] **1185. Special Provisions for the Protection of Miners and Men Employed in the Railway Service—*continued*.** [§ 1185 (2).]

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.
		(2.) Men employed in the Railway Service.		
The Employers' Liability Act, 1880 (43 & 44 Vict. c. 42).	8	For the purposes of this Act the expression "workman," means a railway servant and any person to whom the Employers and Workmen Act, 1875, applies.	Home Department.	—
The Railway Regulation Act, 1893 (56 & 57 Vict. c. 29).	1 sub-sec. 1	Board of Trade shall enquire into representations of railway servants as to excessive hours of labour.	Board of Trade	—
—	1 sub-sec. 2	Board of Trade may demand schedules of working time to be drawn up, and forwarded to it for approval.	„	—
—	sub-sec. 3, 4	If railway company refuse to comply, the Board of Trade may refer the matter to the Railway and Canal Commission, who shall have a similar power to order schedules of time to be submitted, a penaly of 100*l.* per day during which the default continues.	„	—

1186. Provisions for the Protection of Health in Factories and Workshops, &c.

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.
The Public Health Act, 1875 (38 & 39 Vict. c. 55), as amended by Factory and Workshop Act, 1891.	91 Sub-sec. 6	Any workshop or workplace not kept in a cleanly state or not ventilated in such a manner as to render harmless as far as practicable any gases, vapours, dust, or other impurities generated in the course of the work carried on therein, that are a nuisance or injurious to health, or so overcrowded while work is carried on as to be dangerous or injurious to the health of those employed therein, shall be deemed to be a nuisance liable to be dealt with summarily.	Local Sanitary Authority.	—
The Factory and Workshop Act, 1878, amended by section 3 of Act of 1891.	3	Every factory is to be kept in a cleanly state, free from effluvia, &c., to be well ventilated, and not to be overcrowded.	Home Department.	—
Ditto	4	If an Inspector of factories observe a nuisance in a factory or workshop which is punishable or remediable under the law relating to Public Health, but not under the Factory Acts, he must report the matter to the local sanitary authority.	„	—
Ditto	33	Every factory must be *limewashed* once in 14 months unless painted in oil once in seven years, when it must be *washed* once in every 14 months. The Secretary of State, however, may, exempt from this provision any class of factory, or part thereof not requiring it for the purpose of cleanliness.	„	Order of Secretary of State granting exemptions, "London Gazette," 22nd Dec. 1882, p. 6524.
Ditto	34	Bakehouses are to be *limewashed* once in six months, or where painted in oil, to be *washed* once in six months.	Home Department as regards wholesale bakeries. Local Sanitary Authority as regards retail bakeries.	—
Ditto (Amended by section 17 of the Factory and Workshop Act of 1883.)	35	Restrictions on use of rooms in bakehouses for sleeping places.	Local Sanitary Authority.	—
The Public Health (London) Act (54 & 55 Vict. c. 76).	26	Enforcement of conditions relating to cleanliness, ventilation, &c., in bakehouses, which are workshops.	„	—
The Factory and Workshop Act, 1878.	36	Where dust is generated by grinding, glazing, or polishing in factories or workshops, an inspector may direct a fan or other proper means to be provided for preventing the inhalation of dust.	Home Department.	—
Ditto	37	A child, young person, or woman, shall not be employed in wet spinning, unless means are taken to prevent their being wetted, and to prevent the escape of steam.	„	—

[§ 1186.] 1186. PROVISIONS FOR THE PROTECTION OF HEALTH IN FACTORIES AND WORKSHOPS, &c.—*continued.* [§ 1186.]

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.

The Factory and Workshop Act, 1878 (41 & 42 Vict. c. 16).	44	(*a.*) Power of working male young persons above 16 in lace factories in the part of a textile factory in which a machine is moved by steam, &c. between 4 a.m. and 10 p.m., provided an allowance of nine hours is made for meals and absence from work. (*b.*) When such young person is employed on any day before the beginning of the ordinary period of employment in the factory, he shall not be employed on the same day after the end of that period. (*c.*) And when employed after the end of the ordinary period of employment he shall not be employed next morning before the beginning of the ordinary period of employment.	,,	——
Ditto	45	In non-textile factories and workshops male young persons above 16 may be employed in bakehouses between 5 a.m. and 9 p.m., provided— (*a*) an allowance of five hours is made for meals and absence from work between the above hours. (*b*) as to continuity of employment. (*c*) Same as (*b*) and (*c*) above.	,,	——
Ditto	46	Substitution by Secretary of State of another half-holiday for Saturday.	,,	——
Ditto	47	Employment of young persons and women in Turkey red dyeing on Saturday up to 4.30 p.m. allowed.	,,	——
Ditto	48	Continuous employment of children, young persons, and women in certain cases.	,,	——
Ditto	49	Giving half-holidays and holidays on different days to different sets of children, young persons, and women.	,,	——
Ditto	50	Employment of young persons and women by Jewish occupiers of factories or workshops.	,,	——
Ditto	51	Employment of Jews by Jews on Sunday in factories or workshops.	,,	——
Ditto	52	*Meal Hours.*—Exception as to meal times being simultaneous, and as to employment or remaining in room where manufacturing process is carried on during meal times.	,,	——
Ditto	53	*Overtime.*—Power to employ in factories and workshops young persons and women for 14 hours a day, provided two hours are reserved for meals, half an hour of which shall be after 5 p.m., and provided that employment shall not be for more than 5 days in any one week, nor more than 48 days in any 12 months.	,,	——

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.
The Factory and Workshop Act, 1878 (41 & 42 Vict. c. 16.)	54	Power to employ for half an hour after end of work where process is in an incomplete state.	Home Department.	—
Ditto - -	56	Employment of women for 14 hours a day to preserve perishable articles, provided two hours is allowed for meals, of which half an hour shall be after 5 p.m.; and provided that employment shall not be for more than five days in any one week, nor for more than 96 days in any one year.	„	—
Ditto -	57	Exception for factories driven by water power - - -	„	—
Ditto - -	58	*Nightwork:* Employment of male young persons at night not to exceed 12 consecutive hours; that meal hours are observed, and that such young person has not been employed during any part of the 12 hours preceding and not employed on more than six nights, or in the case of blast furnaces or paper mills, seven nights in any two weeks.	„	—
Ditto - -	59	Employment in certain letter-press printing works of male young persons of 16 not to exceed two nights in a week.	„	—
Ditto - -	60	Employment of male young persons in glass works not to exceed 60 hours in any one week; periods of employment not to exceed— 14 hours in four separate hours per week. 12 „ „ five „ „ „ 10 „ „ six „ „ „ or any less number of hours in the accustomed number of separate turns per week, so that such number of turns do not exceed nine. Such young person shall not work in any turn without an interval of time not less than one full turn. During each turn, same times for meals are to be allowed as in any other non-textile factory or workshop.	„	—
Ditto -	61	Special exception for domestic factories and workshops and certain other workshops from certain provisions of the Act.	„	—
Ditto -	62	Exceptions for certain descriptions of flax scutch mills from certain provisions of the Act.	„	—
The Coal Mines Regulation Act, 1887 (50 & 51 Vict. c. 58).	5	A boy of or above the age of 12 shall not be employed in any mine below ground for more than 54 hours in any one week, nor more than 10 hours in any one day.	„	—
	6	An interval of not less than eight hours between the period of employment on Friday and the period of employment on the following Saturday shall be allowed, and in other cases of not less than 12 hours between each period of employment.	„	—
Ditto -	7	With respect to boys, girls, and women above ground— (1.) No boy or girl under 12 years of age shall be so employed. (2.) No boy or girl under 13 years of age shall be so employed. (*a*) for more than six days in any one week; or, (*b*) if employed for more than three days in any one week for more than six hours in any one day; or, (*c*) in any other case, for more than 10 hours, in any one day. (3.) No boy or girl of or above the age of 13, and no woman shall be so employed for more than 54 hours in any one week, or more than 10 hours in any one day. (4.) No boy, girl, or woman shall be so employed between the hours of nine at night and five on the following morning, nor on Sunday, nor after two o'clock on Saturday afternoon. (5.) An interval of not less than eight hours shall be allowed between the termination of employment on Friday and the commencement of employment on the following Saturday, and in other cases of not less than 12 hours between the termination of employment on one day and the commencement of the next employment.	„	—

[§ 1187.]

1187. Limitation of the Hours of Labour—*continued.*

[§ 1187.]

Authority now in force.	Section of Act.	Subject of Section.	Administrative Authority.	Exercise of Authority. References to Orders in Council, Rules and Regulations.
The Coal Mines Regulation Act, 1887, (50 & 51 Vict. c. 58).		(6.) No boy, girl, or woman shall be employed continuously for more than five hours without an interval of at least half an hour for a meal, nor for more than eight hours on any one day, with an interval or intervals for meals, amounting altogether to not less than one hour and a half. The provisions of this section as to the employment of boys, girls, and women after two o'clock on Saturday afternoon, shall not apply in the case of any mine in Ireland, so long as it is exempted by order of a Secretary of a State.	Home Department.	—— These powers are more or less frequently exercised, but as the exemptions are local in their character, they are not published here.
The Shop Hours Act, 1892 (55 & 56 Vict. c. 62).	3	(1.) No young person shall be employed in or about a shop for a longer period than 74 hours, including meal times, in any one week. (2.) No young person shall to the knowledge of his employer, be employed on or about a shop having been previously in the same day employed in any factory or workshop . . . . . for the number of hours permitted by the Factory and Workshop Act, 1878, or for any longer period than will together with the time during which he has been so previously employed, complete such number of hours.	Local Authority.	——
Ditto -	4	Notice of the number of hours permitted by the Act, must be exhibited by the employer in a conspicuous place.		
The Railway Regulation Act, 1893 (56 & 57 Vict. c. 29).	1	If it appears to the Board of Trade, by or on behalf of the servants or any class of servants of a railway company, that there is a reasonable ground of complaint with respect to the hours of labour of those servants. . . . . The Board of Trade shall order the company to submit to them. . . . . such a schedule of time for the duty of the servants, as will bring the actual hours of work within reasonable limits.	Board of Trade.	——

1188. Establishment of a Legal Day of Rest.

Authority.	Section of the Act.	Particulars of Act or Section.
The Observance of Sunday Act, 1448–9 (27 Henry VI. c. 5).	Whole Act	Forfeiture of goods shown in fairs or markets upon Sundays, Good Fridays, and principal feasts, with certain exceptions.
